THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE- BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS.

FIELD CODING FOR J7.1I				(SHEET 1)
DFI	DUI	DUI/DI NAME	DI BIT CODE	DUI/DI EXPLANATION
1606	002	ACTION, DATA UPDATE REQUEST -----		DESCRIBES THE DATA THAT IS BEING REQUESTED BY THE TRANSMISSION OF A DATA UPDATE REQUEST MESSAGE.
		DATA UPDATE REQUEST BY REQUEST INDICATOR	0	THE UNIT SPECIFIED IN THE ADDRESSEE TN IS REQUESTED TO TRANSMIT ALL DATA SPECIFIED BY THE REQUEST INDICATORS.
		DATA UPDATE REQUEST BY TRACK NUMBER	1	UNIT(S) SPECIFIED IN THE ADDRESSEE TN ARE REQUESTED TO TRANSMIT CURRENT DATA APPLICABLE TO THE REFERENCE TN.
		BALLISTIC MISSILE UPDATE REQUEST	2	THE UNIT SPECIFIED IN THE ADDRESSEE TN IS REQUESTED TO TRANSMIT DATA APPLICABLE TO THE REFERENCE TN.
		UNDEFINED	3 THROUGH 7	
769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK.
				THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

1606	006	ACTION, IFF/SIF MANAGEMENT -----		USED TO DESCRIBE THE ACTION REQUIRED BY THE SOURCE TRACK NUMBER TO MANAGE IFF/SIF DATA ON THE INTERFACE. THE UNIT SPECIFIED IN THE SOURCE TN DIRECTS THAT IFF/SIF DATA (MODES I, II, III, AND/OR IV) FOR THE TRACK SPECIFIED IN THE REFERENCE TN WILL NOT BE REPORTED ON THE INTERFACE UNTIL UPDATED IFF/SIF DATA IS RE-ENTERED (MANUALLY, AUTOMATICALLY OR FROM DATA LINK REPORTS).
		CLEAR IFF/SIF	0	
		IFF/SIF DIFFERENCE REPORT	1	THE UNIT SPECIFIED IN THE SOURCE TN HAS DIFFERENT IFF/SIF DATA (MODE I, II, III, AND/OR IV) FOR THE TRACK SPECIFIED IN THE REFERENCE TN. THE MODE FIELDS MUST BE SET TO THE UNIT'S LOCAL IFF/SIF DATA.
		IFF/SIF UPDATE REQUEST	2	THE UNIT SPECIFIED IN THE SOURCE TN IS REQUESTING UPDATED IFF/SIF DATA (MODE I, II, III, AND/OR IV) FOR THE TRACK SPECIFIED IN THE REFERENCE TN FROM THE OTHER UNITS IN THE INTERFACE.

769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

1793	001	UNIT DESIGNATOR ----- STANDARD ASCII CODE		
769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

J10.2 TRANSMIT/RECEIVE RULES

TITLE: Engagement Status Message

TRANSMIT RULES

1. The J10.2 Engagement Status message shall be transmitted twice at an RRN = 6 (12 seconds, 8-20 second interval) by the C² JU reporting its own or non IU's engagement status, or the controlling C² JU:

a. Upon initiation or change of engagement status of the Reference TN (JU or nonJU).

b. Upon accepting the handover of an engaged platform. In this case, the controlling unit must initially transmit the same engagement status as the previous controlling unit, since acceptance of an engaged handover constitutes acceptance of the engagement mission (see paragraph 4.11.3.2.2d(4)).

c. When requested by another JU in a J7.1 Data Update Request message.

d. When data contained in the J10.2I Engagement Status initial word or the J10.2C1 Additional Engagement Status continuation word(s) changes before the J10.2 message is transmitted twice, the original J10.2 message shall be terminated and reinitiated with the new data.

2. When used to report multiple engagement status, the J10.2I word shall be followed by one or two J10.2C1 words. Additional initial words and/or initial/continuation words sequences may be transmitted without changing previously reported engagements, so that no limit will exist on the total number of engagements that may be reported for a weapon system.

3. The redundancy of initial transmissions and periodic update rates of the J10.2 message shall be dependent upon the Weapons Engagement Status (WES) values being reported, as shown in Table J10-3 (except as stated in Rule 1 above).

J10.2 TRANSMIT/RECEIVE RULES (Continued)

TRANSMIT RULES (Continued)

4. The WES field set to value 5 is transmitted until sensor contact is cancelled/lost to preclude reengagement and weapons expenditure.

5. When reporting time of predicted intercept, the J10.2I word shall be followed by the J10.2C2 word.

a. The J10.2C2 word shall not be used when reporting multiple engagements using the J10.2C1 Additional Engagement Status word.

b. Regardless of the periodic rate, a J10.2I/J10.2C2 word sequence shall be reported one final time 10 (8-12) seconds prior to time of predicted intercept.

c. When reporting single or multiple weapon commitments against a single target, a single J10.2I/J10.2C2 word sequence shall be used to report the time of predicted intercept of each Friendly Weapon TN committed against the target. However, the engagement status shall reflect the status of the Reference TN, not the status of individual commitments. No limit exists on the total number of Friendly Weapon TN commitments that may be reported for a given Reference TN. The engagement status of the Reference TN shall be the highest priority WES value of the individual commitments determined from the following WES values in order of priority from highest to lowest with one being highest.

