J31.0 MESSAGE SUMMARY

PURPOSE

The J31.0 Over-the-air Rekeying Management Message is used to exchange cryptonet management information for rekeying the KGV-8.

J31.0 TRANSMIT/RECEIVE RULES

TITLE: Over-the-Air Rekeying Management Message

TRANSMIT RULES

1. The J31.0 Over-the-Air Rekeying Management message shall be transmitted:

a. By the over-the-air rekeying center as a synchronization message when the Action Code, Over-the-Air Rekeying field is set to value 1 and a specific execution time for a new cryptovvariable is required, or when the 39 cryptovvariable synchronization bits are required. In the above case, the J31.0 message must be followed by the J31.1 Over-the-Air Rekeying message.

b. By an individual JU as a cryptovvariable status report when the Action Code, Over-the-Air Rekeying field is set to value 2 in response to a cryptovvariable status request, and as a direct cryptovvariable request when the Action Code, Over-the-Air Rekeying field is set to value 3 and a JU requires a cryptovvariable label not currently held.

c. By an authorized JU as an indirect cryptovvariable request when the Action Code, Over-the-Air Rekeying field is set to value 4 and the authorized JU requires that a cryptovvariable be provided to another JU, and as a cryptovvariable status request message when the Action Code Over-the-Air Rekeying field is set to value 5 and the authorized JU requires the cryptovvariable status of the addressed JU.

2. The J31.0 message shall contain the words indicated in Table 31-2.

3. A J31.0 (ACT = 2) message is transmitted with the R/C field set to value 2, all other original J31.0 messages shall be transmitted with the R/C field set to value 0; however, the terminal does not provide a Receipt/Compliance response for the J31.0 (ACT = 7) Packed Over-The-Mux Rekeying (OMTR) message. When the Action Code, Over-the-Air-Rekeying field is set to values 1, 2, 5, 6, or 7 the J31.0 message shall be addressed to a specific terminal. When the Action Code , Over-the-Air-Rekeying field is set to values 3 or 4 the J31.0 message shall be addressed either to a specific terminal or to 77777(octal).

J31.0 TRANSMIT/RECEIVE RULES (Continued)

RECEIVE RULES

1. When a J31.0 message is received with the Action Code, Over-the-Air Rekeying field set to value 1:

a. The terminal shall transmit a machine receipt J31.0 message (R/C = 2) when this message is accepted.

b. The terminal shall retain this message until the corresponding J31.1 message is received and the terminal performs the required rekey function.

2. When a J31.0 message is received with the Action Code, Over-the-Air Rekeying field set to 2 there are no receive rules specified.

3. When a J31.0 message is received with the Action Code, Over-the-Air Rekeying field set to value 3 and the Memory Location Request field is set to no statement, the receiving JU shall use the cryptovvariable cross-reference table to determine the appropriate memory location for the requested cryptovvariable.

4. When a J31.0 message is received with the Action Code, Over-the-Air Rekeying field set to value 4:

a. And the Cryptostatus Information Code field is set to value 1, the receiving JU shall ascertain the cryptovvariable status of the subject JU.

b. When the Memory Location, Request field is set to no statement, the receiving JU shall determine the correct memory location.

5. When a J31.0 message is received with the Action Code, Over-the-Air Rekeying field set to value 5 the addressed unit shall transmit the requested single message with the R/C field set to value 2 in the time slot specified in the original J31.0 message (R/C = 0).

J31.0 TRANSMIT/RECEIVE RULES (Continued)

RECEIVE RULES (Continued)

6. Original J31.0 messages in which the Action Code, Over-the-Air- Rekeying field is set to values 1, 2, or 5 shall be accepted only if they are specifically addressed to the terminal. Original J31.0 messages in which the Action Code, Over-the-Air-Rekeying field is set to values 3 or 4 shall be accepted by a JU with responsibility for cryptonet management if they are specifically addressed to the terminal or to 77777(octal).

7. When a J31.0 message is received with the Action Code, Over-the-Air Rekeying field set to value 6 the terminal shall transmit a machine receipt J31.0 message with the R/C field set to value 2 and retain the message until it performs the required rekeying function in accordance with the execution time specified in the message. At the execution time specified:

a. The terminal will transmit an appropriate CANTPRO J31.0 message if the KGV-8 cannot process the cryptovvariable.

b. The terminal will transmit a HAVCO J31.0 message when the KGV-8 properly processes the cryptovvariable.

TABLE J31-2. Required Word Sequences for Action Code,
Over-the-Air Rekeying Values

ACTION CODE, OVER-THE-AIR REKEYING	J31.0 WORDS TO BE TRANSMITTED			
	I	E0	C1	C2
0 - Change Cryptovvariable Immediately ¹				
1 - Change Cryptovvariable at Time Specified	X			X
2 - Cryptovvariable Status Report ²	X	X	X	
3 - Direct Cryptovvariable Request ³	X	X	X	
4 - Indirect Cryptovvariable Request ⁴	X ³	X	X	
5 - Cryptovvariable Status Request ⁵	X			
6 - Packed Over-the-Air Rekeying ⁶	X			X
7 - Packed Over-the MUX Rekeying ⁶	X			X

NOTES:

- 1 Action code 0 is illegal for the J31.0 message.
- 2 For status report the J31.0I execute time fields are not valid. The J31.0E0 is the current cryptovvariable cross-reference table held by the JU. The SDU Identification Number Unique Variable Update Number (UVUN) and the current Cryptoperiod Designator are the only valid fields used in J31.0C1.
- 3 For direct cryptovvariable request the memory location is no statement when a specific location is not or cannot be requested. In this case, the cryptovvariable cross-reference table must be used by the receiving JU to determine the cryptovvariable memory location.
- 4 For the indirect cryptovvariable request, the J31.0E0 word and the SDU Identification Number, UVUN and the current Cryptoperiod Designator for the subject JU shall be transmitted when available. When this information is not available, the cryptovvariable status indicator code shall be set to value 0. When the specific memory location is not or cannot be stated, the memory location field is set to no statement.
- 5 For the cryptovvariable status request, the execute time is invalid.
- 6 For the packed rekeying messages, the I, E0, and E1 words of the J31.1 OTAR message follow the I and C2 words of this message.

MIL-STD-6016B

J31.1 TRANSMIT/RECEIVE RULES

TITLE: Over-the-Air Rekeying Message

TRANSMIT RULES

1. The J31.1 Over-the-Air Rekeying message will be transmitted by the designated cryptonet manager when a J31.0 Over-the-Air Rekeying Management message (ACT = 1, 6, or 7) has been sent. In this case the Action Code, Over-the-Air Rekeying field must be the same as in the associated J31.0 message.
2. The J31.1 message may be transmitted without a prior J31.0 message when the 39 cryptovvariable synchronization bits and the synchronization cryptovvariable logical label are not required to be transmitted and the execution time is immediate. In this case the Action Code, Over-the-Air Rekeying field must be set to 0.
3. The cryptonet manager shall provide the terminal with the time slot that shall be used to transmit the J31.1 message when the J31.1 message is transmitted without a J31.0 message.
4. When the J31.1 Over-the-Air Rekeying message follows a J31.0 Over-the-Air Rekeying Management message (ACT = 6 or 7), the J31.1 message shall be in the same time slot as the J31.0 message. The terminal provides an R/C response to the J31.0 (ACT = 6) Packed OTAR message, and in the same time slot includes the J31.1 (ACT = 6) message with values in each field of the J31.1 which are unchanged from those received. The terminal does not provide an R/C response for the J31.0 (ACT = 7) Packed OTMR message or for the J31.1 (ACT = 7) that follows it in the same time slot.

RECEIVE RULES

1. The terminal shall transmit a machine receipt J31.1 message (R/C = 2) when this message (ACT = 0 or 1) is accepted.
2. The 39 cryptovvariable synchronization bits used for over-the-air rekeying shall be those 39 bits used to synchronize the encryption of the original

MIL-STD-6016B

J31.1 TRANSMIT/RECEIVE RULES (Continued)

RECEIVE RULES (Continued)

transmission of the J31.1 message and the synchronization cryptovvariable logical label shall be system defined when the J31.1 message is received without prior receipt of a J31.0 message.

3. At the execution time specified in the ACT = 0 or 1 message:

a. The terminal will transmit an appropriate CANTPRO J31.1 message if the KGV-8 cannot process the cryptovvariable.

b. The terminal will transmit a HAVCO J31.1 message when the KGV-8 properly processes the cryptovvariable.

J31.7 TRANSMIT/RECEIVE RULES

TITLE: No Statement Message

TRANSMIT RULES

The J31.7 No Statement message shall be transmitted following the completion of a J series message or messages that do not fill a time slot. One J31.7I No Statement initial word shall be transmitted to fill each Reed- Solomon code word that is not used to transmit information.

RECEIVE RULES

There are no receive rules specified for this message.

TRACK NUMBER, ADDRESSEE		15
SECURE DATA UNIT SERIAL NUMBER		16

MIL-STD-6016B

RTT-A TRANSMIT/RECEIVE RULES

TITLE: RTT Interrogation-Addressed Message

TRANSMIT RULES

1. The RTT Interrogation - Addressed shall be transmitted as required to execute the active synchronization procedure.
2. When transmitted, the RTT Interrogation - Addressed shall be addressed to a specific terminal whose time quality is greater than that of the interrogating terminal.
3. The RTT Interrogation - Addressed shall be transmitted only to terminals that are within line of sight and are nonsimulated as determined by the examination of received J2 PPLI messages.

RECEIVE RULES

Upon the receipt of an RTT Interrogation - Addressed, a terminal shall respond with an RTT Reply in accordance with the transmit rules specified for the RTT Reply.

RTT-B MESSAGE SUMMARY

PURPOSE

The RTT Interrogation-Broadcast message provides the means for a JTIDS/MIDS terminal to synchronize with system time using the active synchronization procedure. The RTT-B is not addressed to any particular terminal. Any terminal that meets the specified requirement for time quality level responds with the RTT Reply.

DATA ELEMENT SUMMARY

<u>DATA ELEMENT</u>	<u>RTT-B</u>	<u># BITS</u>

MIL-STD-6016B

RTT-B TRANSMIT/RECEIVE RULES

TITLE: RTT Interrogation-Broadcast Message

TRANSMIT RULES

1. The RTT Interrogation - Broadcast shall be transmitted as required to execute the active synchronization procedure. This interrogation shall be transmitted in the contention access mode on the net whose number corresponds to the time quality number contained in the J2 PPLI message of the best candidate RTT JU.
2. When transmitted, the RTT Interrogation - Broadcast shall be transmitted specifying a time quality value greater than that of the interrogating terminal but not greater than that of the highest time quality of other terminals as determined by the receipt of J2 messages.

RECEIVE RULES

Upon the receipt of a RTT Interrogation - Broadcast whose specified time quality value is equal to its own time quality, a terminal shall respond with a RTT Reply in accordance with the transmit rules specified for the RTT Reply.

RTT-REP MESSAGE SUMMARY

PURPOSE

The RTT Reply message provides the means for a JTIDS/MIDS terminal to support the active synchronization procedure by providing time-of-arrival data in response to either an RTT-A or RTT-B Interrogation.

DATA ELEMENT SUMMARY

<u>RTT-REP</u>	
DATA ELEMENT	# BITS
TIME OF ARRIVAL	19
SECURE DATA UNIT SERIAL NUMBER	16

MIL-STD-6016B

RTT-REP TRANSMIT/RECEIVE RULES

TITLE: RTT Reply Message

TRANSMIT RULES

1. The RTT Reply shall be transmitted by a terminal upon the receipt of a RTT Interrogation - Addressed or a RTT Interrogation - Broadcast whose time quality is equal to its own time quality value.
2. The RTT Reply shall be transmitted during the same time slot as the received RTT Interrogation, 4,275 microseconds after the start of the time slot.
3. The RTT Reply shall not be transmitted by terminals that are operating in either the Polling or Conditional Radio Silence Mode.

RECEIVE RULES

Upon the receipt of a RTT Reply that was transmitted in response to its RTT Interrogation, a terminal shall perform a radio link time correction to update its clock and its time quality value.

FIELD CODING FOR RTT-REP (SHEET 1)

DFI	DUI	DUI/DI NAME	DI BIT CODE	DUI/DI EXPLANATION
387	019	TIME OF ARRIVAL -----		THE TIME INDICATED BY THE TERMINAL'S CLOCK AT THE TIME OF RECEPTION AT THE ANTENNA OF THE END OF THE FINAL 26-MICROSECOND TRANSMISSION SYMBOL OF THE RTT INTERROGATION MESSAGE.
		0 THROUGH 6.55 MILLISECONDS	0 THROUGH 524287	IN 12.5 NANOSECOND INCREMENTS. CODED WITH THE LEAST SIGNIFICANT BIT IN BIT POSITION 18.
1677	001	SECURE DATA UNIT SERIAL NUMBER -----		DATA INSERTED BY SOURCE SECURE DATA UNIT OF THE ORIGINATOR AND CAN BE INTERPRETED ONLY BY THE SECURE DATA UNIT.
		SEE DUI EXPLANATION	0 THROUGH 65535	

MIL-STD-6016B

SECTION 6

6. NOTES

This section contains information of a general or explanatory nature which may be helpful, but is not mandatory.

6.1 INTENDED USE

This standard will be used by all tactical data systems that have a requirement for Link 16 digital exchange on a real time basis.

6.2 SUPERSESSSION DATA

This standard supersedes MIL-STD-6016A, 30 April 1999.

6.3 SUBJECT TERM (KEY WORD) LISTING

6.3.1 GENERAL

Address	Navigation
Alert Indicators	Network
Antijam	Nonreal-Time
Association	Pairing
Coding	Participating Unit
Command and Control	Precision
Correlation	Real Time
Data Forwarding	Reference
Dual Designation	Reporting Responsibility
Electronic Warfare	Reporting Unit
Filtering	Round-Trip Timing
Forwarding Unit	Special Processing
Identity	Link 11
IFF/SIF	Link 11B
Interface Unit	Link 16
JTIDS/MIDS Unit	Track Correlation
Message	Track Number
Message Security	Track Quality
Message Sequence	Word

6.3.2 FUNCTIONAL AREAS

The Link 16 interface has been divided into functional area as follows:

- a. System Information Exchange and Network Management.
- b. Precise Participant Location and Identification (PPLI).
- c. Air Surveillance.
- d. Surface (Maritime) Surveillance.
- e. Subsurface (Maritime) Surveillance.
- f. Land (Ground) Surveillance.
- g. Electronic Surveillance.
- h. Electronic Warfare (EW)/Intelligence.
- i. Mission Management.
- j. Weapons Coordination and Management.
- k. Control.
- l. Information Management.

MIL-STD-6016B

6.4 INTERFACE CHANGE PROPOSALS (ICPs) INCLUDED IN THIS UPDATE

<u>ICP</u>	<u>Title</u>
TM93-091/Ch10	Track Number Block Allocation and Assignment
TJ93-104/Ch5	"Reset to no statement" rules
TM94-040/Ch7	Mode Clear Corrections
TJ95-016/Ch6	Interpretation of Filters
TM96-040/Ch6	Weapon Type Change
TM96-049/Ch1	"Sensor" Definitions
TM96-051/Ch6	Variable Track Quality
TM97-010/Ch7	TN Continuity
TM97-021/Ch2	IFF/SIF Validity and Current Criteria
TJ97-041/Ch1	Transmission of the J12.6E0 Word with Each Update
TM97-070/Ch2	DUI Definitions for DUIs 2652 and 2654
TM97-076/Ch1	Definition for Hostile
TM97-077/Ch7	J15.0 Changes
TJ97-078	J3.0 Update to Table 4.1-3
TM97-079/Ch7	Points Data Update Request Response
TM97-080/Ch2	Change Data Order Lockout Exercise Exclusion
TM97-081/Ch7	Clear Emergency/Force Tell Indicator with J2X Message
TJ97-084/Ch4	TMD Situational Data on TADIL A/B
TM97-091/Ch2	Mission Correlator Change Message
TJ97-095/Ch5	Retransmission of Surveillance Data
TM97-099/Ch5	Environment/Category
TM97-100/Ch4	General/Specific Type-No Statement
TJ97-111/Ch3	Handling of M.11B Message from TADIL J
TM97-113/Ch3	Prohibit Unknown Pending in CDO
TM97-115/Ch2	Weapons Status Fields in J13.3 Inadequate
TJ97-116/Ch3	M.9F from J14.0 Translation
TM97-128/Ch7	EW Control and Coordination Revision
TM97-142/Ch4	Deletion of EW Tracks and Tracks of Unknown Environment/Category
TJ97-143/Ch2	Target Position Quality (TPQ)to Track Quality (TQ) Mapping
TM97-153/Ch6	Datum Reporting
TM97-154/Ch5	Acoustic Bearing Origins
TM97-155/Ch4	Updating Specific Type Lists
TM97-187/Ch3	Reporting Rules for Friendly Interceptor Missiles
TJ97-188/Ch1	Priority Field Implementation
TM98-001/Ch5	J3.5 Square/Circle Switch and Lat/Long Additions
TM98-002/Ch4	Modifications to the J6.0/FJ6.0 Intelligence Information Message
TM98-003/Ch1	SAM Status Addition to Land (Ground) Platform Activity
TM98-006/Ch5	Time Report Function
TM98-015/Ch4	Engage with ASM/SSM Multilink Capability
TJ98-016/Ch2	Deletion of the J9.2 From MIL-STD-6016
TM98-017/Ch5	J13.4/FJ13.4 Subsurface (Maritime) Platform and System Status Message
TM98-019/Ch4	Command Value Correction
TJ98-020/Ch5	Aircraft State Table Deletion
TM98-022/Ch3	Redundant Command Capabilities
TJ98-023	Optional Implementation of Inter-Fighter SIDS
TJ98-026/Ch2	Deletion of J16 V/R-Series Control
TJ98-028/Ch2	J28.2(8) Message
TM98-029/Ch2	Ballistic Missile Defense Coordination via TADIL J
TM98-035/Ch11	Correlation/Decorrelation

MIL-STD-6016B

TM98-050/Ch3	Deletion of Command Authority for M.15/J9.0
TM98-053/Ch3	Additional J13.2 Subsystem Statuses
TM98-059/Ch3	Data Forwarding Receipt/Compliance Correction
TM98-061/Ch1	Clarify IFF Resolution Procedures
TJ98-062/Ch1	Corrects Error in MIL-STD 6016 Table 4.5-1
TJ98-063/Ch2	Remove Single Threat Application of MADs 37 & 38 in the J12.0 Message
TJ98-064/Ch1	Mandatory Transmission of ENV/CAT (E/C) in the J12.6 Message
TM98-065	Orbit, Random Closed Definition
TJ98-068/Ch2	J12.6 Target Accuracies
TM98-113/Ch1	Modification to the J2.2 Bailout Indicator Definition
TM98-114/Ch3	Delete J9.0 Fragmentary Order Number Field
TJ98-115/Ch1	Redundant Action Value Fields in MIN IMP Tables
TM98-125/Ch7	Deletion of Mission Correlators
TM98-126/Ch1	Incorrect Data Element Translation of J10.3 Message
TM98-129/Ch1	EW Terminology Update
TJ98-130/Ch1	Net Number Value Change
TJ98-131/Ch5	Clarification of PPLI Reporting
TJ98-132	J7.0 Transmission Clarification
TM98-133/Ch2	Incorrect Definition of Voice Frequency/Channel
TM98-137/Ch3	J3.0 Line Segment Time Reporting
TJ98-140/Ch1	Deletion of Source Indicator
TJ98-142/Ch1	J12.6E0 Minimum Implementation for SID=5
TM98-143/Ch1	J13.3/FJ13.3 and J13.5/FJ13.5 Transmission Rate
TM98-148/Ch2	Chaining DFIs Rules
TJ98-156/Ch2	J12.6 "Sensor On" As Default
TM98-157/Ch1	"High Energy Lasing" Addition to Air Platform Activity
TM98-158/Ch1	Add Airborne Laser to DFI/DUI 1797/001
TJ98-159/Ch5	J12.6 SID by Environment/Category
TJ98-191/Ch1	Deletion of Exercise Filter Indicator
TJ98-195	Correction to J3.4 Transmit Rule in TM94-030
TJ99-010/Ch5	Drop Track Transmission of Purged J3.0, J3.1, AND J3.5
TM99-013/Ch5	Altitude, Corridor, and LLTR Reporting in J/F3.0
TM99-016/Ch4	Altitude in the J3.0/FJ3.0 Reference Point and J7.6/FJ7.6
	Filter Management Messages
TM99-018/Ch5	Deletion of PLAD from J7.6/FJ7.6
TM99-019/Ch2	Multiple Engagements in J10.2/FJ10.2
TM99-021/Ch5	ASW Sensor Definition
TM99-027/Ch5	SAM/SSM Addition to J3.3 and J6.0 Messages
TM99-030/Ch3	New Data Elements for J9.0 and J12.0
TJ99-031/Ch2	Track Filter for NONC2 JUs
TM99-033/Ch3	Update Type of Stores
TJ99-038/Ch2	RC Table 4.1-8 Split
TM99-045/Ch2	Cancellation of EWACs 28 and 29
TM99-047/Ch1	Assuming R2 on Lost Tracks
TM99-048/Ch3	Clarification of Ballistic Missile DUR Response Rule
TM99-049/Ch1	Clarification of Variable Delta t
TJ99-050/Ch5	J9.1/1FJ9.1 Engagement Coordination Message Transmit/Receive Rules
TJ99-068/Ch1	M.6B to Link 16 Translation Tree
TM99-069/Ch3	DFI 266/422 Definition
TM99-070	Addition of Subsurface (Maritime)

INTERFACE CHANGE PROPOSALS

1. Interface Change Proposals (ICPs). Changes to this standard are prepared according to the specific procedures established by the Multi-TDL Configuration Control Board (CCB) using the attached ICP form. Instructions for filling out the form are found on the facing page. Submission will be made directly to the appropriate service or agency CCB member organization for ultimate submission to DISA/IN5.

2. Questions and comments may be submitted to:

Director,
DISA Interoperability (IN)
Military C2 Standards Division (IN5)
5600 Columbia Pike
Falls Church, VA 22041-2717

UNCLASSIFIED

INTERFACE CHANGE PROPOSAL (ICP)

ICP NUMBER:

CHANGE PROPOSAL TITLE:

RECORD OF PROCESSING
DATE: ACTION:

UNCLASSIFIED

MIL-STD-6016B

ICP NUMBER: A unique number identifier, entered by DISA/IN5.

CHANGE PROPOSAL TITLE: The originator fills in a short title for the ICP which is descriptive of the content.

ORIGINATOR & ADDRESS: Originator's activity title, address

ORIGINATOR'S INTERNAL NUMBER: Originator's internal number.

AFFECTED DOCUMENT(S): The originator identifies the affected document(s).

PRECEDENCE: The originator indicates routine, priority, or urgent for desired processing.

RECOMMENDATIONS: The originator indicates special processing requirements for the ICP, such as:

- a. Requirement for priority or urgent processing.
- b. The inclusion of the ICP on a TRP agenda.
- c. The request for a CCB phone vote.
- d. The recommendation for certification testing.
- e. Any time requirements for the approval of the ICP.
- f. Whether DERG changes are required.
- g. Whether JMTOP changes are required.

ALLIED COORDINATION: The originator indicates if allied coordination is applicable.

RECORD OF PROCESSING: DISA/IN5 indicates the change and/or action directed by the CCB. The date of CCB action will be the last day of the appropriate CCB, and annotated Day-Month-Year. All actions recorded in the record of processing shall pertain to the ICP unless otherwise specifically stated.

MIL-STD-6016B

1. STATEMENT OF THE PROBLEM: Brief statement of the problem by the originator.
2. PROBLEM ANALYSIS: Analysis of the problems and questions involved.
3. PROPOSED SOLUTION: Brief statement of the essentials of the solution.
4. ALTERNATIVE SOLUTIONS: Brief statement of any alternative solutions. If there are no alternative solutions, indicate "None." The submitted ICP may state "To be determined."
5. SYSTEM CHANGES REQUIRED: Identifies any system impacts associated with the change proposal which may require system changes. If there is no impact, state "None." If processing has yet to determine the impact, state "To be determined."
6. CONFIGURATION ITEM DOCUMENTATION CHANGES: If there are no changes, indicate "None." The section, as submitted, may read "To be determine. Identify documents changed by the ICP.
7. IMPACT ON INTEROPERABILITY: Describes as to whether the proposed change is considered to improve or adversely affect interoperability of data systems.
8. IMPACT ON RELATED DOCUMENTS: Identifies other documents that are/may be affected by this change proposal.
9. IMPLEMENTATION DATES: Identifies the intended implementation dates for this proposed change. If processing has not progressed to the point of knowing the implementation dates, state "To be determined."
10. OTHER CONSIDERATIONS: Provides any information deemed advisable that is not covered elsewhere in the ICP. This paragraph should include determination of whether coordinated implementation is required.
11. REFERENCES: List any references.

12. TRs ADDRESSED IN THIS ICP: Reference all TRs resolved by this ICP, as appropriate.

MIL-STD-6016B

APPENDIX A

MINIMUM IMPLEMENTATION

A.1 SCOPE

A.1.1 GENERAL

Appendix A identifies the minimum data exchange requirements which must be implemented by Service/Agency systems participating on the Link 16 Interface. The fulfillment of these joint data exchange requirements is mandatory to establish and maintain the Link 16 Interface, to participate within a specific functional area, and to prevent adverse effects on the interface. Although a system may implement more than the joint requirements stated here (i.e., system implementation requirements); this appendix describes only the mandatory minimum required for joint purposes. The minimum implementation (MIN IMP) requirements contained in this appendix therefore, do not imply that all operational requirements or desired interoperability levels have been met. The joint MIN IMP requirements in this appendix are used to form the system implementation requirements that are identified in MIL-STD-6016 Appendix D, System Implementation.

This appendix specifies the MIN IMP requirements for only the fixed word format messages contained in Section 5 of the MIL-STD-6016. As other functions and fixed word format messages are developed, the MIN IMP requirements for them will be added. For design purposes, this appendix is to be used in conjunction with the rules, protocols, and procedures contained in other parts of the MIL-STD-6016.

This appendix does not contain the implementation requirements for data forwarding. Specific systems participating in the Link 16 Interface will be required to forward information between Link 16 and Links 11 and 11B. The data forwarding implementation requirements are described in Appendix C of MIL-STD-6016.

A.1.2 APPLICABILITY

The MIN IMP requirements in this appendix apply to all Service/Agency systems participating on the Link 16 Interface. The applicability of these

APPENDIX A

requirements is directed towards digital data exchange in a joint environment where systems of two or more Services/Agencies are involved.

The implementation of these minimum requirements for data exchange is contingent upon the conventions, constraints, protocols and rules specified in MIL-STD-6016 Sections 4 and 5 which must be followed to participate on the Link 16 Interface.

A.2 APPLICABLE DOCUMENTS

The documents listed in section 2 of this standard are applicable to this appendix.

A.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

A.4 GENERAL REQUIREMENTS

MIN IMP is defined in terms of the requirements that must be met at six different levels as follows:

- a. Functional.
- b. Related function.
- c. Message.
- d. Word.
- e. Data element.
- f. Data item.

The hierarchical relationship between these levels is shown in Figure A.4-1. To meet MIN IMP requirements, a system must implement all items within each level that are specified as mandatory before being able to satisfy the MIN

APPENDIX A

IMP requirements of the next lower level. It should be noted that both functional and related function MIN IMP requirements must be satisfied before message MIN IMP requirements can be satisfied. Similarly, message MIN IMP requirements must be satisfied before word MIN IMP requirements can be met.

A system can elect to implement a function that is not mandatory for MIN IMP. When a system elects to implement a nonmandatory function, the MIN IMP requirements at all lower levels for that function must be met. A system cannot elect to implement a nonmandatory item at an intermediate level (e.g., message or word) unless it has first implemented the MIN IMP requirements of all higher levels of that function beginning at the functional level.

The mandatory MIN IMP requirements in this appendix are also defined in terms of transmission and reception.

A.4.1 FUNCTIONAL MINIMUM IMPLEMENTATION

The JTIDS/MIDS Technical Interface Concepts (TIC) technical functions that identify the information exchange requirements are:

- a. System Information Exchange and Network Management.
- b. Precise Participant Location and Identification (PPLI).
- c. Air Surveillance.
- d. Surface (Maritime) Surveillance.
- e. Subsurface (Maritime) Surveillance.
- f. Land (Ground) Surveillance.
- g. Space Surveillance.
- h. Electronic Surveillance.
- i. Electronic Warfare (EW)/Intelligence.

APPENDIX A

- j. Mission Management.
- k. Weapons Coordination and Management.
- l. Control.
- m. Information Management.

Figure A.4-1. Levels of Minimum Implementation

The messages within the Information Management function are not considered as stand-alone messages. The minimum implementation for these messages is contained within the minimum implementation for other functions. Therefore, Information Management is not treated as a function in this appendix.

APPENDIX A

Participation on the Link 16 Interface requires that all participating systems/platforms implement the following two functions:

- a. The System Information Exchange and Network Management function. This function is mandatory for participating terminals to synchronize for message transmissions.
- b. The PPLI function. This function is mandatory for system synchronization, relative navigation, and identification.

Participation on the Link 16 interface also requires that all participating systems/platforms implement their own Platform and System Status message for transmission.

A.4.2 RELATED FUNCTION MINIMUM IMPLEMENTATION

When a system implements either a mandatory or nonmandatory function for transmission, certain related functions must also be implemented to allow the interface to operate.

A.4.3 MESSAGE MINIMUM IMPLEMENTATION

The messages that are mandatory for MIN IMP are determined by the specific functional area in which a system/platform participates. Once a system implements either a mandatory or nonmandatory function, certain messages must then be implemented to allow the interface to operate. In addition, any particular message may be mandatory for MIN IMP by a system's terminal (TER), a system's tactical data system (TDS), or both. The particular messages that must be implemented by a system that implements a given function are also dependent on whether a system is operating as a Command and Control JTIDS Unit (C² JU) or as a Noncommand and Control JTIDS Unit (nonC² JU).

The MIN IMP requirements for the Weapons Coordination and Management and the Control functions are subdivided into Mission Categories. Mission Categories are grouped according to similar operational subfunctions. The Mission Categories are:

APPENDIX A

- a. Air Traffic Control (ATC).
- b. Air Intercept Control (AIC).
- c. Air Support Operations (ASO).
- d. Missile/Remotely Piloted Vehicle (MSL/RPV) Control.
- e. Surface-to-Air Missile (SAM) Unit Control.
- f. Electronic Warfare (EW).
- g. Theater Ballistic Missile Defense(TBMD).

This breakdown allows definition of more meaningful MIN IMP requirements at the lower levels, i.e., the word, data element, and data item levels. Mission Categories may be added to accommodate additional warfare subspecialties as they are provided in the interface design.

A.4.4 WORD MINIMUM IMPLEMENTATION

When a system implements either a mandatory or nonmandatory message for transmission, certain words within the message must then be implemented to allow the interface to operate.

A.4.5 DATA ELEMENT MINIMUM IMPLEMENTATION

When a system implements either a mandatory or a nonmandatory word, certain data elements within that word must also be implemented. The following data elements must always be implemented for transmission and reception when the word in which they are contained is implemented:

- a. Word Format.
- b. Label, Link 16.
- c. Sublabel, Link 16.

APPENDIX A

d. Message Length Indicator.

e. Continuation Word Label.

The required MIN IMP of other data elements within a word is listed by message. When a data element is listed as mandatory for transmission and/or reception, at least one defined value other than the default value for that data element must be implemented. When a data element is nonmandatory for MIN IMP the default value is required for transmission if a system does not implement the data element. This is required to assure that those systems which elect not to implement a data element will transmit the default value for the data element and not a value that has a meaning if the data element were processed.

In all cases, spare fields within a message shall be transmitted with a zero value and shall not be processed on reception.

A.4.6 DATA ITEM MINIMUM IMPLEMENTATION

When a system implements either a mandatory or a nonmandatory data element, it must implement at least one defined value other than the default value for that data element. Data item MIN IMP is stated when specific data items are mandatory for MIN IMP.

It should be noted that certain messages contain action value fields. When these action value fields are set to different values, the meaning or use of a message may change, as well as the mandatory MIN IMP of words within the message, data elements within the words, and data items within the data elements. These changes are reflected in the appropriate tables in this appendix.

A.4.7 WAIVER

In order for a system to participate on the Link 16 Interface, it must either meet the MIN IMP requirements or obtain a waiver. A request for a waiver for a JTIDS/MIDS user shall be submitted by the Service/Agency having control of the system and coordinated with other Services/Agencies prior to approval.

APPENDIX A

The request will identify the specific system, the item for which the waiver is requested, and the rationale for the waiver. Each waiver will be reviewed on an individual basis. This appendix was designed to provide only those functions, related functions, messages, words, data elements, and data items that must be implemented to insure that nonimplementation would not cause an adverse effect upon the information exchange among interfacing systems.

A.4.7.1 INITIAL OPERATIONAL CAPABILITY (IOC)

Systems designated as participants in the IOC may deviate from the MIN IMP requirements in order to meet the requirements of the IOC. The proposed implementation of those systems shall be submitted to JIEO for review in order to verify that the implementation does not create mutual interference or degrade the performance of the other interfacing systems.

A.4.7.2 SPECIAL AND CONTRIBUTING SYSTEMS

Special and Contributing Systems are those systems that participate in the exchange of data in one or more functional areas but have been granted waivers of some mandatory MIN IMP requirements. These are systems which:

- a. Have been designated to perform specific missions that support or are supported by one or more functional areas.
- b. Provide or require joint interface information critical to tactical operations.
- c. By their participation, enhance the mission performance of other interfacing participants.

Requests for designation as a Special or Contributing System shall be submitted to the Service/Agency having control of the system and coordinated with the other Services/Agencies prior to approval.

APPENDIX A

A.5 DETAILED REQUIREMENTS

A.5.1 SYMBOL DEFINITION

Table A.5-1 defines the symbols that are used in the MIN IMP tables.

TABLE A.5-1. Symbol Definitions

<u>SYMBOL</u>	<u>DEFINITION</u>
O	- This symbol is used on the related function MIN IMP table to denote the related functions that are mandatory for implementation if the corresponding function is implemented.
T	- Transmission mandatory.
R	- Reception mandatory.
#	- Implementation for transmission and/or reception is not required for minimum implementation. The item may be implemented by a system if desired. If the item is not implemented for transmission, the item shall be set to its "no statement" value as defined in the field coding contained in MIL-STD-6016 Section 5. When a "no statement" value is not specified in MIL-STD-6016 Section 5, the default or "no statement" value is specified in Table A.5-2 of this appendix.
X	- This symbol is used to indicate that an item shall not be implemented. This does not preclude a terminal or its system from performing required receipt/compliance transmissions and/or relay functions.
N	- The data element shall be transmitted with its "no statement" or default value set, and shall be interpreted as "no statement" or as its default value upon receipt.

APPENDIX A

A.5.2 NOTATIONS

A key to the notations used throughout the MIN IMP tables in Section A.5 is provided in Table A.5-2.

TABLE A.5-2. Explanation of Numerical Notations

<u>NOTE NUMBER</u>	<u>EXPLANATION</u>
1 -	One of the indicated Surveillance functions must be implemented.
2 -	At least one of these functions must be implemented for reception.
3 -	Required for data forwarding units.
4 -	The applicable PPLI message for the type of unit must be implemented.
5 -	Other functional areas may require implementation of this message for transmission.
6 -	At least one of the indicated Surveillance messages other than the J3.7 message must be implemented.
7 -	At least one of the indicated Surveillance messages must be implemented.
8 -	C ² JUs which coordinate directly with Link 11/11B, NATO Link 1, ATDL-1, or IJMS units must implement this message for reception and display, but for transmission only in response to a request. C ² JUs which originate Link 11/11B TNs, NATO Link 1 TNs, ATDL-1 TNs, and/or IJMS SRNs and/or forward Link 11/11B TNs, NATO Link 1 TNs, ATDL-1 TNs, and/or IJMS SRNs to Link 11 must implement this message.
9 -	C ² JUs are required to implement for transmission their own platform and system status. C ² JUs are required to implement this message for reception the status message(s) appropriate to the unit(s) under their control.
10 -	Required for implementation by units with command authority.
11 -	Implementation of this message is required if the unit is performing precision landing, precision bombing, or RPV control.
12 -	The message required for implementation is dependent on the type of missile being controlled.
13 -	JUs shall implement their own platform and system status.
14 -	Required for implementation when capable of RPV control.
15 -	Notation not used.
16 -	Notation not used.

APPENDIX A

TABLE A.5-2. Explanation of Numerical Notations (continued)

<u>NOTE NUMBER</u>	<u>EXPLANATION</u>
17 -	Provided by the host TDS with the default value in the terminal.
18 -	Required when participating in Net Control Station (NCS) communities.
19 -	Required for NCSs.
20 -	Required for the Crypto Network Manager or Network Manager.
21 -	The Connectivity Quality(s) and Track Number(s) implemented must correspond, that is, Connectivity Quality, n must be implemented with Track Number JU, n, etc.
22 -	Default value is 0.
23 -	Default value is 8191.
24 -	Default value is 2047.
25 -	Must be implemented if Surveillance messages are received.
26 -	Required if NATO Link 1 TNs are implemented. Default value is 0.
27 -	Required if ATDL-1 TNs are implemented. Default value is 0.
28 -	Required if Link 11/11B TNs are implemented. Default value is 0.
29 -	Required if IJMS SRNs are implemented. Default value is 0.
30 -	Required if ATDL-1 TNs or IJMS SRNs are implemented.
31 -	If this field is implemented, the Fuel Function field must be implemented.
32 -	Either IJMS SRNs or ATDL-1 TNs must be implemented.
33 -	At least one of the mode/code applicability indicators must be transmitted/received with its corresponding code. The Mode IV Indicator Applicability field is required for reception if the Mode IV Indicator field is implemented for transmission.
34 -	At least one of the environment/category, special processing simulation, exercise, reference point, electronic warfare or identity filter indicators must be implemented.
35 -	Default value is 63.
36 -	If value 8 is not implemented for reception, then value 10 must not be implemented for reception.

APPENDIX A

TABLE A.5-2. Explanation of Numerical Notations (continued)

<u>NOTE NUMBER</u>	<u>EXPLANATION</u>
37 -	NonC ² JUs must implement for reception either the error value set, the command value set, or both value sets.
38 -	Required for implementation when data link control of autopilot is available.
39 -	Required for transmission and for reception if the Mission Category of Ground Attack/Stores Delivery is implemented. For all other Mission Categories set this field to Value 0.
40 -	Default value is 1.
41 -	Not Used.
42 -	Not Used.
43 -	Not Used.
44 -	The platform data element(s) to be implemented is(are) the same as the Environment/Category of tracks for which the JU implements the Platform field in J3 messages.
45 -	If this field is implemented, then the Land(Ground) Specific Type Indicator must be implemented.
46 -	Required for implementation by C ² units for units under their control.
47 -	This field is mandatory for transmission when the Frequency/Frequency Range Indicator is set to value 1.
48 -	Either the J3.7C3 word or the J3.7C4 word must be implemented.
49 -	If the Emitter Number Field is implemented, this field must be implemented.
50 -	All units must implement Burnable Fuel(FL FCT=0).
51 -	Not Used.
52 -	One of these fields must be implemented.
53 -	If this field is implemented, the Environment/Category field must be implemented.
54 -	This message is not originated by the terminal, but the information is passed through the terminal for transmission.
55 -	Not Used.

MIL-STD-6016B

APPENDIX A

TABLE A.5-2. Explanation of Numerical Notations (continued)

<u>NOTE NUMBER</u>	<u>EXPLANATION</u>
56 -	If Identity or Identity Amplifying Descriptor is implemented, then Exercise Indicator shall be implemented. Default value is 0.
57 -	Either Track Number, Reference or Index Number must be implemented.
58 -	This field must be implemented if either Elevation Angle or Altitude, 25 Ft is implemented.
59 -	Optional for transmission and mandatory for reception if Allied or Hostile Missile Engagement Zones are implemented in Point Type/Point Amplification fields.
60 -	If this field is implemented, then the Air Specific Type Indicator field must be implemented.
61 -	If the Pointer field is set to call attention of another JU to a geographic location, the J12.6E0 word is optional.
62 -	Required when slaved points are implemented.
63 -	Required when either slaved true points or points with independent movement are implemented.
64 -	Required when Line and/or Area is implemented in the Point/Line/Area Descriptor field.
65 -	Required for implementation of nonreal-time tracks. Real-time track implementation is NN.
66 -	N# when Request for Assume Control = 2.
67 -	If the J12.0 message MAD field value 23 is implemented, this Pairing Action field value must be implemented.
68 -	If capable of transmitting a J12.0 message MAD field value 1 and the Objective TN is a tanker, this Pairing Action field value must be implemented.
69 -	If the J12.0 message MAD field value 4 is implemented, this Pairing Action field value must be implemented.
70 -	This MAD field value must be implemented for transmission if a J9.0 message Threat Warning Condition field value 1, White, is implemented for reception.
71 -	This MAD field value must be implemented for transmission if a J9.0 message Threat Warning Condition field value 2, Yellow, is implemented for reception.

APPENDIX A

TABLE A.5-2. Explanation of Numerical Notations (continued)

<u>NOTE NUMBER</u>	<u>EXPLANATION</u>
72 -	This MAD field value must be implemented for transmission if a J9.0 message Threat Warning Condition field value 3, Red, is implemented for reception.
73 -	This MAD field value must be implemented for transmission if the J9.0 message Command field value 14, Proceed to Point, is implemented for reception.
74 -	If this field is implemented, the applicable rate field shall be implemented.
75 -	This MAD field value must be implemented for transmission if the J9.0 message Command field value 16, Conduct Procedures Indicated, and Command Mission field value 1, Search and Rescue; or Command field value 18, Assume Duties Indicated, and Duty Assignment field value 17, Search and Rescue, is implemented for reception.
76 -	This MAD field value must be implemented for transmission if the J9.0 message Command field value 21, Return to Base, is implemented for reception.
77 -	This MAD field value must be implemented for transmission if the J9.0 message Command field value 24, Intervene, is implemented for reception.
78 -	This MAD field value must be implemented for transmission if the J9.0 message Command field value 18, Assume Duties Indicated, and Duty Assignment field value 28, Combat Air Patrol/Antiair Control Unit Control Ship, are implemented for reception.
79 -	If any value other than No Statement is implemented, value 127 must also be implemented. Specific value implementations are delineated in Section 4, Table 4.12-2.
80 -	If the Frequency Exponent field is implemented, this field must be implemented.
81 -	If the Frequency Intercept field is implemented, this field must be implemented.
82 -	Default value is 511.
83 -	If the Ambiguous Type Probability field is implemented, this field must be implemented.
84 -	Required for implementation of units capable of Link 16 control.
85 -	Required for implementation by units capable of voice control only.