(1) Effective (value 5)

(2) Firing (value 4)

(3) Partially Effective (value 6)

(4) Engagement Broken (value 8)

6. When a WES value of 5 or 6 is being reported with a time of actual intercept of the Target TN, a J10.2I/J10.2C2 word sequence shall be

J10.2 TRANSMIT/RECEIVE RULES (Continued)

TRANSMIT RULES (Continued)

transmitted with the Friendly Weapon TN field in the J10.2C2 word set to No Statement.

7. Multiple engagements shall be reported as a contiguous list in a sequence of J10.2I and J10.2C1 words. An Engagement Status shall not be transmitted in a J10.2C1 word unless the preceding J10.2I is reporting a TN, Target and there is at least another Engagement Status to report. An Engagement Status shall not be transmitted in a second J10.2C1 word unless the preceding J10.2C1 word is reporting both TN, target A and TN, target B and there is at least another Engagement Status to report. When an engagement in a multiple engagement report terminates, the subsequent report shall reorder the remaining engagements as illustrated in Table J10-2.

J10.3 TRANSMIT/RECEIVE RULES

TITLE: Handover Message

TRANSMIT RULES

1. The J10.3 Handover message shall be transmitted initially only by operator action.
2. When transmitting an original J10.3 message with the Request for Assume Control field set to Handover Request or the Request Cancellation field set to value 1, the R/C field shall be set to 0, i.e., R/C required. The J10.3 message shall not be transmitted with the R/C field set to 1, i.e., R/C not required.
3. An original J10.3 message (R/C = 0) requires transmission of a J10.3I/J10.3E0 word sequence. The J10.3C1 word is only transmitted in an original message when the Request for Assume Control field is set to value 2 except for transmit rule 6 below concerning remotely piloted vehicles. The J10.3 message transmitted with the R/C field set to Cannot Comply (CANTCO) or Cannot Process (CANTPRO) will respond with a word sequence identical to that to which the response is being made.
4. A J10.3 message transmitted with the R/C field set to Will Comply (WILCO) requires transmission of a J10.3I/J10.3E0/J10.3C1 word sequence, except in response to a J10.3 message with the Request for Assume Control field set to value 0 or 1 and the Cancellation Indicator field set to value 1.
5. Transmission of the J10.3 message with the various R/C values set shall be in accordance with the procedures specified in paragraph 4.1.7.
6. The transmit/receive rules for the handover of remotely piloted vehicles are TBD.

RECEIVE RULES

There are no receive rules specified for this message.

TITLE: Controlling Unit Report Message

TRANSMIT RULES

1. The J10.5 Controlling Unit Report message shall be transmitted 3 times initially at an RRN = 6 (12 seconds, 8-20 second interval) when a C² JU assumes control of a track. Thereafter, it is updated periodically at an RRN = 3 (96 seconds, 72-120 second interval).
2. When data change, the J10.5 message shall be sent 3 times at the same RRN as an initial transmission, beginning at the next transmission opportunity. The JU then resumes updating in accordance with rule 1.
3. When requested by another JU in a J7.1 (ACT = 1) Data Update Request message on a specific TN, the J10.5 message shall be sent 3 times at the same RRN as an initial transmission, beginning at the next transmission opportunity. The JU then resumes updating in accordance with rule 1.
4. When a C² JU terminates control of a track, the J10.5 message shall be sent 3 times at the same RRN as an initial transmission. It is not updated.

769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

2. The J10.6 message shall be transmitted once and shall be updated thereafter at an RRN = 3 (96 seconds, 72-120 second interval).
3. The J10.6 message shall have been preceded by track/point messages on the subjects of the pairing.
4. The J10.6 message with the Pairing Action field value equal to 15 shall terminate a pairing. Pairings may be terminated only by the JU responsible for reporting the pairing. The J10.6 message with the Pairing Action value equal to 15 shall be transmitted 3 times at an RRN = 6 (12 seconds, 8-20 second interval). When the JU transmitting the J10.6 message with the terminate pairing value set establishes a new pairing on the Reference TN and Objective TN, it may discontinue the terminate pairing action transmission prior to completion.

J12.0 TRANSMIT/RECEIVE RULES

TITLE: Mission Assignment Message

TRANSMIT RULES

1. The J12.0 Mission Assignment message shall be transmitted by any C² JU responsible for controlling tactical weapon systems. The J12.0 may also be transmitted, optionally, by nonC² JUs to make assignments to other nonC² JUs. Table J12-2 indicates word sequences, R/C values, and message priorities for each Mission Assignment Discrete value. The orders and word sequences associated with each Mission Assignment Discrete value show how the J12.0 message shall be used to support the various tactical missions. Transmission of the J12.0 message with the various R/C values set shall be in accordance with procedures specified in paragraph 4.1.7.

2. Mission assignments against a target that is a line of bearing (LOB) are transmitted in a J12.0I/J12.0C1/J12.0C3/J12.0C5 word sequence. J12.0C7 word may be added if elevation angle data are available. The Point Type, 1 field shall be set to value 15, Origin of Bearing, and the Latitude and Longitude fields will specify that location in the J12.0C3 word. The Latitude and Longitude fields in the J12.0C1 word shall be set to No Statement.

3. An Additional J12.0I/J12.0C3/J12.0C6 or, if transmitted by a nonC² JU in order to report an Index Number, a J12.0I/J12.0C1/J12.0C3/J12.0C6 word sequence with the MAD field set to value 43, Related Mission Data, may be transmitted to provide supplemental ASO mission information. The Point Type, 1 field shall be set to other than value 1, Target, or 15, Origin of Bearing. The Related 3 TN or Related IN fields shall be the Objective TN or IN from the related J12.0.

RECEIVE RULES

NOTES

- 1 The initial transmission of the message by a C² JU requires the receipt/compliance field set to the value in the column. NonC² JUs on ASO missions may transmit R/C values of 0, 1, or 5.
- 2 The message priority is as indicated in the column. P = Priority, R = Routine.
- 3 The J12.6 Target Sorting Message may be used by the C² unit to update the position specified in the J12.0 message. Such transmissions may be initiated automatically or by operator action.
- 4 The J12.0C2 word shall be transmitted if Course, Speed, or Altitude about the Objective TN is available.
- 5 The J12.0C5 word shall be transmitted when the target is a Line of Bearing (J12.0C3 word, Point Type, 1 value 15).

FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

J12.2 MESSAGE SUMMARY

PURPOSE

The J12.2 Precision Aircraft Direction Message is used by controlling units for operations requiring precise control positioning of mission aircraft (for example, ground directed release of ordnance, automatic carrier landing operations, air cargo delivery, and Remotely Piloted Vehicle operations).

J12.2 TRANSMIT/RECEIVE RULES

TITLE: Precision Aircraft Direction Message

TRANSMIT RULES

1. The J12.2 Precision Aircraft Direction message shall be transmitted by any C² JU responsible for precise control positioning of tactical mission aircraft.
2. Because the functions of aircraft control that will use this message will require a dedicated channel and network participation group, there is no need for a priority scheme for transmitting the Precision Aircraft Direction Discrete field values.
3. The unique characteristics of precision aircraft direction require continuous data updates up to a maximum rate of RRN = 13 (93.75 milliseconds). Because the Precision Aircraft Direction Discrete field value is included in all J12.2 messages, the discrete value last specified will be transmitted until replaced with a new discrete value.

RECEIVE RULES

There are no receive rules specified for this message.

J12.3 TRANSMIT/RECEIVE RULES

TITLE: Flight Path Message

TRANSMIT RULES

1. The J12.3 Flight Path message shall be transmitted by C² JUs to aircraft and/or missiles under their control to provide information on multiple flight paths. Aircraft shall reply using the J12.3 message with the Waypoint Action/Descriptor field set to the appropriate value.
2. C² JUs shall transmit the J12.3I/J12.3E0 word sequence with the Waypoint Action/Descriptor field set to the values 0-6 only.
3. Controlled aircraft shall transmit the J12.3I Flight Path initial word with the Waypoint Action/Descriptor field set to values 8-11 only.
4. A series of waypoints shall be transmitted sequentially in numerical order. The complete series shall be transmitted two times at an RRN = 3 (1.6 minutes, 1.2-2 minute interval) unless an aircraft responds with all points received. If an aircraft responds with one or more lost point messages, only the lost point segments will be retransmitted.
5. Controlled aircraft shall transmit the J12.3I word with the Waypoint Action/Descriptor field set to value 8 when all points have been received. When a controlled aircraft receives a J12.3I word containing the Waypoint Action/Descriptor field set to 3, Last Point in Series, and there are missing sequence numbers in the series received, the controlled aircraft shall transmit a J12.3I word with the Waypoint Action/Descriptor field set to 9, Lost Point, and the sequence number for each missing point. The controlling unit shall retransmit the missing points in a new series of J12.3I/J12.3E0 word sequences. This procedure shall be fully automatic and require no operator action.
6. J12.3 messages for all of the Waypoint Action/Descriptor field values other than 0 shall be transmitted two times at an RRN = 6 (12 seconds, 8-20 second interval).

J12.4 MESSAGE SUMMARY

PURPOSE

The J12.4 Controlling Unit Change Message is used to provide new control agency information to an aircraft prior to handoff to the new control agency. It is also used by a tactical aircraft to initiate control procedures with a new controlling unit or to effect a change of controlling unit in response to a controlling unit change order or by a C² JU to initiate control by own unit.

J12.4 TRANSMIT/RECEIVE RULES

TITLE: Controlling Unit Change Message

TRANSMIT RULES

1. The J12.4 Controlling Unit Change message shall be transmitted by C² JUs responsible for controlling tactical aircraft and by those tactical aircraft under their control.
2. To initiate or effect a change of controlling unit, a C² JU shall transmit the J12.4I/J12.4E0 word sequence. The Control Change Indicator field in the initial word shall be set to value 0. The R/C field in the J12.4I Controlling Unit Change initial word shall be set to value 0.
3. A tactical aircraft shall transmit a J12.4I message three times at an RRN of 6 (12 seconds, 8-20 second interval) to a new controlling unit either to initiate control procedures with that unit or to effect a change of controlling unit in response to a controlling unit change order. Receipt of a response message shall cause the periodic transmission to cease. The Control Change Indicator field in the initial word shall be set to value 1. The R/C field in the J12.4I word shall be set to value 0.
4. A tactical aircraft that does not know the address of the assigned controlling unit shall transmit a J12.4I message to the Collective Address, 00177, to initiate control procedures. The Control Change Indicator field shall be set to value 1. The R/C field shall be set to value 1. The J12.4I word shall be transmitted periodically at an RRN of 6 (12 seconds, 8-20 second interval) until transmission is terminated by operator action or a J12.4I message with the Control Change Indicator field set to value 0 is received.
5. The C² JU that terminates control shall transmit a J12.4I word with the Control Change Indicator field set to value 2 and the R/C field set to value 0.
6. Transmission of the J12.4 message with the various R/C values set shall be in accordance with procedures specified in paragraph 4.1.7.