APPENDIX A

TABLE A.5-2. Explanation of Numerical Notations (continued)

<u>NOTE NUMBER</u>	<u>EXPLANATION</u>
86 -	Required for implementation by units capable of Link 4A control.
87 -	If the J12.0 message MAD field value 11 is implemented, this WES field value must be implemented.
88 -	If the J12.0 message MAD field value 24 is implemented, this WES field value must be implemented.
89 -	Required if the J3.5C3 word is implemented.
90 -	Required for systems which report tracks of Unknown E/C detected by other than EW means; N22# for all other systems.
91 -	Required for implementation when tracks of Unknown E/C detected by other than EW means are implemented.
92 -	Required when slaved relative points are implemented, or Sonobuoy Type, 1 implemented.
93 -	Because Point Amplifications for Point Type 8 are an extension list of the amplifiers for Point Type 7, they do not include a default (No Statement) value. Therefore, platforms implementing Point Type 8 shall also implement Point Type 7.
94 -	Either the Depth, 15 Meters field or Depth Category field must be implemented.
95 -	Required when repromulgation relay filtering functions are implemented.
96 -	C ² JUs are required to implement for transmission their own platform and system status. C ² JUs are required to implement for reception the platform and system status message(s) appropriate to the unit(s) with whom they coordinate.
97 -	Required for implementation by units with command authority. Mandatory for transmission to a single addressed unit; optional for broadcast transmission with TN Addressee field set to 00177 octal.
98 -	When Point Type = 7 and Point Amplification = 13, value 0 or 4 shall be implemented.
99 -	Required for TACAIR Transport activity.
100 -	One of these values must be implemented, except by TACAIR Transport.
101 -	Not required by TACAIR Transport.
102 -	Mandatory if the J3.6 Space Track message is implemented for transmission of ballistic missile tracks.

APPENDIX A

TABLE A.5-2. Explanation of Numerical Notations (continued)

<u>NOTE NUMBER</u>	<u>EXPLANATION</u>
103	- If implementing the J3.6 Space Track message for ballistic missile tracks for reception only, the implementation is optional. If implementing for transmission and reception, the implementation is mandatory.
104	- Required if Track Number, Related 2 is implemented. Default value is 0.
105	- Required when Point Type = 7, Point Amp = 9 or 10 is implemented; NN otherwise.
106	- Required when Point Type = 7, Point Amp = 11 is implemented; NN otherwise.
107	- If the C2 or C2 and C3 words are implemented, this field must be implemented.
108	- This field is mandatory for implementation if the J13.0C1 word is implemented.
109	- If the J12.0 message MAD field value 16 is implemented, this Pairing Action field value must be implemented.
110	- T for systems reporting friendly interceptor missiles, # otherwise.
111	- T for systems reporting friendly interceptor missiles, # otherwise. If this field is implemented then the Air Specific Type Indicator field must be implemented.
112	- Environment/Category shall be set to other than No Statement/Unknown. Not required for Pointer reports.
113	- All response values are required for implementation.
114	- Required if Sonobuoy Type, 1 implemented, otherwise x/x.
115	- C ² JUs are required to implement for transmission to the SAM unit(s) under their control.
116	- Required for SAM units.
117	- Required if implementing Point Type = 4 and Point Amplification = 3 or 6. When the J3.0C5 is used for this purpose, only the Area Major Axis, 4 field is used and all other fields in the J3.0C5 shall be set to No Statement.

APPENDIX A

A.5.3 LINK 16 FUNCTIONAL MINIMUM IMPLEMENTATION

A system identified as a Link 16 participant must implement the System Information and Network Management function and the PPLI function. These two functions are specified as MIN IMP whether the system is a C² JU or a nonC² JU.

Additional functions that will be implemented by a system because of Service/Agency requirements are specified in MIL-STD-6016, Appendix D, System Implementation. These additional requirements are not MIN IMP for Link 16 Interface participation but are Service/Agency requirements for their own systems. System implementation requirements at each level in the MIN IMP hierarchy must be considered before proceeding into the next lower level of MIN IMP definition.

A.5.4 LINK 16 RELATED FUNCTION MINIMUM IMPLEMENTATION

Link 16 related function MIN IMP can be determined after a system has specified its:

- a. Functional MIN IMP, i.e., the System Information and Network Management function and the PPLI function.
- b. Functional system implementation as described in Appendix D.
- c. Participation on the Link 16 Interface as a C² JU or a nonC² JU.

A system's related function MIN IMP is determined, for C² JUs and nonC² JUs respectively, by entering either Table A.5-3 or Table A.5-4 from the left at each line corresponding to a function implemented by the system. Proceeding to the right across the line, a bullet (o) in a column indicates the named function in that column that is a related function MIN IMP requirement.

APPENDIX A

A.5.5 LINK 16 MESSAGE MINIMUM IMPLEMENTATION

Link 16 message MIN IMP can be determined after a system has specified its:

- a. Functional MIN IMP, i.e., the System Information and Network Management function and the PPLI function.
- b. Functional system implementation as described in Appendix D.
- c. Participation on the Link 16 Interface as a C² JU or a nonC² JU.
- d. Related function MIN IMP.

After using the criteria above to determine its functional implementation a system may determine its message MIN IMP by following the criteria in paragraphs A.5.5.1 through A.5.5.7.

A.5.5.1 TERMINAL BASELINE MESSAGE MINIMUM IMPLEMENTATION

There is a terminal baseline message MIN IMP that is valid for any function being implemented and must be accomplished by a system's terminal. The terminal baseline MIN IMP is defined in terms of a JU's capabilities in Table A.5-5.

A.5.5.2 NET CONTROL STATION MINIMUM IMPLEMENTATION

A system in a Net Control Station Community must follow the MIN IMP in Table A.5-6 in addition to the baseline message MIN IMP defined in Table A.5-5.

A.5.5.3 NETWORK MANAGER MINIMUM IMPLEMENTATION

A JU that is assigned the responsibility of the Network Manager must follow the MIN IMP in Table A.5-7 in addition to the Baseline message MIN IMP defined in Table A.5-5. Requirements are stated with reference to what type of network structure is being used by the Network Manager.

APPENDIX A

A.5.5.4 DISTRIBUTED ROUTING MINIMUM IMPLEMENTATION

A JU participating in distributed routing must follow the MIN IMP in Table A.5-8 in addition to the baseline message MIN IMP defined in Table A.5-5.

A.5.5.5 COMMON MESSAGE MINIMUM IMPLEMENTATION FOR TACTICAL DATA SYSTEMS

The message MIN IMP in Table A.5-9 is valid for any function being implemented.

A.5.5.6 TIME SLOT REALLOCATION MESSAGE MINIMUM IMPLEMENTATION

A JU participating in a Time Slot Reallocation pool must follow the MIN IMP in Table A.5-10 in addition to the baseline message MIN IMP defined in Table A.5-5.

A.5.5.7 C² JU MESSAGE MINIMUM IMPLEMENTATION BY FUNCTION

After a C² JU has determined the functions it will implement, Table A.5-11 should be used to determine message implementation requirements to support those functions. Enter this table from the top at a function that will be implemented by a C² JU. Proceed down the column to determine the combined transmit and receive implementation requirements for each message number identified in the far left column of the table.

A.5.5.8 NONC² JU MESSAGE MINIMUM IMPLEMENTATION BY FUNCTION

After a nonC² JU has determined the functions it will implement, Table A.5-12 should be used to determine message implementation requirements to support those functions. Enter this table from the top at a function that will be implemented by a nonC² JU. Proceed down the column to determine the combined transmit and receive implementation requirements for each message number identified in the far left column of the table.

APPENDIX A

A.5.6 LINK 16 WORD, DATA ELEMENT, AND DATA ITEM MINIMUM IMPLEMENTATION

MIN IMP requirements at the word, data element and data item levels are contained in the tables beginning with Table A.5-J0.0. The tables are arranged by message number order. To determine the word and data element MIN IMP requirements, turn to the table(s) for the appropriate message number. The method of interpreting word, data element, and data item MIN IMP is explained in paragraphs A.5.6.1, A.5.6.2, and A.5.6.3.

APPENDIX A

A.5.6.1 LINK 16 WORD MINIMUM IMPLEMENTATION

Link 16 word MIN IMP can be determined after a system has specified its:

- a. Functional MIN IMP, i.e., the System Information and Network Management function and the PPLI function.
- b. Functional system implementation as described in Appendix D.
- c. Participation on the Link 16 Interface as a C² JU or a nonC² JU.
- d. Related function MIN IMP.
- e. Message MIN IMP.
- f. System implementation of messages (refer to Appendix D), i.e., the additional message implementation requirements defined by the system that are over and above message MIN IMP.

To determine a system's word MIN IMP requirements, turn to the table(s) for the appropriate message number. Under the word level heading, find the list of words contained in the message being examined. Proceed to the right for the MIN IMP symbols (defined in Table A.5-1) corresponding to the word number; the transmit symbols specify the implementation requirements when the message is implemented for transmission, and the receive symbols specify the requirements when the message is implemented for reception. Two columns of symbols are presented where separate word MIN IMP requirements must be defined for C² JUs and nonC² JUs.

Normally, only the criteria above need to be specified in order to determine a system's word MIN IMP. However, special cases exist in this appendix in which both data item MIN IMP and data item system implementation for a particular data element must be used to determine word MIN IMP for a message. This occurs when a data element contains action values that change the purpose or use of a message. The word MIN IMP varies with the values (data items) of the action field (data element). Individual instructions are

APPENDIX A

provided for interpreting the word, data element, and data item MIN IMP when this condition exists.

A.5.6.2 LINK 16 DATA ELEMENT MINIMUM IMPLEMENTATION

To determine data element MIN IMP, the procedures in paragraph A.5.7.1 must first be followed to determine word MIN IMP; additionally, Appendix D must be referenced to determine what additional words must be implemented. With a combined list containing word MIN IMP and word system implementation, turn to the table(s) for the appropriate message number. Under the data element level heading and the word number subheading is the list of data elements for that word. Proceed to the right for the MIN IMP symbols (defined in Table A.5-1) for each data element; the transmit symbols specify the implementation requirements when the word is implemented for transmission, and the receive symbols specify the requirements when the word is implemented for reception. Two columns of symbols are presented where separate data element MIN IMP requirements must be defined for C² JUs and nonC² JUs.

A.5.6.3 LINK 16 DATA ITEM MINIMUM IMPLEMENTATION

Normally, when a data element is required to meet MIN IMP requirements, only one data item other than the "no statement" value is required to satisfy MIN IMP requirements. Data item MIN IMP is only specified if additional data items exist that are mandatory within a data element. When this condition exists, MIN IMP is specified for each either as mandatory or nonmandatory.

To determine the data item MIN IMP, the procedures in paragraphs A.5.7.1 and A.5.7.2 must first be followed to determine the requirements for the MIN IMP hierarchy down through the data element level. Then Appendix D must be referenced to determine data element system implementation, i.e., the additional data element implementation requirements defined by the system that are over and above data element MIN IMP. With a combined list containing data element MIN IMP and data element system implementation, turn to the table(s) for the appropriate message number. If data item MIN IMP is not specified for any given data element, it can be assumed that only one data item other than the "no statement" value is required to satisfy MIN IMP requirements. Where data item MIN IMP is specified, it is possible to have

APPENDIX A

two columns of symbols, one for C² JUs data item MIN IMP and one for nonC² JU data item MIN IMP (which may be represented on the tables by the acronym NC² JU).

A.5.7 MESSAGE AND PURPOSE

Table A.5-15 Link 16 Message and Purpose Listing provides a listing of all Link 16 messages and purposes for use as references when examining minimum implementation.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 1 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J0.0	Initial Entry Message	The J0.0 Initial Entry message provides the data elements, in a known time slot, required for network entry.
J0.1	Test Message	The J0.1 Test message is used for terminal test and performance evaluation.
J0.2	Network Time Update Message	The J0.2 Network Time Update message adjusts the system time to a standard time.
J0.3	Time Slot Assignment Message	The J0.3 Time Slot Assignment message is used to permit dynamic assignment of time slots to JUs by a responsible JU.
J0.4	Radio Relay Control Message	The J0.4 Radio Relay Control message provides the means for the JU responsible for relay control to assign and deassign the paired slot radio relay function to a JTIDS/MIDS terminal and to control the relay function parameters.
J0.5	Repromulgation Relay Message	The J0.5 Repromulgation Relay message is used to request that those messages in the same time slot containing the J0.5 message be relayed by all JUs receiving the message.
J0.6	Communications Control Message	The J0.6 Communications Control message shall be used to initiate or terminate specific transmissions, to control communications and to request network management actions.
J0.7	Time Slot Reallocation Message	The J0.7 Time Slot Reallocation message provides the capability for a JU to request a percentage of time slots from a shared pool and disseminate the requests of other JUs.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 2 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J1.0	Connectivity Interrogation Message	The J1.0 Connectivity Interrogation message is used to solicit direct or indirect connectivity of the addressed JUs to support route establishment.
J1.1	Connectivity Status Message	The J1.1 Connectivity Status message is used to disseminate direct or multilevel connectivity of the source JUs.
J1.2	Route Establishment Message	The J1.2 Route Establishment message is used to establish a route for relay/destination control.
J1.3	Acknowledgement Message	The J1.3 Acknowledgement message is used by a JU involved in ground-to-ground communications to respond to messages which require machine receipt/compliance.
J1.4	Communicant Status Message	The J1.4 Communicant Status message is used by JUs to report the connectivity quality of its direct communicants to other direct communicants and to the designated Net Control Station.
J1.5	Net Control Initialization Message	The J1.5 Net Control Initialization message is used to provide a number of initial terminal parameters required to allow a terminal to actively participate in an established net under the control of a dynamic net manager.
J1.6	Needline Participation Group Assignment Message	The J1.6 Needline Participation Group Assignment message is used by the designated NCS to assign an addressed JU its associated destination Source TNs with PG numbers to form Needline PGs.

A-45

APPENDIX A

MIL-STD-6016B

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 3 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J2.0	Indirect Interface Unit PPLI Message	The J2.0 Indirect Interface Unit PPLI message is used to provide Participating Unit/Reporting Unit information on the Link 16 network when network participation status, identification, and positional information is forwarded from Link 11/11B links.
J2.2	Air PPLI Message	The J2.2 Air PPLI message is used to provide all JUs information about airborne JUs on the Link 16 network. It is used by airborne JUs to provide network participation status, identification, positional information and relative navigation information.
J2.3	Surface (Maritime) PPLI Message	The J2.3 Surface (Maritime) PPLI message is used to provide all JUs information about surface (maritime) JUs on the Link 16 network. It is used by surface (maritime) JUs to provide network participation status, identification, positional information, and relative navigation information.
J2.4	Subsurface (Maritime) PPLI Message	The J2.4 Subsurface (Maritime) PPLI message is used to provide all JUs information about subsurface (maritime) JUs on the Link 16 network. It is used by subsurface (maritime) JUs to provide network participation status, identification, positional information, and relative navigation information.
J2.5	Land (Ground) Point PPLI Message	The J2.5 Land (Ground) Point PPLI message is used to provide all JUs information about stationary ground JUs on the Link 16 network. It is used by stationary ground JUs to provide network participation status, identification, positional information and relative navigation information.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 4 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J2.6	Land (Ground) Track PPLI Message	The J2.6 Land (Ground) Track PPLI message is used to provide all JUs information about mobile ground JUs on the Link 16 network. It is used by mobile ground JUs to provide network participation status, identification, positional information, and relative navigation information.
J3.0	Reference Point Message	The J3.0 Reference Point message is used to exchange tactical information about geographic references.
J3.1	Emergency Point Message	The J3.1 Emergency Point message is used to provide the location and type of an emergency that requires search and rescue.
J3.2	Air Track Message	The J3.2 Air Track message is used to exchange information on air tracks.
J3.3	Surface (Maritime) Track Message	The J3.3 Surface (Maritime) Track message is used to exchange information on surface (maritime) tracks.
J3.4	Subsurface (Maritime) Track Message	The J3.4 Subsurface (Maritime) Track Message is used to exchange information on subsurface (maritime) tracks and DATUMs.
J3.5	Land (Ground) Point/ Track Message	The J3.5 Land (Ground) Point/track Message is used to exchange tactical surveillance information on land (ground) points and tracks.
J3.6	Space Track Message	The J3.6 Space Track message is used to exchange information on Space and Ballistic Missile tracks.

A-47

APPENDIX A

MIL-STD-6016B

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 5 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J3.7	Electronic Warfare Product Information Message	The J3.7 Electronic Warfare Product Information message provides the means to exchange tactically significant information that has been derived from electromagnetic sources.
J5.4	Acoustic Bearing/Range Message	The J5.4 Acoustic Bearing/Range Message is used to report acoustic bearing and range of subsurface (maritime) contacts.
J6.0	Amplification Message	The J6.0 Amplification message is used to exchange amplifying information, to include threat information, within the interface.
J7.0	Track Management Message	The J7.0 Track Management Message is used to transmit information necessary to effect management actions on tracks being reported within the interface. Management actions include dropping tracks, reporting environment/category and identity conflicts, changing environment/category and identity, changing alert status, and changing strength.
J7.1	Data Update Request Message	The J7.1 Data Update Request Message is used to request tactical information that has been locally generated by units participating within the interface.
J7.2	Correlation Message	The J7.2 Correlation Message is used to resolve a dual designation problem by identifying one track to be retained and another to be dropped.
J7.3	Pointer	The J7.3 Pointer Message is used to transmit a geographic position to an addressed unit within the interface.

A-48

APPENDIX A

MIL-STD-6016B

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 6 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J7.4	Track Identifier Message	The J7.4 Track Identifier Message is used to transmit special identification numbers associated with the reference TN.
J7.5	IFF/SIF Management Message	The J7.5 IFF/SIF Management Message is used to transmit IFF/SIF information or a special code on a referenced track. Provisions are available to obtain the most current information by exchanging, clearing, or updating IFF/SIF data between units within the interface.
J7.6	Filter Management	The J7.6 Filter Management Message is used to report filter definitions, filter descriptions, and filter deletions. Filter definition reports describe the filter parameters requested to be implemented. Filter description reports indicate the filter parameters currently implemented by a system. Filter delete reports are requests to cancel currently implemented filters.
J7.7	Association Message	The J7.7 Association Message is used to transmit information, on two or more TNs, that has been automatically or manually associated when the information is deemed to pertain to the same contact. When a determination is made that the above relationship no longer exists, there is a provision for terminating this information association.
J8.0	Unit Designator Message	The J8.0 Unit Designator message is used to transmit to a terminal (from its NCS) the unit designator associated with the TNs in the terminal's Participation Group assignments. The message will also be used to inform an NCS of a terminal's unit designator.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 7 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J8.1	Mission Correlator Change Message	The J8.1 Mission Correlator Change message is used to add, delete, or change the mission correlator on a specific aircraft or flight of aircraft.
J9.0	Command Message	The J9.0 Command Message provides the means to transmit threat warning conditions, alert states, and weapons condition orders, to direct weapon system engagement for air defense/air support, and to direct antisubmarine warfare (ASW) operations.
J9.1	Engagement Coordination Message	The J9.1 Engagement Coordination message provides the means for two or more elements to coordinate engagements in order to conduct more efficient engagements and to reduce the probability of wasted resources.
J10.2	Engagement Status Message	The J10.2 Engagement Status Message provides the status of an engagement between the Reference TN and the Target TN.
J10.3	Handover Message	The J10.3 Handover Message is used to transfer control of aircraft and Remotely Piloted Vehicles/Missiles between controlling units.
J10.5	Controlling Unit Report Message	The J10.5 Controlling Unit Report Message is used to identify the JU that is controlling the track and to provide the mission correlator and/or voice call sign if applicable.
J10.6	Pairing Message	The J10.6 Pairing Message provides a means to indicate a pairing (not engagement status) between a friendly track and another track or point.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 8 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J12.0	Mission Assignment Message	The J12.0 Mission Assignment Message is used by C ² JUs to assign missions, designate targets, and provide target information to nonC ² JU platforms. Provision is made for the nonC ² JU platforms to acknowledge the message through receipt/compliance action.
J12.1	Vector Message	The J12.1 Vector Message is used by C ² JUs to send vector information and vector discretetes specifically to air units operating on its net. Vectors are given for interception of air targets, navigation, and air traffic control.
J12.2	Precision Aircraft Direction Message	The J12.2 Precision Aircraft Direction Message is used by controlling units for operations requiring precise control positioning of mission aircraft (for example, ground directed release of ordnance, automatic carrier landing operations, air cargo delivery, and Remotely Piloted Vehicle operations).
J12.3	Flight Path Message	The J12.3 Flight Path Message is used by controlling units to provide air units with multiple-leg flight path information.
J12.4	Controlling Unit Change Message	The J12.4 Controlling Unit Change Message is used to provide new control agency information to an aircraft prior to handoff to the new control agency. It is also used by a tactical aircraft to initiate control procedures with a new controlling unit or to effect a change of controlling unit in response to a controlling unit change order or by a C ² JU to initiate control by own unit.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 9 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J12.5	Target/Track Correlation Message	The J12.5 Target/Track Correlation Message is used by controlling C ² JUs to (a) correlate a target and a track, (b) decorrelate a target and a track, and (c) correlate multiple targets with a track.
J12.6	Target Sorting Message	The J12.6 Target Sorting message is used to (a) enable nonC ² JUs to exchange targets and targeting information among themselves, (b) pass sensor data to C ² JUs and among nonC ² JUs, (c) pass nonC ² JU engagement status information between nonC ² JUs and from nonC ² JUs to C ² JUs, and (d) provide control among nonC ² JUs.
J12.7	Target Bearing Message	The J12.7 Target Bearing message is used by nonC ² JUs to exchange target reports using polar coordinates and may include range, bearing, elevation, rate and uncertainty data.
J13.0	Airfield Status Message	The J13.0 Airfield Status message is used to report operational status of airfields, runways, airfield facilities, and aircraft carrier flight decks.
J13.2	Air Platform and System Status Message	The J13.2 Air Platform and System Status Message provides the current status of an air platform to include ordnance load, fuel, operational status, and on board systems' status.
J13.3	Surface (Maritime) Platform and System Status Message	The J13.3 Surface (Maritime) Platform and System Status Message provides the current status of a surface (maritime) platform to include ordnance load, operational status, and on board systems' status.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 10 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J13.4	Subsurface (Maritime) Platform and System Status Message	The J13.4 Subsurface (Maritime) Platform and System Status message provides the current status of a subsurface (maritime) platform to include operational status and on board systems' status.
J13.5	Land (Ground) Platform and System Status Message	The J13.5 Land (Ground) Platform and System Status Message provides the current operational weapons and equipment status of a land (ground) platform.
J14.0	Parametric Information Message	The J14.0 Parametric Information message provides the means to exchange parametric information that has been derived from electromagnetic sources.
J14.2	Electronic Warfare Control/Coordination Message	The J14.2 Electronic Warfare Control/Coordination message provides the means for EW participants to coordinate EW activities among one another.
J15.0	Threat Warning Message	The J15.0 Threat Warning Message provides the capability for threat warning to targeted friendly platforms to include threat type, threat posture, position/relative position, altitude, and speed.
J17.0	Weather Over Target Message	The J17.0 Weather Over Target message provides the current weather conditions over a target area.
J28.0	U.S. National 1 (Army)	The J28.0 U.S. National 1 (Army) message purpose is specified in the appropriate U.S. Army documentation.
J28.1	U.S. National 2 (Navy)	The J28.1 U.S. National 2 (Navy) message purpose is specified in the appropriate U.S. Navy documentation.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 11 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J28.2	U.S. National 3 (Air Force)	The J28.2 U.S. National 3 (Air Force) message purpose is specified in the appropriate U.S. Air Force documentation.
J28.20	Text Message	The J28.20 Text message provides the means to convey alphanumeric text information via datalink.
J28.3	U.S. National 4 (Marine Corps)	The J28.3 U.S. National 4 (Marine Corps) message purpose is specified in the appropriate U.S. Marine Corps documentation.
J28.4	FR National 1	The J28.4 FR National 1 message purpose is specified in the appropriate French documentation.
J28.5	FR National 2	The J28.5 FR National 2 message purpose is specified in the appropriate French documentation.
J28.6	U.S. National 5 (NSA)	The J28.6 U.S. National 5 (NSA) message purpose is specified in the appropriate NSA documentation.
J28.7	UK National 1	The J28.7 U.K. National 1 message purpose is specified in the appropriate U.K. documentation.
J29.1	UK National 2	The J29.1 U.K. National 2 message purpose is specified in the appropriate U.K. documentation.
J29.3	SP National 1 Message	The J29.3 SP National 1 message purpose is specified in the appropriate SP documentation.
J29.4	SP National 2 Message	The J29.4 SP National 2 message purpose is specified in the appropriate SP documentation.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 12 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J29.5	CA National Message	The J29.5 CA National message purpose is specified in the appropriate CA documentation.
J29.7	AU National Message	The J29.7 AU National message purpose is specified in the appropriate AU documentation.
J30.0	GE National 1 Message	The J30.0 GE National 1 message purpose is specified in the appropriate German documentation.
J30.1	GE National 2 Message	The J30.1 GE National 2 message purpose is specified in the appropriate German documentation.
J30.2	IT National 1 Message	The J30.2 IT National 1 message purpose is specified in the appropriate IT documentation.
J30.3	IT National 2 Message	The J30.3 IT National 2 message purpose is specified in the appropriate IT documentation.
J30.4	IT National 3 Message	The J30.4 IT National 3 message purpose is specified in the appropriate IT documentation.
J30.5	FR National 3 (Army) Message	The J30.5 FR National 3 message purpose is specified in the appropriate French documentation.
J30.6	FR National 4 (Air Force) Message	The J30.6 FR National 4 message purpose is specified in the appropriate French documentation.
J30.7	FR National 5 (Navy) Message	The J30.7 FR National 5 message purpose is specified in the appropriate French documentation.