J12.5 TRANSMIT/RECEIVE RULES

TITLE: Target/Track Correlation Message

TRANSMIT RULES

1. The J12.5 Target/Track Correlation message shall be transmitted periodically at an RRN = 3 (1.6 minutes, 1.2-2 minute interval) by C² JUs controlling aircraft on tactical control nets.
2. The J12.5E0 Target/Track Correlation extension word shall be transmitted with the J12.5I Target/Track Correlation initial word when more than one correlation exists with a given TN.
3. When any correlation data associated with the Objective TN changes, the complete J12.5 message shall be sent, and the periodic rate update specified in transmit rule 1 shall be reinitiated.
4. If the Objective TN is changed by a dual designation resolution, all correlations will be decorrelated and recorrelated to the new TN. This will require two messages, with the decorrelation message preceding the new correlation message.
5. When the Objective TN is dropped all correlations shall be cancelled with a decorrelation message.
6. When a target with a correlated index number is dropped there is no requirement to transmit this message. If the dropped index number is part of a multiple correlation then the dropped data will be deleted from the next periodic transmission.
7. When the ID/Strength Indicator changes, the J12.5I word shall be transmitted once, and the periodic rate update specified in rule 1 shall be reinitiated.

J12.5 TRANSMIT/RECEIVE RULES (Continued)

RECEIVE RULES

There are no receive rules specified for this message.

769	010	TRACK NUMBER, OBJECTIVE -----		THE TN OF THE OBJECT OF THE ACTION DESCRIBED IN THE MESSAGE. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

J12.6 TRANSMIT/RECEIVE RULES

TITLE: Target Sorting Message

NETWORK PG - TRANSMIT RULES

1. The J12.6 Target Sorting message shall be transmitted periodically by nonC² JUs and may be transmitted periodically by C² JUs responsible for controlling the weapon systems. Tables J12-4.1 through J12-4.6 indicates the required word sequences and periodic update rates for each Status Information Discrete field value.

2. The J12.6 message shall be used for nonC² JUs' radar derived target position reports, and for non-radar derived target position reports when there is a 95% probability that the target is within a 4.4 square data mile area.

3. If the number of targets to be reported is 1, the J12.6C1 word need not be transmitted only to report target strength. If target strength to be reported is greater than one, the J12.6C1 word must be transmitted initially and with each update.

4. The J12.6I and J12.6E0 Target Sorting initial and extension words shall be transmitted in every transmission of the message, except that the J12.6E0 word may be omitted:

a. When reporting a J12.6 (SID = 5) Cancel Sensor Target Report for an uncorrelated target.

b. When reporting a J12.6 (SID = 0) message with the Pointer field set to call the attention of another JU to a geographic location only.

The required word sequences for J12.6 continuation words shall be as specified in Table J12-4.

5. To address a J12.6 message the J12.6C1 word shall be included in the applicable sequence.

J12.6 TRANSMIT/RECEIVE RULES (Continued)

NETWORK PG - TRANSMIT RULES (Continued)

6. To report sensor fusion uncertainty the J12.6C2/J12.6C3 words shall be transmitted periodically in a J12.6I/J12.6E0/J12.6C2/J12.6C3 word sequence. Time in the J12.6C2 word relates to all target data except that the Latitude and Longitude fields shall be extrapolated to the time of transmission.
7. The J12.6C4 word shall be transmitted as follows:
 - a. At the first transmission of the J12.6I word after target identification is initially evaluated.
 - b. Every 8 transmissions of the J12.6I word.
 - c. At the next periodic transmission of the J12.6I word after any data in the J12.6C4 word changes.
8. To transmit sensor management data a J12.6I/J12.6E0/J12.6C5/J12.6C6 word sequence shall be used.
9. To report the end of a target reporting cycle relating to the specific sensor type reported, a J12.6C2 word is included in the applicable word sequence.
10. The J12.6C6 word may be included in any word sequence to report or command weapon and/or sensor system parameters.
11. If a nonC² JU directs a change of engagement with a target to another nonC² JU, then the J12.6C1 word shall be transmitted two times in a J12.6I/J12.6E0/J12.6C1 word sequence.
12. A JU shall transmit a J12.6 message at least once when the Pointer field is set to call the attention of another JU to a sensor target, track, or geographic location. If the Pointer field is set to call the attention of another JU to a specific sensor target or track, a J12.6I/J12.6E0/J12.6C1 word sequence shall be used. If the Pointer field is set to call the

J12.6 TRANSMIT/RECEIVE RULES (Continued)

NETWORK PG - TRANSMIT RULES (Continued)

attention of another JU to only a geographic location, the J12.6E0 word may be omitted from the word sequence.

13. When the results of an IFF interrogation of the target become available, a nonC² JU shall include the J12.6C1 word in the next two successive transmissions of the message reporting that target.

14. If a C² JU implements the capability to report tracks in a J12.6 message for the benefit of nonC² JUs, such a message may include engagement status data relating to units not operating on the C² JU's control NPG. To report engagement status in this manner the following applies:

a. To report engagements, the J12.6C1 Engagement Status continuation word shall be included in the initial report and each subsequent update in a J12.6I/J12.6E0/J12.6C1 word sequence at an RRN of 7 (6 seconds, 3-9 second interval).

b. To report the breaking of an engagement, the J12.6C1 Engagement Status continuation word shall be transmitted two times at an RRN of 7 (6 seconds, 3-9 second interval) in a J12.6I/J12.6E0/J12.6C1 word sequence.