TABLE A.5-15. Link 16 Message and Purpose Listing (Sheet 13 of 13)

<u>MESSAGE NUMBER</u>	<u>MESSAGE TITLE</u>	<u>PURPOSE</u>
J31.0	Over-the-Air Rekeying Management Message	The J31.0 Over-the-air Rekeying Management Message is used to exchange cryptonet management information for rekeying the KGV-8.
J31.1	Over-the-Air Rekeying Message	The J31.1 Over-the-air Rekeying Message is used to transmit the new cryptovariables.
J31.7	No Statement Message	The J31.7 No Statement Message is used to fill out the remainder of a transmission opportunity when the messages to be transmitted do not require the full number of Reed-Solomon code words.
RTT-A	RTT Interrogation- Addressed Message	The RTT Interrogation-Addressed message provides the means for a JTIDS/MIDS terminal to synchronize with system time using the active synchronization procedure. A specific terminal is interrogated and responds with the RTT Reply.
RTT-B	RTT Interrogation- Broadcast Message	The RTT Interrogation-Broadcast message provides the means for a JTIDS/MIDS terminal to synchronize with system time using the active synchronization procedure. The RTT-B is not addressed to any particular terminal. Any terminal that meets the specified requirement for time quality level responds with the RTT Reply.
RTT-REP	RTT Reply Message	The RTT Reply message provides the means for a JTIDS/MIDS terminal to support the active synchronization procedure by providing time-of-arrival data in response to either an RTT-A or RTT-B Interrogation.

J3.5 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J3.5 message that are required for implementation, first, enter Table A.5-J3.5-1 from the left to determine the implementation for each Point/Track Indicator value by a C^2 JU or a non C^2 JU. Next, enter Table A.5-J3.5-2 from the left at each value that will be implemented and proceed across the row to determine the required word implementation by a C^2 JU or a non C^2 JU. Then, enter Table A.5-J3.5-3 from the top at an action value that will be implemented and proceed down the column to determine the required data element implementation for each word by a C^2 JU or a non C^2 JU. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J3.7 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J3.7 message that are required for implementation, first, enter Table A.5-J3.7-1 from the left to determine the implementation for each Fix or Bearing Descriptor value. Next, enter Table A.5-J3.7-2 from the left at each value that will be implemented and proceed across the row to determine the required word implementation. Then, enter Table A.5-J3.7-3 from the top at an action value that will be implemented and proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

MIL-STD-6016B

J9.0 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J9.0 message that are required for implementation, first, enter Table A.5-J9.0-1 from the top at a Mission Category that will be implemented to determine the implementation requirements for each action value. Next, enter Table A.5-J9.0-2 from the left at an action value that will be implemented. Proceed across the row to determine the required word implementation. Then, enter Table A.5-J9.0-3 from the top at an action value that will be implemented. Proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J10.6 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J10.6 message that are required for implementation, first, enter Table A.5-J10.6-1 from the top at a Mission Category that will be implemented to determine the implementation requirements for each action value. Next, enter Table A.5-J10.6-2 from the left at an action value that will be implemented. Proceed across the row to determine the required word implementation. Then, for any implemented action value enter Table A.5-J10.6-3 and proceed down the column to determine the required data element implementation. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

APPENDIX A

J12.0 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J12.0 message that are required for implementation, first, enter Table A.5-J12.0-1 from the top at a Mission Category that will be implemented by a C² JU or a nonC² JU to determine the implementation requirements for each action value. Next, enter Table A.5-J12.0-2 from the left at an action value that will be implemented. Proceed across the row to determine the required word implementation for a C² JU or a nonC² JU. When interpreting this table a system must also take into consideration the Mission Category(s) it is implementing. If implementing ATC, AIC, MSL/RPV, SAM UNIT CONTROL, or EW, the J12.0C3, J12.0C4, and J12.0C6 columns of table A.5-J12.0-2 should be disregarded. All other columns are applicable. Then, enter Table A.5-J12.0-3 from the top at an action value that will be implemented by a C² JU or a nonC² JU. Proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J12.2 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J12.2 message that are required for implementation, first, enter Table A.5-J12.2-1 from the top at a Mission Category that will be implemented by a C² JU or a nonC² JU to determine the implementation requirements for each action value. Next, enter Table A.5-J12.2-2 from the left at an action value that will be implemented. Proceed across the row to determine the required word implementation for a C² JU or a nonC² JU. Then, enter Table A.5-J12.2-3 from the top at an action value that will be implemented by a C² JU or a nonC² JU. Proceed down the column to determine the required data element implementation for the A.5-J12.2I word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J12.3 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J12.3 message that are required for implementation, first, enter Table A.5-J12.3-1 from the top at a Mission Category that will be implemented by a C² JU or a nonC² JU to determine the implementation requirements for each action value. Next, enter Table A.5-J12.3-2 from the left at an action value that will be implemented. Proceed across the row to determine the required word implementation for a C² JU or a nonC² JU. Then, enter Table A.5-J12.3-3 from the top at an action value that will be implemented by a C² JU or a nonC² JU. Proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J12.6 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J12.6 message that are required for implementation, first, enter Table A.5-J12.6-1 from the top at an Environment/Category (ENV/CAT) that will be implemented by a C² JU or a nonC² JU to determine the implementation requirements for each Status Information Discrete (SID) value for a specific ENV/CAT. Next, enter Table A.5-J12.6-2 from the left at a SID value that will be implemented. Proceed across the row to determine the required word implementation for a C² JU or a nonC² JU. Then, enter Table A.5-J12.6-3 from the top at a SID value that will be implemented by a C² JU or a nonC² JU. Proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J14.0 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J14.0 message that are required for implementation, first, enter Table A.5-J14.0-1 from the left to determine the implementation for each Fix or Bearing Descriptor value. Next, enter Table A.5-J14.0-2 from the left at each value that will be implemented and proceed across the row to determine the required word implementation. Then, enter Table A.5-J14.0-3 from the top at an action value that will be implemented and proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J14.2 Word, Data Element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the J14.2 message that are required for implementation, first, enter Table A.5-J14.2-1 from the left to determine the implementation requirements for each action value. Next, enter Table A.5-J14.2-2 from the left at an action value that will be implemented. Proceed across the row to determine the required word implementation for EW net participants. Then, enter Table A.5-J14.2-3 from the top at an action value that will be implemented. Proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

J31.0 word, Data element, and Data Item Minimum Implementation

To determine the words, data elements, and data items in the message that are required for implementation, first, enter Table A.5-J31.0-1 from the left to determine the implementation requirements for each action code. Next, enter Table A.5-J31.0-2 from the left at an action code that will be implemented. Proceed across the row to determine the required word implementation. Then, enter Table A.5-J31.0-3 from the top at an action code that will be implemented. Proceed down the column to determine the required data element implementation for each word. At each level, the transmit and receive requirements are considered separately, with no interaction between them.

APPENDIX B

APPENDIX B GROUP

B.1 SCOPE

This document contains the data elements used in Link 16. The data elements are uniquely specified by two numbers, the Data Field Identifier (DFI) and its Data Use Identifier (DUI). The DFI includes a single concept and is the generic representation of the DUIs grouped under it. The DUIs, which are representative of the DFI concept, contain the Data Items (DIs) used to compose the data element. The DFIs are listed in numerical sequence. Alphabetical and numerical indexes of the DFIs and DUIs are included before the first DFI.

B.2 APPLICABLE DOCUMENTS

The documents listed in section 2 of this standard are applicable to this appendix.

B.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

B.4 GENERAL REQUIREMENTS

B.4.1 RULES AND CONVENTIONS

This section describes the structure and use of DFIs, DUIs, and DIs as well as the related data to be used in developing data elements.

B.4.1.1 GENERAL

a. Every special character used in the formatting of a DFI shall have a predetermined meaning.

b. Use readily understood terms.

APPENDIX B

c. Acronyms may be used as part of a name, but must be spelled out in the definition or explanation.

d. DFI and DI names shall be as short as practicable.

B.4.1.2 DFI

All DFIs must have at least one associated DUI.

B.4.1.2.1 DFI NAME

a. Each DFI name shall be unique.

b. The DFI name shall identify a single concept.

c. The DFI name shall be a generic representation of the contained DUIs.

d. The DFI name shall be singular.

e. Group words (type, category, degree, designator, etc.) in DFI names shall follow modifying words and phrases, e.g., "Aircraft Type" rather than "Type of Aircraft."

B.4.1.2.2 DFI DEFINITION

a. The DFI definition shall be provided only when necessary for amplification.

b. The DFI definition shall be a generic definition of the concept represented by the associated DUIs.

c. The DFI definition shall attempt to use definitions from previously accepted standards.

d. The DFI definition shall be based on a review of all appropriate definition sources.

APPENDIX B

B.4.1.3 DUI

All DUIs must have associated DIs.

B.4.1.3.1 DUI NAME

- a. Each DUI name shall be unique.
- b. All DUI names shall be singular.
- c. Parallelism of phraseology of all DUI names within the DFI shall be preserved.
- d. DUI names shall be representative of the DFI concept.

B.4.1.3.2 FIELD DESCRIPTOR

Field descriptors shall be provided for all DUIs whose name will not fit within the allocated space in the word map (Section 5).

B.4.1.3.3 DUI EXPLANATION

- a. A DUI explanation shall exist for each DUI.
- b. A DUI explanation shall not be a restatement of the name.
- c. A DUI explanation shall not be solely an example.

B.4.1.4 DI

- a. Split DUIs shall be indicated by a virgule between the DUI numbers, e.g., "FOR DUI 001/005."
- b. Ranges of DUIs shall be indicated by a dash between the inclusive DUI numbers, e.g., "FOR DUIs 003-006."

APPENDIX B

B.4.1.4.1 DI NAME

- a. Within a DUI, each DI shall have a specific name and meaning.
- b. DIs shall be consistent with the explanation of the DUI.

B.4.1.4.2 BIT CODES

a. Bit codes shall be expressed in decimal with the exception of DIs that are displayed to the operator in octal, e.g., IFF/SIF. When the bit code is octal, a notation shall be made to indicate that octal values are used.

b. Within a DUI, each DI shall be represented by a unique bit code and have a specific meaning.

B.4.1.4.3 DI EXPLANATION

a. The DI explanation shall be provided only when necessary for amplification.

b. The DI explanation shall attempt to use explanations from previously accepted standards.

c. The DI explanation shall be based upon a review of all appropriate sources.

d. The DI explanation shall not be a restatement of the name unless it is spelling out an acronym.

e. When a DI name is "NUMERIC," the DI explanation must contain a description of what the DI represents. For example:

<u>Data Item</u>	<u>Bit Code</u>	<u>Explanation</u>
(NUMERIC) (SEE EXPLANATION)	(0 THROUGH 127)	Explanation. . .

APPENDIX B

f. In expressing numerical quantities, the following are the type of entries required:

<u>Data Item</u>	<u>Bit Code</u>	<u>Explanation</u>
(0 THROUGH 511 3/4 DATA MILES (NO STATEMENT) (-511 3/4 THROUGH -1/4 DATA MILES)	(0 THROUGH 2047) (2048) (2049 THROUGH 4095)	Distance in 1/4 data mile increments

B.4.1.4.4 GENERIC DATA ITEMS ENTRIES

<u>Term</u>	<u>Meaning</u>
DISUSED	A DI value that was previously named but is no longer valid. A DISUSED value cannot be renamed without determining if coordinated implementation is required.
UNDEFINED	A term used to describe a bit code that has no value currently assigned but may have a value assigned in the future. (This occurs in logically coded items (DUIs) in which all the DIs in the DUI do not have assigned values.)
ILLEGAL	A term used to describe a bit code that is not a permissible entry into the tactical data system(s) supporting the interface, e.g., a 9 bit DUI called HEADING that has legal values of 0 through 359 representing degrees has illegal values of 360 through 511.
NO STATEMENT	A DI that indicates no information on this DUI is being transmitted. (This does not necessarily indicate that the originator does not have the information.)
UNKNOWN	A DI that indicates other values available for this DUI have not been determined by the originator.
TO BE DETERMINED	DI design is incomplete. (DI names and bit codes will be specified at a later time.)

APPENDIX B

B.4.1.4.5 NO STATEMENT ASSIGNMENT

When two options are shown, the binary value 0 shall be used as NO STATEMENT except when the binary value 0 has a valid numeric value, in which case the highest binary value shall be used.

The following examples of a 3 bit DUI show the proper assignment (indicated by an asterisk) of the NO STATEMENT DI name:

<u>Binary Value</u>	<u>Logical</u>	<u>Unsigned</u>	<u>Sign+ Magnitude</u>	<u>Twos Complement</u>	<u>Mod Twos Complement</u>	<u>Ones Complement</u>
000	a*	0	+0	0	-4*	+0
001	b	1	+1	+1	-3	+1
010	c	2	+2	+2	-2	+2
011	d	3	+3	+3	-1	+3
100	e	4	-0*	-4*	0	-3
101	f	5	-1	-3	+1	-2
110	g	6	-2	-2	+2	-1
111	h*	7*	-3	-1	+3	-0*

B.4.1.5 DEFINITION OF SYMBOLS THAT CAN BE USED IN DFI AND DUI NAME

- a. Hyphen (-) shall be used in compound terms.
- b. Virgule (/) shall be used with bona fide acronyms and in the expression "and/or" only.
- c. Parentheses () shall be used to enclose an acronym when both title and acronym are included in name.
- d. Comma (,) shall be used in its normal sense.
- e. No other symbols shall be used.

B.4.2 DESCRIPTION

Figure B-1 shows the format of the DFI information that can be displayed on individual DFIs. In order to explain the information in the DFI listings, the paragraphs following Figure B-1 are keyed to the numbers in the figure,

APPENDIX B

i.e., the parenthetical numbers to the left of the text correspond to the bold parenthetical numbers in Figure B-1.

In the figure, all information is in capital letters; parentheses and dashes are exactly as printed in the listing. Zs indicate zero suppression, 9s indicate numerics, and Xs indicate alphanumerics.

(1) Classification. The highest classification of the information contained on that page is printed at the top and bottom of each page. Each paragraph has its classification printed to the left in parentheses. US markings are one character in length, and NATO markings are two characters.

(2) DFI Number. The DFI number is printed at both the top and bottom of each page. The DFI number consists of a maximum of 4 digits with the first leading zero suppressed.

(3) DFI Name. The DFI name is printed at the top of each page. The DFI name is limited to a maximum of 30 alphanumerics for the first line and a maximum of 28 for the second line.

(4) DFI Definition. The DFI definition is used only when the meaning of the DFI is unclear. It consists of a maximum of 62 alphanumerics for the first line and 60 for the second through tenth lines (a maximum of 10 lines).

(5) Data Standard Usage. This information indicates the name of those standards using this DFI. It consists of 9 alphanumerics followed by a space with a maximum of three 9 character groups per line and a maximum of 3 lines.

(6) Status. This element identifies the current status of the DFI. It consists of a maximum of 3 lines of alphanumerics with a maximum of 20 characters per line.

(7) DUI Number. The DUI number consists of 3 digits with no suppression.

(8) DUI Name. The DUI name consists of a maximum of 30 alphanumerics for the first line and a maximum of 28 alphanumerics for the second line.

APPENDIX B

(9) DUI Explanation. The DUI explanation consists of a maximum of 36 alphanumerics for the first line and 34 alphanumerics for all following lines with a maximum of 999 lines.

(10) Word Applicability. This element identifies the word(s) (See Section 5, Paragraph 5.4) that use the DUI it appears with. It consists of a maximum of 999 lines per DUI with 3 words per line.

(11) Change Bars. Change bars appear to the right of a line that has changed from a previous edition.

(12) Bit. This element identifies the number of bits that make up the DUI. It consists of 3 digits with leading zeros suppressed.

(13) Field Descriptor. The field descriptor is an abbreviation used in place of the DUI name when the DUI name will not fit in the allocated space of a word map. The maximum number of alphanumerics is determined by the DUI bit size as follows:

- a. For a 1 bit field, 2 lines of 3 characters each.
- b. For a 2 bit field, 3 lines of 7 characters each.
- c. For a 3 bit field, 3 lines of 11 characters each.
- d. For a 4 or more bit field, 3 lines of 15 characters each.

If a field descriptor does not exist for a DUI, this element will be blank.

(14) Ultra Header DI Qualifier. This is a qualifier for the DIs that follow and is composed of one line with a maximum of 68 alphanumeric characters.

(15) Major Header DI Qualifier. This is a qualifier for the DIs that follow and is composed of a maximum of five lines. The first line contains a maximum of 24 alphanumeric characters, and the second through the fifth lines each contain a maximum of 22 alphanumeric characters.

APPENDIX B

(16) Subheader DI Qualifier. This is a qualifier for the DIs that follow and is composed of a maximum of five lines. The first line contains a maximum of 24 alphanumeric characters, and the second through the fifth lines each contain a maximum of 22 alphanumeric characters.

(17) Page Number. A sequence number (beginning with one for each DFI) showing the page number within the total number of pages for the DFI. The page number consists of a maximum of 3 digits with leading zeros suppressed.

(18) DI Name. The DI name is composed of a maximum of 999 lines. The first line consists of a maximum of 24 alphanumeric characters, and the remaining lines each contain a maximum of 22 characters.

(19) DI Bit Code. The DI bit code is the numeric value corresponding to the associated DI name. It consists of 999 lines with each line consisting of a maximum of 24 alphanumeric characters. It is normally specified in decimal. It is specified in octal only for those data elements that are normally displayed in octal digits.

(20) DI Explanation. The DI explanation consists of a maximum of 999 lines. The first line consists of a maximum of 36 alphanumeric characters, and the remaining lines each contain a maximum of 34 characters.

B.5 DETAILED REQUIREMENTS

B.5.1 INDEX OF DFIs AND DUIs

To assist in using this standard, four listings immediately follow this page. The first list, Table B-1, is ordered alphabetically by DFI name, the second list, Table B-2, is ordered numerically by DFI number, the third, Table B-3, is ordered alphabetically by DUI name, and the fourth, Table B-4, is ordered numerically by DUI number. Each table also contains the revision date of the DFI.

DFI	NAME	DEFINITION
264	VOICE CALL	AN ALPHANUMERICALLY-CODED CALL SIGN USED IN VOICE COMMUNICATIONS TO IDENTIFY A FORCE ELEMENT. THE CALL SIGN CONSISTS OF FOUR CHARACTERS CODED AS SIX BITS PER CHARACTER, EACH OF WHICH MAY REPRESENT EITHER A LETTER OF THE ALPHABET OR A DECIMAL NUMBER 0-9.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 VOICE CALL SIGN [24 BIT]	AN ALPHANUMERICALLY-CODED CALL SIGN USED IN VOICE COMMUNICATIONS TO IDENTIFY A FORCE ELEMENT.	J2.2C2 J2.5C1 J10.3E0	J2.3C2 J2.6C1 J10.5I	J2.4C2 J9.0C1
003 VOICE CALL SIGN, NEW CONTROL AGENCY [24 BIT]	AN ALPHANUMERICALLY-CODED CALL SIGN USED IN VOICE COMMUNICATIONS TO IDENTIFY THE NEW CONTROL AGENCY.	J12.4E0		

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 001 AND 003 -----

THE 24 BITS ARE DIVIDED INTO FOUR GROUPS OF 6 BITS. EACH GROUP IS INTERPRETED INDEPENDENTLY IN ACCORDANCE WITH THE FOLLOWING CODE:

DFI NAME
268 ES FREQUENCY BAND STATUS

DEFINITION
INDICATES THE ABILITY OF ANY ES EQUIPMENT TO OPERATE IN THE
FREQUENCY BAND(S) OR FREQUENCY RANGE(S) SPECIFIED.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 ES FREQUENCY BAND A [2 BIT] (ES A)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 0 THROUGH 250 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
002 ES FREQUENCY BAND B [2 BIT] (ES B)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 250 THROUGH 500 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
003 ES FREQUENCY BAND C [2 BIT] (ES C)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 500 THROUGH 1000 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
004 ES FREQUENCY BAND D [2 BIT] (ES D)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 1000 THROUGH 2000 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
005 ES FREQUENCY BAND E [2 BIT] (ES E)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 2000 THROUGH 3000 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
006 ES FREQUENCY BAND F [2 BIT] (ES F)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 3000 THROUGH 4000 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
007 ES FREQUENCY BAND G [2 BIT] (ES G)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 4000 THROUGH 6000 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
008 ES FREQUENCY BAND H [2 BIT] (ES H)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 6000 THROUGH 8000 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
009 ES FREQUENCY BAND I [2 BIT] (ES I)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 8000 THROUGH 10,000 MHZ.	J13.2C4 J13.5C2	J13.3C3	J13.4C2
010 ES FREQUENCY BAND J [2 BIT] (ES J)	INDICATES THE STATUS OF ES EQUIPMENT IN THE FREQUENCY RANGE OF 10,000	J13.2C4 J13.5C2	J13.3C3	J13.4C2

DFI NAME
268 ES FREQUENCY BAND STATUS

DUI NAME	EXPLANATION	APPLICABILITY

< OR = 71 NANOSECONDS	14	
NET TIME REFERENCE	15	

DFI NAME DEFINITION
280 TRACK QUALITY AN ESTIMATE OF THE QUALITY OF TRACK INFORMATION ON THE BASIS
OF ITS RELIABILITY.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 TRACK QUALITY [4 BIT]	THE TRACK QUALITY IS STATED AS A NUMERICAL VALUE FROM 1 TO 15 WITH THE HIGHER VALUES INDICATING THE HIGHER TRACK QUALITIES. THE TQ IS BASED ON THE POSITIONAL ACCURACY OF A TRACK REPRESENTED BY AN AREA IN SQUARE DATA MILES WITHIN WHICH IT IS ASSESSED THAT THERE IS A 95% PROBABILITY THAT THE TRACK LIES.	J3.2I J3.3I J3.5I
002 TARGET POSITION QUALITY [2 BIT] (TPQ)	THE TARGET POSITION QUALITY IS STATED AS A NUMERICAL VALUE FROM 1 TO 3 WITH THE HIGHER VALUES INDICATING HIGHER RELIABILITY OF POSITIONAL ACCURACY OF TARGET LOCATION. THE RELIABILITY OF THE POSITIONAL INFORMATION IS EXPRESSED IN TERMS OF THE POSITIONAL ACCURACY ASSOCIATED WITH EACH PQ VALUE. THE POSITIONAL ACCURACY ASSOCIATED WITH EACH PQ VALUE IS DEFINED AS THE AREA (DM SQUARED) WITHIN WHICH THERE IS A .95 PROBABILITY THAT THE TARGET IS ACTUALLY LOCATED AT THE TIME OF THE REPORT.	J12.6I
003 TRACK QUALITY, 1 [4 BIT]	SPECIFIES THE RELIABILITY OF THE KINEMATIC DATA WITH HIGHER VALUES INDICATING HIGHER TRACK QUALITY. THE ALGORITHM USED TO DERIVE BALLISTIC MISSILE TRACK QUALITY IS: B EQUALS THE SUMMATION (FROM 1 TO 3) OF THE POSITIONAL VARIANCES CONTAINED IN THE COVARIANCE MATRIX PLUS THE PRODUCT OF THE VELOCITY VARIANCES IN THE	J3.6I

B-173

EXPLANATION	APPLICABILITY
COVARIANCE MATRIX TIMES A SQUARED FACTOR WHICH VARIES THE DEPENDENCE OF THE COMPUTED BALLISTIC MISSILE TRACK QUALITY ON THE VELOCITY ERRORS OF THE REPORTED TRACK. THE DEFAULT FACTOR IS EQUAL TO 6 SECONDS (0-24, 1). B IS A LOOK-UP TABLE.	

BIT CODE

EXPLANATION

0

A TRACK REPORT IS IDENTIFIED AS A NONREAL-TIME REPORT WITH TQ = 0 IF ANY OF THE FOLLOWING CONDITIONS ARE TRUE: THE TRACK DATA ORIGINATE FROM OTHER THAN A TDS OR JTIDS/MIDS EQUIPPED AIRCRAFT; THE TRACK DATA HAVE BEEN RELAYED FROM ANOTHER SYSTEM BY OTHER THAN A REAL-TIME DATA LINK INTERFACE; THE TRACK DATA HAVE BEEN DERIVED FROM OTHER THAN INTEGRATED SENSORS.

DFI NAME DEFINITION
312 CYCLE

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 END OF TARGET REPORTING CYCLE [1 BIT] (EOTRC)	INDICATES ALL TARGETS HELD BY THE SENDING UNIT HAVE BEEN SENT.	J12.6C2 J12.7I

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 001 -----

NO STATEMENT	0	
THE TARGET IS THE LAST TARGET IN AN UPDATE SEQUENCE TO BE TRANSMITTED	1	INDICATES THAT THE TARGET IS THE LAST TARGET TO BE TRANSMITTED IN THE SENDER'S TARGET REPORTING CYCLE. THE NEXT TARGET TO BE TRANSMITTED WILL BE THE BEGINNING OF THE NEXT CYCLE. THIS INDICATES THAT A COMPLETE SET OF TARGETS HAS BEEN TRANSMITTED. THIS PROVIDES THE RECEIVER WITH AN INDICATION THAT ALL TARGETS HELD BY THE SENDING UNIT HAVE BEEN TRANSMITTED.

DFI NAME DEFINITION
325 INDICATOR

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 HANDOVER INDICATOR [1 BIT] (H/I)	INDICATES THAT A HANDOVER OF CONTROL OF A REFERENCE TRACK IS IN PROGRESS.	J10.5I
002 MERGED MEASUREMENT INDICATOR [1 BIT] (MM IND)	INDICATES A SENSOR CAN DETECT MORE THAN ONE TARGET BUT CANNOT SEPARATE THEM.	J12.7I
003 TEXT INDICATOR [2 BIT] (TXT IND)	INDICATES THE NUMBER OF TEXT CONTINUATION WORDS ASSOCIATED WITH THE POINTER.	J7.3I

DATA ITEM	BIT CODE	EXPLANATION

DFI NAME DEFINITION
342 EMITTER STATUS

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 EMITTER STATUS [3 BIT]	REPORTS THE STATUS OF THE TARGET'S EMITTER.	J12.6C2 J12.7E1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
INACTIVE	1	TARGET'S EMITTER IS INACTIVE OR NOT DETECTED.
TARGET EMITTER ACTIVE	2	TARGET'S EMITTER IS ACTIVE. MODE NOT SPECIFIED.
TARGET EMITTER IN SEARCH	3	TARGET EMITTER IN SEARCH MODE.
TARGET EMITTER IN TRACK	4	TARGET EMITTER IN TRACKING MODE.
MISSILE LAUNCH	5	TARGET HAS LAUNCHED A MISSILE.
UNDEFINED	6 THROUGH 7	

DFI NAME DEFINITION
348 NET NUMBER A REFERENCE NUMBER USED DURING MULTI-NET OPERATIONS TO
UNIQUELY IDENTIFY EACH NET ESTABLISHED BY CODE DIVISION
MULTIPLIER TECHNIQUES.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 NET NUMBER [7 BIT]		J0.6C3		
002 NET NUMBER, NONC2 JU-TO-NONC2 JU NPG A [7 BIT]	INDICATES THE NONC2 JU-TO-NONC2 JU NPG NET NUMBER ON WHICH SOURCE TN IS ASSIGNED TO OPERATE.	J2.2I		
003 NET NUMBER, NONC2 JU-TO-NONC2 JU NPG B [7 BIT]	INDICATES THE SECONDARY NONC2 JU-TO- NONC2 JU NPG NET NUMBER ON WHICH THE SOURCE TN IS ASSIGNED TO OPERATE.	J2.2C5		
004 NET NUMBER, RECEIVE [7 BIT]		J0.4E0		
005 NET NUMBER, TRANSMIT [7 BIT]		J0.4E0		
006 CONTROL CHANNEL [7 BIT]		J2.2C2 J2.5C1 J10.3C1	J2.3C2 J2.6C1 J12.4I	J2.4C2 J9.0C1
007 NET NUMBER, RELAY [7 BIT]	SPECIFIES THE NET NUMBER OF THE RECEIVE ASSIGNMENT IN THOSE TIME SLOTS SPECIFIED BY THE RELAY DELAY, RECEIVE FIELD.	J0.3C1		
008 NET NUMBER, 3 [7 BIT]		J0.6C4		
010 NET NUMBER, DEFAULT [7 BIT]	INDICATES THE NET NUMBER THE TERMINAL IS TO MONITOR WHEN NOT IMPLEMENTING A SPECIFIC RECEIVE, TRANSMIT, OR RELAY ASSIGNMENT.	J1.5I		

DFI NAME
348 NET NUMBER

DUI NAME	EXPLANATION	APPLICABILITY
011 NET NUMBER, NET STATUS PARTICIPATION GROUP [7 BIT]		J1.5E0
012 NET NUMBER, ORIGINAL NET [7 BIT]	THE NET NUMBER USED BY THE ORIGINAL TRANSMITTER FOR THE PARTITIONED VARIABLE MODE. THIS PERMITS AN INTERMEDIATE RELAY IN A MULTIHOP RELAY PATH TO DECRYPT THE RECEIVED MESSAGE.	J0.4C1
013 NET NUMBER, 1 [7 BIT]		J0.6C4
014 NET NUMBER, 2 [7 BIT]		J0.6C4
015 NET NUMBER, 4 [7 BIT]		J0.6C4
016 NET NUMBER, 5 [7 BIT]		J0.6C4
017 NET NUMBER, 6 [7 BIT]		J0.6C4
018 ZOOM RELAY TRANSMIT NET [7 BIT]		J0.4I
019 TIME SLOT OFFSET, CONTROL NET ENTRY [7 BIT]	INDICATES THE NUMBER OF TIME SLOTS BETWEEN THE NET STATUS PG TIME SLOTS AND THE CONTROL NET ENTRY TIME SLOT OF THE TERMINAL. THE CONTROL NET ENTRY TIME SLOT IS DE- FINED AS A POSITIVE OFFSET FROM THE SLOT IN WHICH THE MESSAGE WAS RECEIVED.	J1.4I J1.5E0
020 NET NUMBER, CONTROL NET ENTRY [7 BIT]	INDICATES THE NET NUMBER OF THE TER- MINALS CONTROL NET ENTRY RECEIVE SLOT.	J1.4I J1.5E0

DFI NAME
348 NET NUMBER

DUI NAME	EXPLANATION	APPLICABILITY
021 NET NUMBER, SPECIFIED [7 BIT]	INDICATES THE NET NUMBER OF THE TIME SLOT EXPLICITLY SPECIFIED.	J0.3E0
022 NET NUMBER, DECRYPTION [7 BIT]	SPECIFIES THE NET NUMBER TO BE USED FOR MESSAGE DECRYPTION WHEN THE TIME SLOT ASSIGNMENT TYPE FIELD IS SET TO RECEIVE, THE CRYPTOMODE INDICATOR FIELD IS SET TO PARTITIONED VARIABLE MODE, AND THE TIME SLOT ASSIGNMENT QUALIFIER FIELD IS SET TO ZERO.	J0.3C1
023 NET NUMBER, 7 [7 BIT]		J0.6C4

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001, 007, 012, 018, AND 020-022 -----

SQUARE/RECTANGULAR	1	IF AREA MAJOR AND AREA MINOR AXES ARE EQUAL THE AREA DESCRIBED IS A SQUARE. IF THE AXES ARE NOT EQUAL THE AREA DESCRIBED IS A RECTANGLE.
CIRCULAR/ELLIPTICAL	2	IF AREA MAJOR AND AREA MINOR AXES ARE EQUAL THE AREA DESCRIBED IS A CIRCLE. IF THE AXES ARE NOT EQUAL THE AREA IS AN ELLIPSE.
UNDEFINED	3	

APPENDIX B

DFI NAME
351 ALTERNATE FIELD INDICATOR

DATA ITEM (CONTINUED)
----- FOR DUI 015 -----

BIT CODE

EXPLANATION

QUALIFIER 0

0

INDICATES WHEN THE TIME SLOT
ASSIGNMENT TYPE FIELD IS SET TO
TRANSMIT THAT THE OFFSET TIME SLOT
SPECIFIED BY RELAY DELAY, RECEIVE
FIELD IS FOR RECEPTION OF AN
ORIGINAL MESSAGE. INDICATES WHEN
THE TIME SLOT ASSIGNMENT TYPE
FIELD IS SET TO RECEIVE AND THE
CRYPTOMODE INDICATOR FIELD IS SET
TO THE PARTITIONED VARIABLE MODE
THAT THE RECEIVE ASSIGNMENT IN THE
EXPLICIT TIME SLOT IS FOR
RECEPTION OF A RELAYED MESSAGE AND
THE OFFSET TIME SLOT SPECIFIED BY
THE RELAY DELAY, RECEIVE FIELD IS
TO BE USED ONLY FOR DATA
DECRYPTION. INDICATES WHEN TIME
SLOT ASSIGNMENT TYPE FIELD IS SET
TO RECEIVE AND THE CRYPTOMODE
INDICATOR FIELD IS SET TO THE
COMMON VARIABLE MODE THAT THE
RECEIVE ASSIGNMENT IN THE EXPLICIT
TIME SLOT AND IN THE OFFSET TIME
SLOT ARE FOR RECEPTION OF ORIGINAL
MESSAGES.

QUALIFIER 1

1

INDICATES WHEN THE CRYPTOMODE
INDICATOR FIELD IS SET TO THE
PARTITIONED VARIABLE MODE THAT THE
EXPLICIT TIME SLOT IS FOR
TRANSMISSION OR RECEPTION OF
ORIGINAL MESSAGES AND THE OFFSET
TIME SLOT SPECIFIED BY THE RELAY
DELAY, RECEIVE FIELD IS FOR
RECEPTION OF RELAYED MESSAGES.
WHEN THE CRYPTOMODE INDICATOR
FIELD IS SET TO THE COMMON
VARIABLE MODE THE OFFSET TIME SLOT
SPECIFIED BY RELAY DELAY, RECEIVE
FIELD IS FOR RECEPTION OF A RELAY

DFI NAME DEFINITION
352 TRACK NUMBER, IJMS A REFERENCE NUMBER USED IN THE INTERIM JTIDS/MIDS MESSAGE SPECIFICATION.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 IJMS, SYSTEM REFERENCE NUMBER [15 BIT]	A STANDARD SYSTEM REFERENCE NUMBER (SRN) CONSISTING OF FIVE OCTAL DIGITS USED TO IDENTIFY ALL SYSTEM ENTITIES ON IJMS.	J7.4E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
ILLEGAL NUMERIC	00000 (OCTAL) 00001 THROUGH 00076 (OCTAL)	ASSIGNED AS IDENTIFICATION NUMBERS FOR PUS.
ILLEGAL NUMERIC	00077 (OCTAL) 00100 THROUGH 00176 (OCTAL)	ASSIGNED AS IDENTIFICATION NUMBERS FOR RUS.
NUMERIC NUMERIC	00177 (OCTAL) 00200 THROUGH 07776 (OCTAL)	COLLECTIVE ADDRESS. ASSIGNED AS IDENTIFICATION NUMBERS FOR JTIDS/MIDS EQUIPPED UNITS. SRNS NOT ASSIGNED TO JTIDS/MIDS EQUIPPED UNITS ARE ALLOCATED IN BLOCKS TO BE USED FOR TACTICAL INFORMATION REPORTING.
NUMERIC NUMERIC	07777 (OCTAL) 10000 THROUGH 77776 (OCTAL)	RESERVED FOR SPECIAL PURPOSE. ASSIGNED AS IDENTIFICATION NUMBERS FOR JTIDS/MIDS EQUIPPED UNITS. SRNS NOT ASSIGNED TO JTIDS/MIDS EQUIPPED UNITS ARE ALLOCATED IN BLOCKS TO BE USED FOR TACTICAL INFORMATION REPORTING.
ILLEGAL	77777 (OCTAL)	

B-218

MIL-STD-6016B
APPENDIX B

APPENDIX B

DFI NAME DEFINITION
353 UNCERTAINTY INDEX PROVIDES UNCERTAINTY VALUES FOR POSITIONS AND VELOCITY.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 SLANT RANGE POSITION UNCERTAINTY [4 BIT]	PROVIDES AN ESTIMATE OF TARGET POSITION UNCERTAINTY ALONG THE MEASUREMENT AXIS DEFINED ALONG THE LINE BETWEEN THE OBSERVER POSITION AND THE TARGET POSITION. THE UNCERTAINTY SHALL BE CALCULATED AS THE ROOT-SUM-SQUARE OF THE MEAN OF TARGET MEASUREMENT ERROR, THE STANDARD DEVIATION OF THE TARGET MEASUREMENT ERROR, THE MEAN OF THE OBSERVER POSITION ERROR, AND THE STANDARD DEVIATION OF THE OBSERVER POSITION ERROR ALONG THE AXIS. THE MEAN SHALL REFLECT ALL KNOWN BIASES SUCH AS SENSOR BORESIGHTING ERRORS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION DESCRIBES A 2 SIGMA REGION AROUND THE MEAN (-SIGMA TO SIGMA).	J12.6C3
002 CROSS RANGE POSITION UNCERTAINTY [4 BIT]	PROVIDES AN ESTIMATE OF TARGET POSITION UNCERTAINTY ALONG THE MEASUREMENT AXIS DEFINED ALONG A HORIZONTAL AXIS PERPENDICULAR TO THE SLANT RANGE POSITION UNCERTAINTY AXIS. THE SLANT RANGE POSITION UNCERTAINTY AXIS AND THE CROSS RANGE POSITION UNCERTAINTY AXIS FORM A PLANE WITH A TILT FROM LOCAL LEVEL DESCRIBED BY THE UNCERTAINTY TILT FIELD. LOCAL LEVEL IS DEFINED AT THE LATITUDE AND LONGITUDE IN THE J12.6I WORD AND THE ALTITUDE IN THE J12.6E0 WORD. THE UNCERTAINTY SHALL BE CALCULATED AS THE ROOT-SUM-SQUARE OF THE MEAN TARGET MEASUREMENT	J12.6C3

APPENDIX B

DFI NAME
353 UNCERTAINTY INDEX

DUI NAME	EXPLANATION	APPLICABILITY
002 (CONTINUED)	ERROR, THE STANDARD DEVIATION OF THE TARGET MEASUREMENT ERROR, THE MEAN OF THE OBSERVER POSITION ERROR, AND THE STANDARD DEVIATION OF THE OBSERVER POSITION ERROR ALONG THE AXIS. THE MEAN SHALL REFLECT ALL KNOWN BIASES SUCH AS SENSOR BORESIGHTING ERRORS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION DESCRIBES A 2 SIGMA REGION AROUND THE MEAN (-SIGMA TO SIGMA). THE MEASUREMENT AXES ALONG WHICH THE SLANT RANGE POSITION UNCERTAINTY AND VERTICAL POSITION UNCERTAINTY ARE DEFINED ARE MUTUALLY ORTHOGONAL.	
003 VERTICAL POSITION UNCERTAINTY [4 BIT]	PROVIDES AN ESTIMATE OF TARGET POSITION UNCERTAINTY ALONG THE MEASUREMENT AXIS DEFINED ALONG A VERTICAL AXIS PERPENDICULAR TO THE SLANT RANGE POSITION UNCERTAINTY AXIS. THE VERTICAL POSITION UNCERTAINTY AXIS AND THE SLANT RANGE POSITION UNCERTAINTY AXIS FORM A PLANE WITH AN ORIENTATION FROM TRUE NORTH DESCRIBED BY THE UNCERTAINTY ORIENTATION FIELD. THE UNCERTAINTY SHALL BE CALCULATED AS THE ROOT-SUM-SQUARE OF THE MEAN TARGET MEASUREMENT ERROR, THE STANDARD DEVIATION OF THE TARGET MEASUREMENT ERROR, THE MEAN OF THE OBSERVER POSITION ERROR, AND THE STANDARD DEVIATION OF THE OBSERVER POSITION ERROR ALONG THIS AXIS. THE MEAN SHALL REFLECT ALL KNOWN BIASES SUCH AS SENSOR BORESIGHTING	J12.6C3

APPENDIX B

DFI NAME
353 UNCERTAINTY INDEX

DUI NAME
003 (CONTINUED)

EXPLANATION

APPLICABILITY

ERRORS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION DESCRIBES A 2 SIGMA REGION AROUND THE MEAN (-SIGMA TO SIGMA). THE MEASUREMENT AXES ALONG WHICH THE SLANT RANGE POSITION UNCERTAINTY AND VERTICAL POSITION UNCERTAINTY ARE DEFINED ARE MUTUALLY ORTHOGONAL.