15. If a nonC² JU reports an engagement in a J12.6 message, the SID field shall be used to report the status of the engagement. If the J12.6C1 word is included:

a. When operating on other than Needline PGs, the WES field shall be set to value 0, No Statement.

b. When operating on Needline PGs, the WES field shall be set in accordance with table 4.12-4, or else set to value 0, No Statement.

J12.6 TRANSMIT/RECEIVE RULES (Continued)

NETWORK PG - RECEIVE RULES

There are no receive rules specified for this message, therefore any valid word combination shall be accepted.

NEEDLINE PG - TRANSMIT RULES

1. All transmit rules in Network PG are applicable to Needline PG.
2. The J12.6C7 Kinematic Data 1 continuation word shall be transmitted by a nonC² JU, when vertical velocity and tracking error data are available, in a J12.6I/J12.6E0/J12.6C7 word sequence, periodically with a RRN between 9 (1,5 second, 1-2 second interval) and 6 (12 seconds interval).

NEEDLINE PG - RECEIVE RULES

All receive rules specified for this message to Network PG are applicable to Needline PGs.

769	010	TRACK NUMBER, OBJECTIVE -----		THE TN OF THE OBJECT OF THE ACTION DESCRIBED IN THE MESSAGE. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

		NO STATEMENT	0	
		THE TARGET IS THE LAST TARGET IN AN UPDATE SEQUENCE TO BE TRANSMITTED	1	INDICATES THAT THE TARGET IS THE LAST TARGET TO BE TRANSMITTED IN THE SENDER'S TARGET REPORTING CYCLE. THE NEXT TARGET TO BE TRANSMITTED WILL BE THE BEGINNING OF THE NEXT CYCLE. THIS INDICATES THAT A COMPLETE SET OF TARGETS HAS BEEN TRANSMITTED. THIS PROVIDES THE RECEIVER WITH AN INDICATION THAT ALL TARGETS HELD BY THE SENDING UNIT HAVE BEEN TRANSMITTED.
1681	004	TIME INDICATOR -----		USED IN CONJUNCTION WITH THE MINUTE, SECOND, AND HUNDREDTHS FIELDS TO DESCRIBE THEIR USE FOR TARGETING.
		NO STATEMENT	0	
		TIME OF OBSERVATION	1	THE TIME (MINUTE, SECOND, AND HUNDREDTHS FIELDS COLLECTIVELY) REPRESENTS THE TIME AT WHICH THE TARGET WAS ACTUALLY OBSERVED BY THE REPORTING UNIT. THE TIME IS REFERENCED TO NETWORK TIME.
		TIME OF EXTRAPOLATION	2	THE TIME (MINUTE, SECOND, AND HUNDREDTHS FIELDS COLLECTIVELY) REPRESENTS THE TIME TO WHICH THE REPORTING JU LAST EXTRAPOLATED THE TARGET. THE TIME IS REFERENCED TO NETWORK TIME, AND APPLIES TO ALL PARAMETERS EXCEPT LATITUDE AND LONGITUDE WHICH ARE EXTRAPOLATED TO TIME OF TRANSMISSION.
		TRACK AGE	3	THE TIME (MINUTE, SECOND, AND HUNDREDTHS FIELDS COLLECTIVELY) REPRESENTS THE LENGTH OF TIME THAT HAS PASSED SINCE TARGET WAS LAST EXTRAPOLATED. THIS FIELD VALUE IS ONLY USED WHEN NONE OF THE TARGET DATA IS EXTRAPOLATED BY THE SENDER UP TO THE TIME OF TRANSMISSION OF THE DATA. THIS TIME IS REFERENCED

NOTE 1

VARIANCE CODING

X: real variance value (X = Var XX, Var YY, Var ZZ, Var XY, Var XZ or Var YZ)

|X| : absolute value of X

I(|X|) : logarithmic coding of the variance value

$$I(|X|) = \text{INTEGER} \left((2^8 - 3) \frac{\ln\left(\frac{|X|}{X_{\min}}\right)}{\ln\left(\frac{X_{\max}}{X_{\min}}\right)} \right) + 1$$

with $X_{\min} = 25 \text{ m}^2$ and $X_{\max} = 2294 \cdot 10^6 \text{ m}^2$

$$I(|X|) = \text{INTEGER} \left(13.799 * \ln \left(\frac{|X|}{25} \right) \right) + 1$$

if ($|X|$) < $X_{\min}$ then I (X) = 0
 if ($|X|$) > $X_{\max}$ then I (X) = 254

Cross terms (Var XY, Var XZ, Var YZ) may have a sign, so logarithmic function applies only to the absolute value of X. So a 8 bit code is used to integrate the sign.

if X > 0 then I (X) = I ($|X|$)
 if X < 0 then I (X) = I ($|X|$) + 256

J12.7 TRANSMIT/RECEIVE RULES

TITLE: Target Bearing Message

TRANSMIT RULES

1. The J12.7 Target Bearing message shall be transmitted periodically by nonC² JUs on detection and thereafter not more frequently than an RRN of 8 (3 seconds) as long as the detection continues.
2. The J12.7 message shall not be transmitted unless the originator's Geodetic Position Quality (GPQ) is better than value 8 (5-15,1).
3. Although there is not a J12.7 basic message, the normal word sequence used to report a 2-dimensional detection is J12.7I/J12.7E0/J12.7E1. The time fields in the J12.7E1 word relate to all data including Latitude and Longitude, i.e., data is not extrapolated to time of transmission.
4. The J12.7C2 word shall be transmitted as follows:
 - a. At the first transmission of the J12.7I word after target identification is initially evaluated.
 - b. Every 8 transmissions of the J12.7I word.
 - c. At the next periodic transmission of the J12.7I word after any data in the J12.7C2 word changes.
5. The J12.7C1 and J12.7C2 words may be included in any transmission if data are available. If the J12.7C1 word is transmitted, then both the J12.7E0 and J12.7E1 must be transmitted. The J12.7C2 word may be transmitted in a J12.7I/J12.7C2 word sequence. However, in any transmission, if the J12.7E0 word is omitted, then the J12.7E1 must be omitted as well. When restricted to 3-word message sequences, a J12.7I/J12.7E0/J12.7E1, followed by a J12.7I/J12.7C1/J12.7C2 sequence is used, with the J12.7C2 optional.
6. Any time there is a 95% probability that the calculated position quality of the detection is within 4.4 square data miles, a J12.6 message must also