004 UNCERTAINTY ORIENTATION
[11 BIT]

THE ANGLE IN THE LOCAL LEVEL PLANE BETWEEN TRUE NORTH AND THE PROJECTION OF THE SLANT RANGE UNCERTAINTY AXIS ONTO THIS PLANE. LOCAL LEVEL IS DEFINED AT THE LATITUDE AND LONGITUDE IN THE J12.6I WORD AND THE ALTITUDE IN THE J12.6E0 WORD. A POSITIVE ANGLE IS MEASURED CLOCKWISE FROM TRUE NORTH.

J12.6C3

005 UNCERTAINTY TILT
[11 BIT]

THE ANGLE BETWEEN THE PROJECTION OF THE SLANT RANGE POSITION UNCERTAINTY AXIS ONTO THE LOCAL LEVEL PLANE AND THE SLANT RANGE POSITION UNCERTAINTY AXIS. LOCAL LEVEL IS DEFINED AT THE LATITUDE AND LONGITUDE IN THE J12.6I WORD AND THE ALTITUDE IN THE J12.6E0 WORD. A POSITIVE ANGLE IS MEASURED COUNTER-CLOCKWISE FROM LOCAL LEVEL.

J12.6C3

007 VELOCITY NORTH UNCERTAINTY
[4 BIT]

PROVIDES THE ESTIMATED VELOCITY NORTH UNCERTAINTY VALUE. THE UNCERTAINTY SHALL BE CALCULATED AS THE ROOT-SUM-SQUARE OF THE MEAN AND STANDARD DEVIATION OF THE NORTH VELOCITY ERROR ESTIMATE. THE MEAN SHALL REFLECT

J12.6C3

APPENDIX B

DFI NAME
353 UNCERTAINTY INDEX

DUI NAME	EXPLANATION	APPLICABILITY
007 (CONTINUED)	ALL KNOWN BIASES SUCH AS SENSOR BORESIGHTING ERRORS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION (SIGMA) DESCRIBES A 2 SIGMA REGION (-SIGMA TO SIGMA) AROUND THE MEAN.	
008 VELOCITY EAST UNCERTAINTY [4 BIT]	PROVIDE THE ESTIMATED VELOCITY EAST UNCERTAINTY VALUE. THE UNCERTAINTY SHALL BE CALCULATED AS THE ROOT-SUM-SQUARE OF THE MEAN AND STANDARD DEVIATION OF THE EAST VELOCITY ERROR ESTIMATE. THE MEAN SHALL REFLECT ALL KNOWN BIASES SUCH AS SENSOR BORESIGHTING ERRORS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION (SIGMA) DESCRIBES A 2 SIGMA REGION (-SIGMA TO SIGMA) AROUND THE MEAN.	J12.6C3
009 VELOCITY DOWN UNCERTAINTY [4 BIT]	PROVIDES THE ESTIMATED VELOCITY DOWN UNCERTAINTY VALUE. THE UNCERTAINTY SHALL BE CALCULATED AS THE ROOT-SUM-SQUARE OF THE MEAN AND STANDARD DEVIATION OF THE DOWN VELOCITY ERROR ESTIMATE. THE MEAN SHALL REFLECT ALL KNOWN BIASES SUCH AS SENSOR BORESIGHTING ERRORS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION (SIGMA) DESCRIBES A 2 SIGMA REGION (-SIGMA TO SIGMA) AROUND THE MEAN.	J12.6C3
010 BEARING UNCERTAINTY [5 BIT]	PROVIDES THE UNCERTAINTY OF BEARING DATA. THE TARGET BEARING PROVIDED IN THE J12.7E0 WORD	J12.7E0

APPENDIX B

DFI NAME
353 UNCERTAINTY INDEX

DUI NAME
010 (CONTINUED)

EXPLANATION

APPLICABILITY

SHALL BE CALCULATED AS
ROOT-SUM-SQUARE OF THE MEAN AND
STANDARD DEVIATION OF THE BEARING
ERROR ESTIMATE. THE MEAN SHALL
REFLECT ALL KNOWN BIASES SUCH AS
SENSOR BORESIGHTING ERRORS. THE
STANDARD DEVIATION SHALL REFLECT
ERRORS DUE TO MEASUREMENT NOISE.
THE STANDARD DEVIATION (SIGMA)
DESCRIBES A 2 SIGMA REGION (-SIGMA
TO SIGMA) AROUND THE MEAN.

011 ELEVATION UNCERTAINTY
[5 BIT]

PROVIDES UNCERTAINTY OF ELEVATION
OF THE TARGET ELEVATION ANGLE
PROVIDED IN THE J12.7E0 WORD. THE
UNCERTAINTY SHALL BE CALCULATED
AS ROOT-SUM-SQUARE OF THE MEAN
AND STANDARD DEVIATION OF THE
ELEVATION ERROR ESTIMATE. THE
MEAN SHALL REFLECT ALL KNOWN
BIASES SUCH AS SENSOR BORESIGHTING
ERRORS. THE STANDARD DEVIATION
SHALL REFLECT ERRORS DUE TO
MEASUREMENT NOISE. THE STANDARD
DEVIATION (SIGMA) DESCRIBES A 2
SIGMA REGION (- SIGMA TO SIGMA)
AROUND THE MEAN.

J12.7E0

012 BEARING ANGLE RATE UNCERTAINTY
[5 BIT]

PROVIDES AN ESTIMATE OF TARGET
BEARING ANGLE RATE UNCERTAINTY.
THE UNCERTAINTY SHALL BE
CALCULATED AS THE ROOT-SUM-SQUARE
OF THE MEAN OF TARGET MEASUREMENT
ERROR, THE STANDARD DEVIATION OF
THE TARGET MEASUREMENT ERROR, THE
MEAN OF THE ERROR OF THE OWNERSHIP
VELOCITY CONTRIBUTION TO BEARING
ANGLE RATE, AND THE STANDARD
DEVIATION OF THE ERROR OF THE
OWNERSHIP CONTRIBUTION TO BEARING
ANGLE RATE. THE MEAN SHALL

J12.7E1

APPENDIX B

353 UNCERTAINTY INDEX

DUI NAME	EXPLANATION	APPLICABILITY
014 (CONTINUED)	MEAN OF THE OBSERVER POSITION ERROR, AND THE STANDARD DEVIATION OF THE OBSERVER POSITION ERROR ALONG THIS AXIS. THE MEAN SHALL REFLECT ALL KNOWN BIASES SUCH AS SENSOR BORESIGHTING ERRORS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION DESCRIBES A 2 SIGMA REGION AROUND THE MEAN (-SIGMA TO SIGMA). THE MEASUREMENT AXES ALONG WHICH SLANT RANGE POSITION UNCERTAINTY, CROSS RANGE POSITION UNCERTAINTY AND VERTICAL POSITION UNCERTAINTY ARE DEFINED ARE MUTUALLY ORTHOGONAL.	
015 RANGE RATE UNCERTAINTY [5 BIT]	PROVIDES AN ESTIMATE OF THE TARGET RANGE RATE UNCERTAINTY ALONG THE MEASUREMENT AXIS. THE UNCERTAINTY SHALL BE CALCULATED AS THE ROOT-SUM-SQUARE OF THE MEAN OF TARGET MEASUREMENT ERROR, THE MEAN OF THE OBSERVER'S OWN VELOCITY COMPONENT ERROR, AND THE STANDARD DEVIATION OF THE OBSERVER'S OWN VELOCITY COMPONENT ERROR ALONG THIS AXIS. THE STANDARD DEVIATION SHALL REFLECT ERRORS DUE TO MEASUREMENT NOISE. THE STANDARD DEVIATION DESCRIBES A 2 SIGMA REGION AROUND THE MEAN (-SIGMA TO SIGMA).	J12.7C1

A POINT OCCUPIED BY A SURFACE UNIT
CAPABLE OF PERFORMING AIR CONTROL
FUNCTIONS WHOSE PURPOSE IS TO
SCREEN RETURNING AIRCRAFT TO
PREVENT ENEMY AIRCRAFT FROM
LOCATING THE FORCE.

TOMCAT

1

A POINT OUTSIDE A FORMATION OR
GEOGRAPHIC AREA WHERE AN AIRCRAFT
OR SHIP IS STATIONED AS A RESCUE
OR WARNING UNIT.

PICKET

2

A POINT FOR A PREARRANGED MEETING AT
A GIVEN TIME AND LOCATION
FROM WHICH TO BEGIN AN ACTION OR
PHASE OF AN OPERATION OR TO WHICH
TO RETURN, AFTER AN OPERATION.

RENDEZVOUS

3

UNDEFINED
REPLENISHMENT

4
5

A POINT WHERE REARMING AND RESUPPLY
OF UNITS OTHER THAN AIRCRAFT MAY
BE CONDUCTED.

RESCUE

6

A POINT USED TO MARK THE POSITION OF
A RESCUE OPERATION.

UNDEFINED

7 THROUGH 15

FOR STATION (AIR) (3)

NO STATEMENT

0

A GENERAL POINT DESCRIBING AN AIR
STATION THAT MUST BE AMPLIFIED BY
VOICE OR PREDETERMINED PROCEDURES.
A POINT AT WHICH CAP AIRCRAFT ARE OR
WILL BE ORBITING OR MANEUVERING.

THE FOREMOST LIMITS OF A SERIES OF
AREAS IN WHICH GROUND COMBAT UNITS
ARE DEPLOYED, EXCLUDING THE AREAS
IN WHICH THE COVERING OR SCREENING
FORCES ARE OPERATING.

A STRAIGHT LINE FROM THE GUN(S) TO
THE TARGET. ALTITUDE, IF
INCLUDED, IS THE APEX OF THE
PROJECTILE.

A LINE DESCRIBING THE CENTER OF A
ROUTE DESIGNATED FOR TRAVEL BY
FRIENDLY AIRCRAFT.

A LINE THAT INDICATES A LIMIT BEYOND
WHICH EXISTS A HOSTILE
ENVIRONMENT.

A LINE BEYOND WHICH FRIENDLY
AIRCRAFT USUALLY DO NOT FLY IN
PEACETIME.

A LINE DESCRIBING THE CENTER LINE OF
A ROUTE THROUGH THE FORWARD
MISSILE ENGAGEMENT ZONE (MEZ) THAT
MUST BE FLOWN BY FRIENDLY AIRCRAFT
TO ENSURE THEY ARE NOT DESIGNATED
HOSTILE BY DEFENSE SYSTEMS.

A LINE POSITIONED IN HOSTILE
AIRSPACE WHICH MAY BE USED IN
CONJUNCTION WITH OTHER CRITERIA
FOR HOSTILE DETERMINATION.

A LINE ESTABLISHED BY THE
APPROPRIATE GROUND COMMANDER TO
ENSURE COORDINATION OF FIRE NOT
UNDER HIS COMMAND BUT WHICH MAY
AFFECT CURRENT TACTICAL
OPERATIONS. ATTACKS AGAINST
GROUND TARGETS BEHIND THIS LINE
MUST BE COORDINATED WITH THE
APPROPRIATE GROUND COMMANDER.

EXPLANATION

A LINE DEFINING THE FORWARD POSITION
OF OWN TROOPS WITHIN A GROUND AREA
OF RESPONSIBILITY, THAT DOES NOT
USUALLY COINCIDE WITH THE FEBA.

A GENERAL NONHAZARD AREA THAT MUST
BE AMPLIFIED BY VOICE OR
PREDETERMINED PROCEDURES.

AN AREA WHERE A SEARCH IS BEING OR
WILL BE CONDUCTED. NORMALLY
ASSOCIATED WITH A SAR MISSION.

A SPECIFIED AREA DESIGNATED BY THE
AREA AIRSPACE MANAGEMENT AUTHORITY
WHERE FLIGHT IS RESTRICTED WITHOUT
PRIOR APPROVAL.

AN AREA FOR MILITARY MANEUVER OR
SIMULATED WARTIME OPERATION
INVOLVING PLANNING, PREPARATION
AND EXECUTION.

A RESTRICTED AREA ESTABLISHED TO
ALLOW SUBMARINE OPERATIONS TO BE
UNIMPEDED BY THE OPERATION, OR
POSSIBLE ATTACK FROM FRIENDLY
FORCES IN WARTIME, OR TO BE
CONDUCTED WITHOUT SUBMERGED MUTUAL
INTERFERENCE IN PEACETIME.

AIRSPACE OF DEFINED DIMENSIONS
WITHIN WHICH THE RESPONSIBILITY
FOR ENGAGEMENT NORMALLY RESTS WITH
FIGHTER AIRCRAFT.

AREA OF GROUND WITHIN WHICH THE
RESPONSIBILITY FOR ENGAGEMENT

INPUTS.
A SMALL AREA ESTABLISHED BY THE
SUBMARINE WITHIN THE SPA TO ALLOW
FRIENDLY FORCES TO PROSECUTE A
SUBMARINE CONTACT WITHIN THE
REMAINDER OF THE SPA WHILE
CONTINUING TO PROVIDE PROTECTION
TO THE SUBMARINE.

MOVING HAVEN

7

RESTRICTED AREAS ESTABLISHED TO
PROVIDE A MEASURE OF SECURITY TO
SUBMARINES AND SURFACE SHIPS IN
TRANSIT THROUGH AREAS IN WHICH THE
EXISTING ATTACK RESTRICTIONS WOULD
BE INADEQUATE TO PREVENT ATTACK BY
FRIENDLY FORCES.

DISUSED
SONOBUOY POSITION

8
9

THE GEOGRAPHIC POSITION OF AN ACTUAL
SONOBUOY, A SONAR DEVICE USED TO
DETECT SUBMARINES WHICH, WHEN
ACTIVATED, RELAYS INFORMATION BY
RADIO.

SONOBUOY PATTERN
REFERENCE POSITION

10

A GEOGRAPHIC POSITION RELATIVE TO
WHICH A PATTERN OF SONOBUOYS ARE
POSITIONED. MAY BE THE POSITION
OF AN ACTUAL SONOBUOY, OR JUST A
GEOGRAPHIC POSITION IN THE WATER
OR ON LAND.

LIMITING LINE
OF APPROACH

11

MATHEMATICALLY CALCULATED LIMIT,
RELATIVE TO THE FORCE, WITHIN
WHICH AN ATTACKING SUBMARINE MUST
BE IN ORDER THAT IT CAN REACH THE
TORPEDO DANGER ZONE (TDZ). THE
TDZ IS AN AREA WHICH THE SUBMARINE
MUST ENTER IN ORDER TO BE WITHIN
MAXIMUM EFFECTIVE TORPEDO FIRING
RANGE.

CEASE ENGAGE

BIT CODE
4

EXPLANATION
BREAK THE ENGAGEMENT ON THE TARGET SPECIFIED IN OBJECTIVE TN WITH THE WEAPON SYSTEM SPECIFIED IN WEAPON TYPE AND WHOSE TRACK NUMBER IS INCLUDED IN FRIENDLY WEAPON TN. IF WEAPON TYPE IS MISSILE/CONVENTIONAL, DO NOT FIRE AT TARGET SPECIFIED IN OBJECTIVE TN. IF FIRING HAS OCCURRED, PERMIT MISSILES IN FLIGHT TO CONTINUE TO INTERCEPT. IF WEAPON TYPE IS ANY/ALL, AND FRIENDLY WEAPON TN=0, ALL WEAPONS EMPLOYED AGAINST OBJECTIVE TN ARE INDICATED.

HOLD FIRE

5

EMERGENCY ORDER. IF WEAPON TYPE IS MISSILE/CONVENTIONAL, DO NOT FIRE AT TARGET SPECIFIED IN OBJECTIVE TN. IF FIRING HAS OCCURRED, DESTROY THE MISSILES IN FLIGHT. IF WEAPON TYPE IS AIRCRAFT, DISCONTINUE THE INTERCEPT. IF WEAPON TYPE IS ANY/ALL, TAKE ACTION SPECIFIED FOR WEAPON BEING EMPLOYED.

CEASE FIRE

6

IF WEAPON TYPE IS MISSILE/CONVENTIONAL, DO NOT FIRE AT TARGET SPECIFIED IN OBJECTIVE TN. IF FIRING HAS OCCURRED, PERMIT MISSILES IN FLIGHT TO CONTINUE TO INTERCEPT. IF WEAPON TYPE IS AIRCRAFT, DISCONTINUE THE INTERCEPT. IF WEAPON TYPE IS ANY/ALL TAKE ACTION SPECIFIED FOR THE WEAPON BEING EMPLOYED.

COVER

7

ADDRESSEE TN COVER OBJECTIVE TN. OBJECTIVE TN IS ENGAGED BY ANOTHER WEAPON SYSTEM OR HAS NOT YET BECOME A "SIGNIFICANT" THREAT. ADDRESSEE TN ASSUME POSTURE THAT WILL ALLOW ENGAGEMENT OF OBJECTIVE TN IF DIRECTED.

APPENDIX B

DFI	NAME	DEFINITION
419	AXIS	

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME

EXPLANATION

APPLICABILITY

001 AREA MAJOR AXIS, 4
[7 BIT]

THIS FIELD IS USED IN CONJUNCTION WITH THE SQUARE/CIRCLE SWITCH, AREA MINOR AXIS, 4, AXIS ORIENTATION, LATITUDE, AND LONGITUDE TO DESCRIBE THE AREA OF A CIRCLE, ELLIPSE, SQUARE, OR RECTANGLE; OR THIS FIELD IS USED BY ITSELF TO DESCRIBE THE WIDTH OF A CORRIDOR OR A LOW LEVEL TRANSIT ROUTE CENTERED ON THE LINE. FOR OTHER THAN A CORRIDOR OR LOW LEVEL TRANSIT ROUTE, THE LENGTH EXPRESSED IN THIS FIELD IS DOUBLED AND CENTERED ON THE POSITION DESCRIBED BY THE LATITUDE AND LONGITUDE. THE INCREMENTS FOR THIS FIELD ARE EXPONENTIAL AND COMPUTED BY USING THE FOLLOWING FORMULA: LENGTH IN DATA MILES EQUALS 1.11 TO THE $(\text{BIT CODE} - 64)$ POWER. EXAMPLE: FOR DI VALUE 5, LENGTH = 1.11 TO THE $(5-64)$ POWER.

J3.0C5

002 AREA MINOR AXIS, 4
[7 BIT]

THIS FIELD IS USED IN CONJUNCTION WITH THE SQUARE/CIRCLE SWITCH, AREA MAJOR AXIS, 4, AXIS ORIENTATION, LATITUDE, AND LONGITUDE TO DESCRIBE THE AREA OF A CIRCLE, ELLIPSE, SQUARE, OR RECTANGLE. THE AREA MINOR AXIS IS ALWAYS ORIENTED AT 90 DEGREES TO THE MAJOR AXIS. THE LENGTH EXPRESSED IN THIS FIELD IS DOUBLED AND CENTERED ON THE POSITION DESCRIBED BY THE LATITUDE AND LONGITUDE. THE INCREMENTS FOR THIS FIELD ARE EXPONENTIAL AND COMPUTED BY USING THE FOLLOWING

J3.0C5

APPENDIX B

DFI NAME
419 AXIS

DUI NAME
002 (CONTINUED)

EXPLANATION

APPLICABILITY

FORMULA: LENGTH IN DATA MILES
EQUALS 1.11 TO THE (BIT CODE - 64)
POWER. EXAMPLE: FOR DI VALUE 5,
LENGTH = 1.11 TO THE (5-64) POWER.

003 AREA MAJOR AXIS
[6 BIT]

THIS FIELD IS USED IN CONJUNCTION
WITH THE SQUARE/CIRCLE SWITCH,
AREA MINOR AXIS, AXIS ORIENTATION,
LATITUDE AND LONGITUDE TO DESCRIBE
THE AREA OF A CIRCLE, ELLIPSE,
SQUARE OR RECTANGLE. THE LENGTH
EXPRESSED IN THIS FIELD IS DOUBLED
AND CENTERED ON THE POSITION DE-
SCRIBED BY THE LATITUDE AND
LONGITUDE.

J3.0C2 J3.7C2 J14.0C2
J14.2C2

004 AREA MINOR AXIS
[6 BIT]

THIS FIELD IS USED IN CONJUNCTION
WITH THE SQUARE/CIRCLE SWITCH,
AREA MAJOR AXIS, AXIS ORIENTATION,
LATITUDE AND LONGITUDE TO DESCRIBE
THE AREA OF A CIRCLE, ELLIPSE,
SQUARE OR RECTANGLE. THE AREA
MINOR AXIS IS ALWAYS ORIENTED AT
90 DEGREES TO THE AREA MAJOR AXIS.
THE LENGTH EXPRESSED IN THIS FIELD
IS DOUBLED AND CENTERED ON THE
POSITION DESCRIBED BY THE LATITUDE
AND LONGITUDE.

J3.0C2 J3.7C2 J14.0C2
J14.2C2

005 AREA MAJOR AXIS, 1
[6 BIT]

THIS FIELD IS USED IN CONJUNCTION
WITH THE SQUARE/CIRCLE SWITCH, 1;
AREA MINOR AXIS, 1; AXIS
ORIENTATION, 1; LATITUDE; AND
LONGITUDE TO DESCRIBE THE AREA OF
A CIRCLE, ELLIPSE, SQUARE, OR
RECTANGLE. THE LENGTH EXPRESSED
IN THIS FIELD IS DOUBLED AND
CENTERED ON THE POSITION DESCRIBED
BY THE LATITUDE AND LONGITUDE.

J7.6C1

APPENDIX B

DFI NAME
419 AXIS

DUI NAME
006 AREA MAJOR AXIS, 2
[6 BIT]

EXPLANATION
THIS FIELD IS USED IN CONJUNCTION
WITH THE SQUARE/CIRCLE SWITCH, 2;
AREA MINOR AXIS, 2; AXIS
ORIENTATION, 2; LATITUDE; AND
LONGITUDE TO DESCRIBE THE AREA OF
A CIRCLE, ELLIPSE, SQUARE, OR
RECTANGLE. THE LENGTH EXPRESSED
IN THIS FIELD IS DOUBLED AND
CENTERED ON THE POSITION DESCRIBED
BY THE LATITUDE AND LONGITUDE.

APPLICABILITY
J7.6C1

007 AREA MINOR AXIS, 1
[6 BIT]

THIS FIELD IS USED IN CONJUNCTION
WITH THE SQUARE/CIRCLE SWITCH, 1;
AREA MAJOR AXIS, 1; AXIS
ORIENTATION, 1; LATITUDE; AND
LONGITUDE TO DESCRIBE THE AREA OF
A CIRCLE, ELLIPSE, SQUARE, OR
RECTANGLE. THE AREA MINOR AXIS, 1
IS ALWAYS ORIENTED AT 90 DEGREES
TO THE AREA MAJOR AXIS, 1. THE
LENGTH EXPRESSED IN THIS FIELD IS
DOUBLED AND CENTERED ON THE
POSITION DESCRIBED BY THE LATITUDE
AND LONGITUDE.

J7.6C1

008 AREA MINOR AXIS, 2
[6 BIT]

THIS FIELD IS USED IN CONJUNCTION
WITH THE SQUARE/CIRCLE SWITCH, 2;
AREA MAJOR AXIS, 2; AXIS
ORIENTATION, 2; LATITUDE; AND
LONGITUDE TO DESCRIBE THE AREA OF
A CIRCLE, ELLIPSE, SQUARE, OR
RECTANGLE. THE AREA MINOR AXIS, 2
IS ALWAYS ORIENTED AT 90 DEGREES
TO THE AREA MAJOR AXIS, 2. THE
LENGTH EXPRESSED IN THIS FIELD IS
DOUBLED AND CENTERED ON THE
POSITION DESCRIBED BY THE LATITUDE
AND LONGITUDE.

J7.6C1

009 AREA MINOR AXIS, 3
[8 BIT]

THIS FIELD IS USED IN CONJUNCTION
WITH THE AREA MAJOR AXIS, 3, AXIS

J3.5C3

APPENDIX B

DFI NAME
419 AXIS

DUI NAME
009 (CONTINUED)

EXPLANATION
ORIENTATION, LATITUDE, AND
LONGITUDE TO DESCRIBE THE AREA OF
A SQUARE OR RECTANGLE. THE AREA
MINOR AXIS, 3 IS ALWAYS ORIENTED
AT 90 DEGREES TO THE AREA MAJOR
AXIS, 3. THE LENGTH EXPRESSED IN
THIS FIELD IS DOUBLED AND
CENTERED ON THE POSITION
DESCRIBED BY THE LATITUDE AND
LONGITUDE.

010 AREA MAJOR AXIS, 3
[8 BIT]

THIS FIELD IS USED IN CONJUNCTION
WITH THE AREA MINOR AXIS, 3, AXIS
ORIENTATION, LATITUDE AND
LONGITUDE TO DESCRIBE THE AREA OF
A SQUARE OR RECTANGLE. THE
LENGTH EXPRESSED IN THIS FIELD IS
DOUBLED AND CENTERED ON THE
POSITION DESCRIBED BY THE LATITUDE
AND LONGITUDE.

430	EMITTER OPERATION MODE NUMBER	A NUMERIC INDEX ASSIGNED TO EACH MODE OF A GIVEN EMITTER.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
001 MODE NUMBER [6 BIT]	A TWO DIGIT NUMERIC INDEX SEQUENTIALY ASSIGNED TO EACH MODE OF A GIVEN EMITTER. A MODE IS A GROUP OF RF PARAMETERS WHICH CHARACTERIZE SEVERAL POSSIBLE OPERATING CONDITIONS OF A GIVEN EMITTER. MODE NUMBERS AMPLIFY THE EMITTER NUMBER FIELD. NOT ALL EMITTERS HAVE MODE NUMBERS.	J3.7C4 J14.0C3 J14.2C3
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
NUMERIC	1 THROUGH 63	

DFI NAME DEFINITION
431 CONFIDENCE PROVIDES THE DEGREE OF CONFIDENCE OF THE REPORTED EMITTER
EVALUATION ON A SCALE FROM 0 TO 7, WITH THE HIGHEST CONFIDENCE
BEING SEVEN.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
003 EMITTER CONFIDENCE [3 BIT]	THE CONFIDENCE IS COMPUTED ON THE BASIS OF THE NUMBER OF PARAMETER MATCHES FOR THE FOLLOWING EMITTER PARAMETERS: FREQUENCY, PULSE REPETITION FREQUENCY, PULSE WIDTH, JITTER, SCAN CYCLE/ANTENNA ROTATION PERIOD/SCAN RATE, SCAN TYPE AND POLARIZATION. A PARAMETER MATCH MEANS THAT AN EMITTER PARAMETER HAS BEEN DETECTED, MEASURED, AND COMPARED WITH DATA STORED IN INTELLIGENCE FILES. IT FURTHER IMPLIES THAT NO PARAMETER FOUND IS OUTSIDE THE RANGE SPECIFIED IN THE INTELLIGENCE FILE.	J3.7C3	J14.0C3	J14.2C3
004 PLATFORM EVALUATION CONFIDENCE [3 BIT]	THE PLATFORM EVALUATION CONFIDENCE IS A STATEMENT APPENDED TO A REPORT FOR THE PURPOSE OF INDICATING THE RELATIVE DEGREE OF CONFIDENCE AN EVALUATOR/OPERATOR HAS IN THE ENVIRONMENT/CATEGORY. THE PLATFORM EVALUATION CONFIDENCE IS ASSIGNED BY AN EVALUATOR/OPERATOR BASED ON INFORMATION OBTAINED FROM LOCAL SENSORS, COMPARISON OF EMITTER(S) CHARACTERISTICS TO INTELLIGENCE FILES, AND/OR INFORMATION PROVIDED BY REMOTE SOURCES.	J3.7C1	J14.0C5	

APPENDIX B

DFI NAME
431 CONFIDENCE

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 003 -----		
NO STATEMENT	0	LOW CONFIDENCE - LESS THAN 4 PARAMETER MATCHES. THE VALUE IS DETERMINED BY THE FOLLOWING RULES: A. INCREASE ONE VALUE FOR EACH ADDITIONAL PARAMETER MATCH ABOVE 3. B. INCREASE ONE VALUE FOR AN ES/ NON-ES 'OPERATOR KNOWN' ASSOCIATION (THE OPERATOR RECOGNIZES AN ASSOCIATION THAT MAY OR MAY NOT HAVE BEEN TRANSMITTED ON THE LINK). C. INCREASE TWO VALUES FOR EVERY 'OPERATOR KNOWN' EMITTER ASSOCIATION. D. THE TOTAL SHALL NOT EXCEED 5. HIGH CONFIDENCE (OPERATOR EVALUATION). POSITIVE CONFIDENCE.

DFI NAME
444 RECURRENCE RATE

DUI NAME	EXPLANATION	APPLICABILITY
021 RECURRENCE RATE, UPDATE [2 BIT] (RRN UPD)	A FACTOR WHICH REDUCES THE GIVEN RECURRENCE RATE TO PROVIDE A SLOWER RECURRENCE OF THE CONNECTIVITY STATUS MESSAGE. A FACTOR OF ZERO MEANS NO UPDATE REQUIRED.	J1.0I
022 RECURRENCE RATE, NET STATUS PARTICIPATION GROUP [4 BIT] (RRN NSN)	EXPRESSES A NUMBER 'N' WHICH, AS PART OF A TIME SLOT ASSIGNMENT, ESTABLISHES THE NUMBER OF ASSIGNED TIME SLOTS SPACED UNIFORMLY OVER EACH EPOCH.	J1.5E0
023 OVERALL RECURRENCE RATE, NET STATUS PARTICIPATION GROUP [4 BIT] (RRN ONS)	EXPRESSES A NUMBER 'N' WHICH, AS PART OF A TIME SLOT ASSIGNMENT, ESTABLISHES THE NUMBER OF ASSIGNED TIME SLOTS SPACED UNIFORMLY OVER EACH EPOCH.	J1.5E0
025 RECURRENCE RATE, RECEIPT/ COMPLIANCE [4 BIT] (RRN R/C)	IDENTIFIES THE TIME SLOT IN WHICH THE RECEIPT/COMPLIANCE FOR THE MESSAGE IS TO BE TRANSMITTED.	J0.3I J0.4I J0.6I J1.5I J1.6I J8.0I J9.0I J9.1I J10.3I J12.0I J12.1E0 J12.4I J14.2I J31.0I J31.1I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-005, 014-020, AND 022-023 -----		
1 TIME SLOT PER EPOCH	0	EXPRESSED AS A POWER OF 2, I.E. BIT CODE 1=2 TO THE FIRST POWER, BIT CODE 2=2 TO THE SECOND POWER, ETC.
2 THROUGH 32,768 TIME SLOTS PER EPOCH	1 THROUGH 15	
----- FOR DUI 013 -----		
RECURRENCE RATE NUMBER	0 THROUGH 15	

APPENDIX B

DFI NAME
444 RECURRENCE RATE

DATA ITEM (CONTINUED)
----- FOR DUI 021 -----

RECURRENCE RATE FACTOR

BIT CODE

0 THROUGH 3

EXPLANATION

A FACTOR WHICH REDUCES THE GIVEN
RECURRENCE RATE TO PROVIDE A
SLOWER RECURRENCE OF THE
CONNECTIVITY STATUS MESSAGE. A
FACTOR OF ZERO MEANS NO UPDATE
REQUIRED.

----- FOR DUI 025 -----

NO STATEMENT
NUMERIC

0
1 THROUGH 15

THE NUMERIC VALUE FOR RECEIPT/
COMPLIANCE, SPECIFIED AS
RECURRENCE RATE NUMBER, DEFINES
THE NUMBER N OF CONSECUTIVE TIME
SLOTS FROM THE ORIGINAL
TRANSMISSION TO THE DONATED TIME
SLOT: N=3X2 TO THE (15-RRN)
POWER.

DFI NAME DEFINITION
445 TEST PATTERN A SERIES OF ONES AND/OR ZEROES TRANSMITTED TO MONITOR THE
QUALITY OF THE LINK.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
004 TEST PATTERN [68 BIT]	ALTERNATING ZEROES AND ONES BEGIN- NING WITH ZERO IN BIT NUMBER 02.	J0.1E0
005 TEST PATTERN, 1 [63 BIT]	ALTERNATING ZEROES AND ONES BEGIN- NING WITH ZERO IN BIT NUMBER 07.	J0.1C21

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 004 ----- TEST PATTERN		SEE DUI EXPLANATION.
----- FOR DUI 005 ----- TEST PATTERN		SEE DUI EXPLANATION.

EXPLANATION

TRANSMIT STATUS INFORMATION
DISCRETE VALUE = 7 WHEN THE ORDER
HAS BEEN COMPLIED WITH.

UPDATES TARGET/TRACK DATA
THE SOURCE TN IS ATTACKING THE
SPECIFIED LAND (GROUND)
TRACK/TARGET.
THE SOURCE TN IS INVESTIGATING THE
SPECIFIED LAND (GROUND)
TRACK/TARGET.
THE SOURCE TN HAS LAUNCHED A
MISSILE/RELEASED A WEAPON AGAINST
THE SPECIFIED LAND GROUND
TRACK/TARGET.
THE SOURCE TN SHALL TRANSMIT THIS
STATUS INFORMATION DISCRETE AT
LEAST ONCE TO INDICATE THIS REPORT
IS A NEW SENSOR TARGET.
SUBSEQUENT PERIODIC TRANSMISSIONS
OF THE J12.6 MESSAGE WILL BE WITH
THE APPLICABLE STATUS INFORMATION
DISCRETE VALUE SET.
THE SOURCE TN SHALL TRANSMIT THE
STATUS INFORMATION DISCRETE AT
LEAST ONCE TO INDICATE IT IS NO
LONGER REPORTING THE SPECIFIED
TRACK/TARGET.
THE SOURCE TN SHALL TRANSMIT THIS
STATUS INFORMATION DISCRETE TO
INDICATE THE LAND (GROUND)

B-397

APPENDIX B

MIL-STD-6016B

APPENDIX B

DFI NAME
704 DISCRETE MESSAGE

DATA ITEM (CONTINUED)

FOR ENV/CAT = 5, LAND
(GROUND)

BIT CODE
(CONTINUED)

EXPLANATION

(CONTINUED)

TRACK/TARGET HAS BEEN DESTROYED AND IS NO LONGER A THREAT. THIS STATUS INFORMATION DISCRETE SHALL BE TRANSMITTED UNTIL SENSOR CONTACT IS CANCELLED/LOST. FOR A TARGET NOT HELD ON OWN SENSOR, THIS STATUS INFORMATION DISCRETE SHALL BE TRANSMITTED AT LEAST TWICE.

DISENGAGING

7

THE SOURCE TN SHALL TRANSMIT THIS STATUS INFORMATION DISCRETE AT LEAST TWICE TO INDICATE A DISENGAGEMENT OF THE SPECIFIED LAND (GROUND) TRACK/TARGET. THE SOURCE TN SHALL THEN TRANSMIT THE APPROPRIATE STATUS INFORMATION DISCRETE VALUE.

TARGET PARTIALLY
DESTROYED

8

THE SOURCE TN SHALL TRANSMIT THIS STATUS INFORMATION DISCRETE AT LEAST TWICE TO INDICATE THE TARGET IS PARTIALLY DESTROYED. THE SOURCE TN SHALL THEN REVERT TO SID = 0 IF THE TARGET/TRACK IS STILL HELD ON A SENSOR.

MARK POINT/POINT OF
INTEREST

9

THE SOURCE TN SHALL TRANSMIT THIS STATUS INFORMATION DISCRETE AT LEAST TWICE TO INDICATE A POINT OF INTEREST OR POTENTIAL TARGET OF OPPORTUNITY.

LOCK ON/DESIGNATED
SURFACE TARGET

10

THE SOURCE TN SHALL TRANSMIT THIS STATUS INFORMATION DISCRETE TO INDICATE A SENSOR ACQUISITION HAS BEEN OBTAINED ON THE SPECIFIED LAND (GROUND) TRACK/TARGET AND/OR THE TARGET IS THE DGT.

DFI NAME
704 DISCRETE MESSAGE

DATA ITEM (CONTINUED)

FOR ENV/CAT = 5, LAND
(GROUND)

BIT CODE
(CONTINUED)

EXPLANATION

BATTLE DAMAGE ASSESSMENT
UNKNOWN

11

THE SOURCE TN SHALL TRANSMIT THIS
STATUS INFORMATION DISCRETE AT
LEAST TWICE TO INDICATE THAT THE
BATTLE DAMAGE IS UNKNOWN.

RECOMMEND REATTACK

12

THE SOURCE TN SHALL TRANSMIT THIS
STATUS INFORMATION DISCRETE AT
LEAST TWICE TO RECOMMEND THAT
ANOTHER MISSION BE CONDUCTED
AGAINST THE TARGET.

INVESTIGATE

13

THE SOURCE TN SHALL TRANSMIT THIS
STATUS INFORMATION DISCRETE TWICE
TO A SPECIFIC ADDRESSEE TN. THE
ADDRESSEE TN SHALL TRANSMIT STATUS
INFORMATION DISCRETE VALUE = 2
WHEN THE ORDER HAS BEEN COMPLIED
WITH.

ENGAGE

14

THE SOURCE TN SHALL TRANSMIT THIS
STATUS INFORMATION DISCRETE TWICE
TO A SPECIFIC ADDRESSEE TN. THE
ADDRESSEE TN SHALL TRANSMIT STATUS
INFORMATION DISCRETE VALUE = 1
WHEN THE ORDER HAS BEEN COMPLIED
WITH.

DISENGAGE

15

THE SOURCE TN SHALL TRANSMIT THIS
STATUS INFORMATION DISCRETE TWICE
TO A SPECIFIC ADDRESSEE TN. THE
ADDRESSEE TN SHALL CEASE
TRANSMITTING STATUS INFORMATION
DISCRETE VALUE = 1 OR 2 AND
TRANSMIT STATUS INFORMATION
DISCRETE VALUE = 7 WHEN THE ORDER
HAS BEEN COMPLIED WITH.

MIL-STD-6016B
APPENDIX B

DFI NAME
705 AUTOPILOT CONTROL INDICATOR

DEFINITION
INDICATES WHETHER COMMANDS IN AIRCRAFT CONTROL MESSAGES ARE
FOR MANUAL OR AUTOPILOT CONTROL.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME

EXPLANATION

APPLICABILITY

001 AUTOPILOT CONTROL BIT
[1 BIT] (AP CNT)

J12.2I

DATA ITEM

BIT CODE

EXPLANATION

----- FOR DUI 001 -----

MANUAL

0

MESSAGES RECEIVED ARE FOR MANUAL
CONTROL.

AUTOPILOT

1

MESSAGES BEING RECEIVED ARE FOR
CONTROL OF THE AIRCRAFT THROUGH
THE AUTOPILOT COUPLER.

DFI NAME DEFINITION
706 AUTOPILOT STATUS INDICATES WHETHER OR NOT THE AUTOPILOT ON AN AIRCRAFT IS ENGAGED.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 AUTOPILOT STATUS [1 BIT] (AP STS)		J13.2C1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
MANUAL	0	AIRCRAFT IS UNDER MANUAL CONTROL BY THE PILOT.
AUTOPILOT	1	AUTOPILOT IS ENGAGED AND AIRCRAFT IS UNDER DATA LINK REMOTE CONTROL.

APPENDIX B

DFI	NAME	DEFINITION
707	CONTROL COMMAND	PROVIDES THE INFORMATION TO DIRECT THE AUTOPILOT CONTROL OF THE AIRCRAFT DURING AUTOMATIC LANDING OR FINAL PHASE OF A SURFACE TARGET VECTORING MISSION.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 VERTICAL CONTROL COMMAND [9 BIT]	THE COMMAND USED FOR DIRECT AUTO-PILOT CONTROL OF THE PITCH ATTITUDE OF THE CONTROLLED AIRCRAFT DURING AUTOMATIC LANDING CONTROL. POSITIVE VALUES ARE 'FLY-UP' COMMANDS AND NEGATIVE VALUES ARE 'FLY-DOWN' COMMANDS. THE REFERENCE PLANE IS THE PLANE DETERMINED BY THE LONGITUDINAL AND LATERAL AXES OF THE AIRCRAFT AT THE TIME OF INITIAL AUTOPILOT (COUPLER) ENGAGEMENT (INDICATED BY MESSAGE OR BY VOICE) IN THE AUTOMATIC MODE (MODE 1/1A).	J12.2I
002 LATERAL CONTROL COMMAND [9 BIT]	THE COMMAND USED FOR DIRECT AUTO-PILOT CONTROL OF THE BANK ATTITUDE OF THE CONTROLLED AIRCRAFT DURING AUTOMATIC LANDING CONTROL. POSITIVE VALUES ARE 'FLY-RIGHT' (RIGHT WING DOWN) AND NEGATIVE VALUES ARE 'FLY-LEFT' (LEFT WING DOWN), AS VIEWED BY THE PILOT. THE REFERENCE PLANE IS THE PLANE DETERMINED BY THE LONGITUDINAL AND LATERAL AXES OF THE AIRCRAFT AT THE TIME OF INITIAL AUTOPILOT (COUPLER) ENGAGEMENT (INDICATED BY MESSAGE OR BY VOICE) IN THE AUTOMATIC MODE (MODE 1/1A).	J12.2I

DFI NAME
707 CONTROL COMMAND

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
-13.5 THROUGH +13 229/512 DEGREES	0 THROUGH 511	IN 27/512 DEGREE INCREMENTS USING MODIFIED TWOS COMPLEMENT CODING.
----- FOR DUI 002 -----		
-30 THROUGH +29 452/512 DEGREES	0 THROUGH 511	IN 60/512 DEGREE INCREMENTS USING MODIFIED TWOS COMPLEMENT CODING.

APPENDIX B

DFI	NAME	DEFINITION
708	FLIGHT PATH ERROR	THE DISPLACEMENT (LATERAL OR VERTICAL) OF AN AIRCRAFT FROM A PRE-ESTABLISHED SEGMENT OF A FLIGHT PATH

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
003 VERTICAL ERROR [6 BIT]	INDICATES THE AIRCRAFT VERTICAL DISPLACEMENT RELATIVE TO THE COMMANDED ALTITUDE. POSITIVE VALUES INDICATE THAT THE AIRCRAFT IS BELOW THE COMMANDED ALTITUDE, AND NEGATIVE VALUES INDICATE THAT THE AIRCRAFT IS ABOVE THE COMMANDED ALTITUDE.	J12.2I
004 LATERAL ERROR [7 BIT]	AIRCRAFT LATERAL DISPLACEMENT RELATIVE TO THE REQUIRED COURSE LINE. POSITIVE VALUES INDICATE THAT THE AIRCRAFT IS ON THE LEFT OF THE REQUIRED COURSE LINE AS VIEWED BY THE PILOT. NEGATIVE VALUES INDICATE THAT THE AIRCRAFT IS ON THE RIGHT OF THE REQUIRED COURSE LINE.	J12.2I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 003 -----		
-640 THROUGH +620 FEET	0 THROUGH 63	IN 20 FEET INCREMENTS WITH MODIFIED TWOS COMPLEMENT CODING.
----- FOR DUI 004 -----		
-1000 THROUGH +984.375 FEET	0 THROUGH 127	IN 15.625 FEET INCREMENTS WITH MODIFIED TWOS COMPLEMENT CODING.