J12.7 TRANSMIT/RECEIVE RULES (Continued)

be transmitted in accordance with the J12.6 T/R rules. JUs are not required to transmit a J12.7 message on a target when a J12.6 message is being transmitted on that target.

RECEIVE RULES

1. Purging of received data is a system option.
2. Any valid word sequence shall be accepted.

J13.0 TRANSMIT/RECEIVE RULES

TITLE: Airfield Status Message

TRANSMIT RULES

1. The J13.0B Airfield Status Basic message consists of the J13.0I Airfield Status initial word and the J13.0E0 Airfield Status extension word.

2. To report airfield or carrier flight deck status, the J13.0 Airfield Status message shall be transmitted periodically at an RRN of 1 (6.4 minutes, 4.8-8 minutes interval), or when a significant change of airfield/flight deck information occurs, in one of the following word sequences:

a. A J13.0I/J13.0E0 word sequence if the airfield/flight deck is non-operational.

b. A J13.0I/J13.0E0/J13.0C1 word sequence if the airfield/flight deck is operational.

3. A J13.0C2 word shall be added to the report to form a J13.0I/J13.0E0/J13.0C1/J13.0C2 word sequence for an operational airfield/flight deck when logistics information is held:

a. Every third transmission.

b. When a significant change in logistics data occurs.

If the reporting unit is limited to 3 words per time slot, the J13.0C2 word shall replace the J13.0C1 word to form a J13.0I/J13.0E0/J13.0C2 word sequence to be transmitted as in 3a and 3b.

4. All fields of the J13.0C1 word for which currently valid data is not held shall be set, on transmission, to their No Statement/default value.

MIL-STD-6016B

J13.0 TRANSMIT/RECEIVE RULES (Continued)

RECEIVE RULES

1. No reliance should be placed on weather data which has a time of observation whose hour is not equal to the hour of the current time of day, e.g., after 1000 hours any weather data with a time of observation earlier than 1000 hours is no longer valid.
2. The Time of Observation, Hour and Time of Observation, Minute fields refer only to the weather reported in the message, and shall not be interpreted if the J13.0C1 word is not present in a transmission.

A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK.

THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

J13.2 TRANSMIT/RECEIVE RULES

TITLE: Air Platform and System Status Message

TRANSMIT RULES

1. The J13.2 Air Platform and System Status message shall be transmitted by JU platforms, by the controlling units of nonJU platforms, or by the C² JUs exercising control over JU platforms.
2. JU platforms shall transmit this message periodically at an RRN between 2 (3.2 minutes, 2.4-4 minute interval) and 4 (48 seconds, 36-60 second interval) or when any data except the fuel field change.
3. Controlling units of nonJU platforms and C² JUs exercising control over JU platforms not reporting their own status shall transmit this message periodically at an RRN = 0 (12.8 minutes, 9.6-12.8 minute interval).
4. The controlling units of nonJU platforms and C² JUs exercising control over airborne JU platforms shall transmit this message once in response to a J7.1 (ACT = 1) Data Update Request message.
5. Only the J13.2CX continuation words appropriate to the platforms' equipment and stores load need be transmitted. If there are more continuation words containing data than can be transmitted in a single time slot the message shall be transmitted as follows:
 - a. When there is a limit of 3 words per time slot, the J13.2I word followed by two J13.2CX words will be sent. This sequence will be repeated until all continuation words containing data have been sent.
 - b. When there is a limit of 6 words per time slot, the J13.2I word followed by five J13.2CX words will be sent. This sequence will be repeated until all continuation words containing data have been sent.
6. A platform reporting its own status shall set the Reference TN field to the same track number as TN, Source in the header word.

MIL-STD-6016B

J13.2 TRANSMIT/RECEIVE RULES (Continued)

TRANSMIT RULES (Continued)

7. When reporting both burnable and off-load fuel, two initial words must be sent.

RECEIVE RULES

C² JUs assuming control of a platform whose status is being reported in a J13.2 message shall retain these data for retransmission.

		UNABLE TO PERFORM MISSION	3	

769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE- BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

J13.3 TRANSMIT/RECEIVE RULES

TITLE: Surface (Maritime) Platform and System Status Message

TRANSMIT RULES

1. The J13.3 Surface (Maritime) Platform and System Status message shall be transmitted by JU platforms, by the controlling units of nonJU platforms, or by the C² JUs exercising control over JU platforms.
2. JU platforms shall transmit this message periodically at an RRN = 2 (3.2 minutes, 2.4-4 minute interval) or when data change, but no more than once in any 48-second interval.
3. Controlling units of nonJU platforms and C² JUs exercising control over JU platforms not reporting their own status shall transmit this message periodically at an RRN = 0 (12.8 minutes, 9.6-12.8 minute interval).
4. The controlling units of nonJU platforms and C² JUs exercising control over surface (maritime) platforms shall transmit this message once in response to a J7.1 (ACT = 0 or 1) Data Update Request message.
5. Only the J13.3CX continuation words appropriate to the platform's equipment and stores load need be transmitted. If there are more continuation words containing data than can be transmitted in a single time slot the message shall be transmitted as follows:
 - a. When there is a limit of 3 words per time slot, the J13.3I word followed by two J13.3CX words will be sent. This sequence will be repeated until all continuation words containing data have been sent.
 - b. When there is a limit of 6 words per time slot, the J13.3I word followed by five J13.3CX words will be sent. This sequence will be repeated until all continuation words containing data have been sent.
6. A platform reporting its own status shall set the Reference TN field to the same track number as TN, Source in the header word.

769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

DFI	DUI	DUI/DI NAME	DI BIT CODE	DUI/DI EXPLANATION
769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

753	002	OPERATIONAL CAPABILITY -----		DESCRIBES THE OPERATIONAL CAPABILITY OF THE REPORTED PLATFORM OR SYSTEM.
		NO STATEMENT	0	
		FULLY OPERATIONAL	1	
		PARTIALLY OPERATIONAL	2	
		NONOPERATIONAL	3	
769	002	TRACK NUMBER, REFERENCE -----		A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE- BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

J14.0 TRANSMIT/RECEIVE RULES

TITLE: Parametric Information Message

TRANSMIT RULES

1. The J14.0 Parametric Information message shall be transmitted by C² EW JUs and nonC² EW JUs either autonomously or in response to commands and requests for parametric information.

2. The J14.0 Parametric Information message may be transmitted autonomously when tactically significant information is available. It shall report the latest locally derived information by transmitting the appropriate J14.0 continuation word(s).

3. Additionally, a C² EW JU or nonC² EW JU shall transmit the J14.0 message under the following conditions:

a. When information for at least one field in the message has been locally derived.

b. Upon operator action to transmit data link received information for a track when no local information is available.

c. In conjunction with a J14.2 Electronic Warfare Control/Coordination message to provide parameters pertaining to EW Action Values 1, 2 and 12.

d. When requested by a J14.2 Electronic Warfare Control/Coordination message with an appropriate value set in the Electronic Warfare Action Value field.

4. The J14.0 message is transmitted once:

a. When initiated.

b. Periodically at an RRN = 4 (48 seconds, 36-60 second interval). The periodic timer shall be restarted when a J14.0 transmission is made due to data change or operator action in accordance with transmit rule 4c below.

J14.0 TRANSMIT/RECEIVE RULES (Continued)

TRANSMIT RULES (Continued)

c. When any of the below listed elements change, or an operator action is taken to transmit the J14.0:

- (1) FIX OR BEARING DESCRIPTOR.
- (2) THREAT EVALUATION.
- (3) SPECIAL PROCESSING INDICATOR.
- (4) ENVIRONMENT/CATEGORY.
- (5) BROAD CLASSIFICATION.
- (6) AMPLIFYING CHARACTERISTICS.
- (7) LOCK-ON.
- (8) FREQUENCY ($> 1\%$)*.
- (9) BEARING ($> 5^\circ$, or system accuracy, whichever is greater)*.
- (10) COURSE ($> 45^\circ$)*.
- (11) SPEED (> 50 DMH AIR, 5 DMH OTHER)*.
- (12) MODE NUMBER.
- (13) EMITTER NUMBER.
- (14) WARTIME RESERVE INDICATOR.
- (15) PRF/PRI ($>1\%$)*.
- (16) NATIONALITY/ALLIANCE.
- (17) PLATFORM.
- (18) SPECIFIC TYPE.
- (19) LOCAL DISCRETE IDENTIFIER.
- (20) CALL SIGN, OBSERVED.

5. The Bearing Accuracy field shall be set to a value other than a No Statement value when Bearing (other than Bearing Unknown) is reported.

6. When a J14.0 message is transmitted in response to a J14.2 message with EW Action Value field = 0, the received Periodicity of Report data element shall be used in lieu of Transmit Rule 4.

* Unless another change criterion is pre-selected by operator action.

J14.0 TRANSMIT/RECEIVE RULES (Continued)

7. Table J14-2 shows the word sequences needed for example combinations of parameters requiring more than three words, when transmissions are restricted to three words per time slot and when more than three words per time slot are available. The table does not cover all possible combinations of parameters that can be used.

RECEIVE RULES

The acceptance of remote information shall be optional when locally derived information is available. However, the rejection of remote information must require operator action and the subsequent transmission of locally derived information. The information in the last J14.0 message received must be accepted, if the applicable field is implemented, when locally derived information is not available.

J14.2 TRANSMIT/RECEIVE RULES

TITLE: Electronic Warfare Control/Coordination Message

TRANSMIT RULES

1. The J14.2 Electronic Warfare Control message shall be transmitted by C² EW net participants to control activities of the nonC² EW net participants and by the EW net participants in the coordination of activities among themselves. Table J14-3 indicates the word sequences and R/C value each Electronic Warfare Action Value contained in the J14.2 message. Transmission of the J14.2 message with the various R/C values set shall be in accordance with the procedures specified in paragraph 4.1.7.

2. Table J14-4 shows word sequences when transmissions are restricted to three or six words per time slot. The continuation word sequence is normally in ascending numerical order. The table does not cover all possible examples.

3. The J14.2 message shall be transmitted in response to a J14.2 message that has requested data when a J14.0 message is not required.

4. Any J14.2 message with the Automatic Electronic Countermeasures Negation field set to value 1 shall be transmitted with the R/C field set to value 0.

RECEIVE RULES

There are no receive rules for this message.

LEGEND

- X - Indicates that the J14.2 word specified must be transmitted whenever that particular EW Action Value is set. When either SECT, AOP, EMIT, FREQ, NAT/ALL, PRF/PRI, or CALLSIGN is in a continuation column, the continuation word corresponding to the column should be included in the message to provide the necessary data needed to describe the objective of the action to be taken when that particular action value is set. For example, EW Action Value = 17, Jamming request, the initial word shall be transmitted with continuation words being optional, depending on the objective of the action. If the objective is an emitter, the J14.2C3 word would be transmitted. If the objective is a frequency, the J14.2C4 word would be transmitted, etc.
- SEC - Sector
- AOP - Area-of-Probability
- EMIT - Emitter
- FREQ - Frequency
- NAT/ALL - National/Alliance
- CALLSIGN - Call Sign
- PRF/PRI - Pulse Repetition Frequency/Pulse Repetition Interval

¹ The J14.2C2 word is required when the Bearing Origin field in the J14.2C1 word is set to one.

EACH THREE- BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

769	008	TRACK NUMBER, ASSOCIATED -----		THE TN OF AN ENTITY THAT IS ASSOCIATED WITH THE SUBJECT TN OF THE MESSAGE. THE NINETEEN BITS OF THIS TN ARE DIVIDED INTO FIVE GROUPS CONSISTING OF TWO FIVE-BIT GROUPS AND THREE THREE-BIT GROUPS. EACH FIVE-BIT GROUP REPRESENTS AN ALPHANUMERIC CHARACTER OF EITHER AN ALPHA CHARACTER OF A THROUGH Z (EXCLUDING THE ALPHA CHARACTERS I AND O) OR A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. EACH THREE-BIT GROUP REPRESENTS A NUMERIC CHARACTER OF ZERO THROUGH SEVEN. THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

THEREFORE, ANY TN CAN BE REPRESENTED BY AANNN WHERE A IS AN ALPHANUMERIC CHARACTER CODED WITH FIVE BITS AND N IS A NUMERIC CHARACTER CODED WITH THREE BITS. CODING FOR A FIVE BIT ALPHANUMERIC CHARACTER IS SHOWN BELOW. CODING FOR A THREE BIT NUMERIC CHARACTER IS EXACTLY THE SAME AS ZERO THROUGH SEVEN OF THE FIVE BIT ALPHANUMERIC CHARACTER WITH THE FIRST TWO LEADING ZEROES DELETED.

431	003	EMITTER CONFIDENCE		
-----	-----	--------------------	--	--

THE CONFIDENCE IS COMPUTED ON THE BASIS OF THE NUMBER OF PARAMETER MATCHES FOR THE FOLLOWING EMITTER PARAMETERS: FREQUENCY, PULSE REPETITION FREQUENCY, PULSE WIDTH, JITTER, SCAN CYCLE/ANTENNA ROTATION PERIOD/SCAN RATE, SCAN TYPE AND POLARIZATION. A PARAMETER MATCH MEANS THAT AN EMITTER PARAMETER HAS BEEN DETECTED, MEASURED, AND COMPARED WITH DATA STORED IN INTELLIGENCE FILES. IT FURTHER IMPLIES THAT NO PARAMETER FOUND IS OUTSIDE THE RANGE SPECIFIED IN THE INTELLIGENCE FILE.

LOW CONFIDENCE - LESS THAN 4 PARAMETER MATCHES.

THE VALUE IS DETERMINED BY THE FOLLOWING RULES:

A. INCREASE ONE VALUE FOR EACH ADDITIONAL PARAMETER MATCH ABOVE 3.

B. INCREASE ONE VALUE FOR AN ES/ NON-ES 'OPERATOR KNOWN' ASSOCIATION (THE OPERATOR RECOGNIZES AN ASSOCIATION THAT MAY OR MAY NOT HAVE BEEN TRANSMITTED ON THE LINK).

C. INCREASE TWO VALUES FOR EVERY 'OPERATOR KNOWN' EMITTER ASSOCIATION.

D. THE TOTAL SHALL NOT EXCEED 5. HIGH CONFIDENCE (OPERATOR EVALUATION).

J28.20 TRANSMIT/RECEIVE RULES

TITLE: Text Message

TRANSMIT RULES

1. A Text report consists of 1 to 240 J28.20 Text messages (containing up to 13,680 characters of text (i.e., 240 messages of 57 characters per message)).
2. A J28.20 Text message may consist of a J28.20 Initial word with either 2 (Standard Packing) or 5 (Packed-2 or Packed-4) Extension words, with the exception of the last or only message of a report. In the case of the last or only message of a report, only the number of words necessary (i.e., the initial word with 0 to 5 Extension words) to convey the useful (non-blank) text data shall be transmitted. If the text data ends before the last character location in the Initial or Extension word being filled is reached, the additional character locations in that word shall be filled with blanks.

RECEIVE RULES

1. Text messages are separated by their Source Track Number.
2. Reception is complete when the Message Number field equals the Message Count field or when 96 seconds have elapsed since reception of the last Text message received from that Source Track Number.
3. If the received report is incomplete, the received message shall be filled with a special character to indicate incomplete data reception. The number of special characters inserted shall equal the lost data as evidenced by the gap in the Message Numbers. The selected fill character shall be a character not contained in the Text character set.