DFI	NAME	DEFINITION
710	RESPONSE INDICATOR	INDICATES WHETHER OR NOT A MESSAGE IS IN RESPONSE TO ANOTHER MESSAGE.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 TRACK NUMBER, REPORT/REQUEST [1 BIT] (TN R/R)	THIS FIELD INDICATES WHETHER OR NOT THE APPLICABLE TRACK NUMBER FIELDS ARE BEING REPORTED OR REQUESTED.	J7.4I
002 RESPONSE INDICATOR, EWAC [1 BIT] (REP IND)		J14.0I
003 RESPONSE INDICATOR [1 BIT] (RSP IND)	THIS FIELD INDICATES WHETHER OR NOT THE MESSAGE IS IN RESPONSE TO A DATA UPDATE REQUEST.	J3.0I J3.7I J6.0I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
REPORT	0	THIS MESSAGE IS REPORTING THE APPLICABLE TRACK NUMBERS.
REQUEST	1	THIS MESSAGE IS REQUESTING THE APPLICABLE TRACK NUMBERS.
----- FOR DUI 002 -----		
NO STATEMENT	0	
RESPONSE TO REQUEST	1	
----- FOR DUI 003 -----		
NOT RESPONDING	0	MESSAGE IS NOT IN RESPONSE TO DATA UPDATE REQUEST.
RESPONDING	1	MESSAGE IS IN RESPONSE TO DATA UPDATE REQUEST.

DFI	NAME	DEFINITION
725	MISSION CORRELATOR	AN IDENTIFYING NUMBER ASSIGNED TO AN OVERALL MISSION WHICH ENABLES PARTICIPANTS WITH DIFFERENT OBJECTIVES ON SPECIFIC MISSIONS TO BE ASSOCIATED WITH THE SAME OVERALL MISSION.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
003 MISSION CORRELATOR [8 BIT]	SPECIFIES THE IDENTIFYING NUMBER ASSIGNED TO AN OVERALL MISSION. THIS ENABLES PARTICIPANTS WITH DIFFERENT OBJECTIVES ON SPECIFIC MISSIONS TO BE ASSOCIATED WITH THE SAME OVERALL MISSION.	J2.2C5 J2.3I J2.4I J2.5I J2.6I J8.1I J10.3C2 J10.5I
004 MISSION CORRELATOR, NEW [8 BIT]	SPECIFIES THE IDENTIFYING NUMBER ASSIGNED TO REPLACE THE NUMBER PREVIOUSLY ASSIGNED TO AN OVERALL MISSION.	J8.1I
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 003-004 -----		
NO STATEMENT	0	
NUMERIC	1 THROUGH 255	

APPENDIX B

DFI	NAME	DEFINITION
730	FLIGHT LEADER INDICATOR	INDICATES WHETHER OR NOT THE AIRCRAFT IS A FLIGHT LEADER.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
001 FLIGHT LEADER INDICATOR [1 BIT] (FLT LD)	INDICATES WHETHER OR NOT THE AIRCRAFT IS A FLIGHT LEADER.	J2.2I
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NOT FLIGHT LEADER	0	
FLIGHT LEADER	1	

DFI	NAME	DEFINITION
731	IDENTIFICATION LETTER/NUMBER	A LETTER OR NUMBER USED TO IDENTIFY A SPECIFIC JU.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 WINGMAN IDENTIFICATION LETTER/ NUMBER [6 BIT]	A LETTER/NUMBER ASSIGNED TO A SPECIFIC NONC2 JU.	J2.2C5

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
WINGMAN ID LETTER	1 THROUGH 26	LETTERS A THROUGH Z.
WINGMAN ID NUMBER	27 THROUGH 35	NUMBERS 1 THROUGH 9.
UNDEFINED	36 THROUGH 63	

DFI NAME DEFINITION
732 AIRBORNE INDICATOR INDICATES WHETHER AN AIRCRAFT IS ON THE GROUND OR AIRBORNE.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
002 AIRBORNE INDICATOR [1 BIT] (ABN IND)	INDICATES WHETHER OR NOT AN AIRCRAFT IS AIRBORNE.	J2.2I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 002 -----		
NOT AIRBORNE	0	
AIRBORNE	1	

DFI	NAME	DEFINITION
746	TRACK NUMBER, ATDL-1	A FIVE CHARACTER REFERENCE NUMBER USED TO ASSOCIATE DIRECTIVES AND TRACK INFORMATION AMONG SYSTEMS EXCHANGING DATA WITH REQUIREMENTS TO IMPLEMENT ATDL-1 TRACK NUMBERS. THE NUMBER IS COMPOSED OF TWO ALPHABETIC CHARACTERS FOLLOWED BY THREE OCTAL DIGITS WHICH IDENTIFY THE ATDL-1 NUMBER WITHIN THE ORIGINATOR'S BLOCK.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
002 ATDL-1 TRACK NUMBER [16 BIT]		J7.4E0

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 002 -----

AA000 THROUGH QH777
(ALPHANUMERIC)

000000 THROUGH 177777
(OCTAL)

THIS TN IS CODED INTO FIVE GROUPS TO ALLOW THE ATDL-1 TN TO BE DERIVED. GROUP 1 IS THE MOST SIGNIFICANT 4 BITS, AND GROUPS 2, 3, 4 AND 5 CONTAIN 3 BITS EACH. THE ATDL-1 TN IS DERIVED BY INTERPRETING THE GROUPS AS FOLLOWS:

GROUP 1 (IN DECIMAL NOTATION)	GROUP 2	GROUP 3,4,5
0=A	0=A	0=0
1=B	1=B	1=1
2=C	2=C	2=2
3=D	3=D	3=3
4=E	4=E	4=4
5=F	5=F	5=5
6=G	6=G	6=6
7=H	7=H	7=7
8=I		
9=J		
10=K		
11=L		
12=M		
13=N		
14=P		
15=Q		

APPENDIX B

DFI	NAME	DEFINITION
747	TRACK NUMBER, NATO LINK 1	AN ALPHANUMERICALLY CODED REFERENCE NUMBER USED BY THE NATO AIR DEFENSE GROUND ENVIRONMENT (NADGE) SYSTEM TO IDENTIFY TRACKS. THE NUMBER CONSISTS OF FIVE CHARACTERS, TWO LETTERS FOLLOWED BY THREE DIGITS.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 NATO LINK 1 TRACK NUMBER [15 BIT]	AN ALPHANUMERICALLY CODED REFERENCE NUMBER USED BY THE NATO AIR DEFENSE GROUND ENVIRONMENT (NADGE) SYSTEM TO IDENTIFY TRACKS. THE NUMBER CONSISTS OF FIVE CHARACTERS, TWO LETTERS FOLLOWED BY THREE DIGITS.	J7.4I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
AA000 THROUGH MM777 (ALPHANUMERIC)	00000 THROUGH 77777 (OCTAL)	THE CODE IS INTERPRETED AS LLDDD (L = LETTERS; D = DIGIT). THE LETTERS AND DIGITS ARE CODED AS FOLLOWS:

OCTAL CODE		LETTER	DIGIT
0	=	A	0
1	=	E	1
2	=	G	2
3	=	H	3
4	=	J	4
5	=	K	5
6	=	L	6
7	=	M	7

DFI NAME DEFINITION
748 NATIONALITY/ALLIANCE THE AFFILIATION OF A TRACK WITH A NATION, INTERNATIONAL ALLIANCE, OR INTERNATIONAL ASSOCIATION.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 NATIONALITY/ALLIANCE OF TRACK [7 BIT]	THE COUNTRY OF ORIGIN OR POLITICAL ENTITY OF A REPORTED OBJECT OR TRACK.	J6.0I	J14.0C5	J14.2C5
DATA ITEM	BIT CODE	EXPLANATION		
----- FOR DUI 001 -----

APPENDIX B

DFI	NAME	DEFINITION
755	EPOCH SUBDIVISION	EPOCHS ARE DIVIDED INTO 64 EQUAL SUBDIVISIONS, NUMBERED 0 TO 63. THE ASSIGNMENT IS THE FIRST TIME SLOT OF THE SUBDIVISION INDICATED, N, (I.E. TIMESLOT A*N(512), N=0 TO 63). WHEN BOTH THE DELTA EPOCH AND EPOCH SUBDIVISION EQUAL ZERO, THE ASSIGNMENT SHALL BE EXECUTED IMMEDIATELY.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 EPOCH SUBDIVISION [6 BIT]	EPOCHS ARE DIVIDED INTO 64 EQUAL SUBDIVISIONS, NUMBERED 0 TO 63. THE ASSIGNMENT IS THE FIRST TIME SLOT OF THE SUBDIVISION INDICATED, N, (I.E. TIMESLOT A*N(512), N = 0 TO 63, A = TIME SLOT SET.) WHEN THE DELTA EPOCH IS EQUAL TO ZERO AND THE EPOCH SUBDIVISION IS EQUAL TO ZERO, THE ASSIGNMENT SHALL BE EXECUTED IMMEDIATELY.	J0.3I J0.4I
002 EPOCH SUBDIVISION, EXECUTION [6 BIT]	EPOCHS ARE DIVIDED INTO 64 EQUAL SUBDIVISIONS, NUMBERED 0 TO 63. THE ASSIGNMENT IS THE FIRST TIME SLOT OF THE SUBDIVISION INDICATED N, (I.E. TIME SLOT A*N(512), N = 0 TO 63, A = TIME SLOT SET). WHEN THE DELTA EPOCH IS EQUAL TO ZERO, THE ASSIGNMENT SHALL BE EXECUTED IMMEDIATELY.	J0.2I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001 AND 002 -----		
TIME SLOT (A*N(512))	0 THROUGH 63	WHERE "A" IS THE TIME SLOT SET AND 'N' VARIES FROM 0-63.

APPENDIX B

DFI NAME
756 SPARE BIT

DEFINITION
SPARE BITS ARE USED IN BIT ORIENTED MESSAGES THAT DO NOT NEED ALL THE INFORMATION BITS TO TRANSFER DATA. ALTHOUGH A SPARE BIT DOES NOT CONVEY ANY DATA, IT IS USED AS A DATA FIELD IDENTIFIER TO MAINTAIN CORRECT BIT POSITIONS AND TOTALS IN FIXED FORMAT BIT ORIENTED MESSAGES.

DATA STANDARD USAGE: Link 16

APPLICABILITY

DFI	NAME	DEFINITION
768	TRACK NUMBER, LINK 4A	A TRACK NUMBER EXCHANGED BY A TACTICAL DATA SYSTEM AND AN AIRCRAFT VIA LINK 4A TO REFERENCE AIRCRAFT OR GEOGRAPHICAL POSITIONS.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 INDEX NUMBER, THIRD PARTY [6 BIT]	THE INDEX NUMBER OF THE TARGET ASSIGNED BY THE INDEX ORIGINATOR.	J12.0C7 J12.6C2
002 INDEX NUMBER [6 BIT]		J12.0C1 J12.6I J12.7I J14.0I J14.2E0 J17.0I
003 INDEX NUMBER, A [6 BIT]	THE INDEX NUMBER ASSIGNED BY ORIGINATOR (A).	J12.5I
004 INDEX NUMBER, B [6 BIT]	THE INDEX NUMBER ASSIGNED BY ORIGINATOR (B).	J12.5E0
005 INDEX NUMBER, C [6 BIT]	THE INDEX NUMBER ASSIGNED BY ORIGINATOR (C).	J12.5E0
006 INDEX NUMBER, D [6 BIT]	THE INDEX NUMBER ASSIGNED BY ORIGINATOR (D).	J12.5E0
007 INDEX NUMBER, E [6 BIT]	THE INDEX NUMBER ASSIGNED BY ORIGINATOR (E).	J12.5E1
008 INDEX NUMBER, F [6 BIT]	THE INDEX NUMBER ASSIGNED BY ORIGINATOR (F).	J12.5E1
009 INDEX NUMBER, G [6 BIT]	THE INDEX NUMBER ASSIGNED BY ORIGINATOR (G).	J12.5E1
010 INDEX NUMBER, RELATED [6 BIT]	THE INDEX NUMBER OF THE TARGET RELATED TO THE INDEX NUMBER IN THE MESSAGE.	J12.0C6

DFI NAME
768 TRACK NUMBER, LINK 4A

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-010 -----		
NO STATEMENT	0	
NUMERIC	1 THROUGH 63	A VALUE ASSIGNED BY THE ORIGINATOR TO DIFFERENTIATE AMONG SENSOR TARGET REPORTS.

APPENDIX B

DFI	NAME	DEFINITION
769	TRACK NUMBER, LINK 16	A COMMON SET OF REFERENCE NUMBERS USED TO ASSOCIATE DIRECTIVES AND TACTICAL INFORMATION BY IDENTIFYING SYSTEM ENTITIES SUCH AS COMMUNICATING UNITS, TRACKS, TARGETS, AND SPECIAL POINTS.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 TRACK NUMBER, DEMAND ORIGINATOR A [15 BIT]	THE TRACK NUMBER OF THE UNIT ORIGINATING THE DEMAND (A).	J0.7I		
002 TRACK NUMBER, REFERENCE [19 BIT]	A REFERENCE NUMBER USED TO ASSOCIATE INFORMATION AND DIRECTIVES WITH THE TRACK.	J3.0I J3.3I J3.6I J6.0I J7.4I J10.2I J10.6I J13.2I J13.5I	J3.1I J3.4I J3.7I J7.0I J7.5I J10.3I J12.6C1 J13.3I J14.0I	J3.2I J3.5I J5.4I J7.1I J8.0E0 J10.5I J13.0I J13.4I J14.2I
003 TRACK NUMBER, SOURCE [15 BIT]	THE TN OF THE UNIT (I.E., JU OR PU) THAT ORIGINATED THE MESSAGE.	HEADER		
004 TRACK NUMBER, FRIENDLY WEAPON [19 BIT]	THE TN OF THE FRIENDLY WEAPON.	J9.0E0	J10.2C2	
005 TRACK NUMBER, TARGET [19 BIT]	THE TN OF THE TARGET OF A FRIENDLY WEAPON SYSTEM.	J10.2I		
006 TRACK NUMBER, ADDRESSEE [15 BIT]	THE TN OF A UNIT (I.E., JU OR PU) TO WHICH A MESSAGE IS ADDRESSED.	J0.3I J1.5I J8.0I J9.1I J12.1I J12.4I J15.0I J31.1I	J0.4I J1.6I J8.1I J10.3I J12.2I J12.6C1 J28.20I RTT-A	J0.6I J7.6I J9.0I J12.0I J12.3I J14.2I J31.0I
007 TRACK NUMBER, RELATED [19 BIT]	THE TN OF A JU OR POINT THAT IS RELATED TO THE REFERENCE TN IN THE MESSAGE.	J3.0C2	J7.6C3	

DFI NAME
769 TRACK NUMBER, LINK 16

DUI NAME	EXPLANATION	APPLICABILITY		
008 TRACK NUMBER, ASSOCIATED [19 BIT]	THE TN OF AN ENTITY THAT IS ASSOCIATED WITH THE SUBJECT TN OF THE MESSAGE.	J7.7I	J14.2E0	
009 TRACK NUMBER, ORIGIN [19 BIT]	THE TN IDENTIFYING THE LOCATION OF THE REPORTED BEARING'S ORIGIN, E.G., A UNIT'S LOCATION, OTHER TRACK, OR A POINT.	J3.7C1 J14.2C1	J5.4C2	J14.0E0
010 TRACK NUMBER, OBJECTIVE [19 BIT]	THE TN OF THE OBJECT OF THE ACTION DESCRIBED IN THE MESSAGE.	J6.0E0 J10.3E0 J12.5I	J9.0I J10.6I J12.6E0	J9.1I J12.0I J17.0I
011 TRACK NUMBER, JU 9 [15 BIT]	THE TN OF ONE OF A NUMBER OF JUS TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.1E0	J1.1C1	
012 TRACK NUMBER, JU 10 [15 BIT]	THE TN OF ONE OF A NUMBER OF JUS TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.1E0	J1.1C1	
013 TRACK NUMBER, JU 11 [15 BIT]	THE TN OF ONE OF A NUMBER OF JUS TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.1E0		
014 TRACK NUMBER, DEMAND ORIGINATOR B [15 BIT]	THE TRACK NUMBER OF THE UNIT ORIGINATING THE DEMAND (B).	J0.7E0		
015 TRACK NUMBER, INTERCOMMUNITY COMMUNICANT [15 BIT]	THE TN OF THE INTERCOMMUNITY COMMUNICANT BEING REPORTED IN THE MESSAGE.	J1.4I		
016 TRACK NUMBER, ADDRESSEE 6 [15 BIT]	THE TN OF ONE OF A NUMBER OF UNITS (I.E., JUS OR PUS) TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.6E0		
017 TRACK NUMBER, ADDRESSEE 1 [15 BIT]	THE TN OF ONE OF A NUMBER OF UNITS (I.E., JUS OR PUS) TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.6E0	J7.1I	J7.3I
018 TRACK NUMBER, PREVIOUSLY REPORTED [19 BIT]	THE TN THAT WAS PREVIOUSLY USED TO REPORT THE TRACK THAT NOW HAS THE EMERGENCY.	J3.1I		

APPENDIX B

DFI NAME
769 TRACK NUMBER, LINK 16

DUI NAME	EXPLANATION	APPLICABILITY
019 TRACK NUMBER, ADDRESSEE 2 [15 BIT]	THE TN OF ONE OF A NUMBER OF UNITS (I.E., JUS OR PUS) TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.6E0 J7.1C1 J7.3C1
020 TRACK NUMBER, ADDRESSEE 3 [15 BIT]	THE TN OF ONE OF A NUMBER OF UNITS (I.E., JUS OR PUS) TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.6E0 J7.1C1 J7.3C1
021 TRACK NUMBER, ADDRESSEE 4 [15 BIT]	THE TN OF ONE OF A NUMBER OF UNITS (I.E., JUS OR PUS) TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.6E0 J7.1C1 J7.3C1
022 TRACK NUMBER, ADDRESSEE 5 [15 BIT]	THE TN OF ONE OF A NUMBER OF UNITS (I.E., JUS OR PUS) TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.6E0 J7.1C1 J7.3C1
023 TRACK NUMBER, JU 8 [15 BIT]	THE TN OF ONE OF A NUMBER OF JUS TO WHICH A MESSAGE CAN BE ADDRESSED.	J1.1E0 J1.1C1
024 TRACK NUMBER, NEW CONTROL AGENCY [19 BIT]	THE TN OF THE CONTROLLING UNIT THAT WILL ASSUME CONTROL OF AN AIRCRAFT WHEN THE ACTION TO CHANGE CONTROLLING AGENCIES IS UNDER- TAKEN.	J12.4I
025 TRACK NUMBER, TARGET A [19 BIT]	THE TN OF ONE OF A NUMBER OF TARGETS THAT ARE ASSIGNED TO THE REFERENCE TN.	J10.2C1
026 TRACK NUMBER, TARGET B [19 BIT]	THE TN OF ONE OF A NUMBER OF TARGETS THAT ARE ASSIGNED TO THE REFERENCE TN.	J10.2C1
027 TRACK NUMBER, DEMAND ORIGINATOR C [15 BIT]	THE TRACK NUMBER OF THE UNIT ORIGINATING THE DEMAND (C).	J0.7E0
028 TRACK NUMBER, SUBJECT [19 BIT]	THE TN OF A TRACK OR POINT THAT IS BEING ASSOCIATED WITH THE ASSOCIATED TN.	J7.7I

DFI NAME

THE NINETEEN BITS OF THIS TN ARE
DIVIDED INTO FIVE GROUPS
CONSISTING OF TWO FIVE-BIT GROUPS
AND THREE THREE-BIT GROUPS. EACH
FIVE-BIT GROUP REPRESENTS AN
ALPHANUMERIC CHARACTER OF EITHER
AN ALPHA CHARACTER OF A THROUGH Z
(EXCLUDING THE ALPHA CHARACTERS I
AND O) OR A NUMERIC CHARACTER OF
ZERO THROUGH SEVEN. EACH THREE-
BIT GROUP REPRESENTS A NUMERIC
CHARACTER OF ZERO THROUGH SEVEN.
THEREFORE, ANY TN CAN BE
REPRESENTED BY AANNN WHERE A IS AN
ALPHANUMERIC CHARACTER CODED WITH
FIVE BITS AND N IS A NUMERIC
CHARACTER CODED WITH THREE BITS.
CODING FOR A FIVE BIT ALPHANUMERIC
CHARACTER IS SHOWN BELOW. CODING
FOR A THREE BIT NUMERIC CHARACTER
IS EXACTLY THE SAME AS ZERO
THROUGH SEVEN OF THE FIVE BIT
ALPHANUMERIC CHARACTER WITH THE
FIRST TWO LEADING ZEROES DELETED.

CODING	CHARACTER
00000	0
00001	1
00010	2

DFI NAME
771 LORAN FILTER SETTING

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 LORAN FILTER SETTING [16 BIT]	USED TO PRESET LORAN FILTER TO RE- JECT REPORTED INTERFERENCE. COM- PLETE WORD IS INSERTABLE INTO LORAN EQUIPMENT TO SELECT FILTERS.	J14.2C6

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
130/65,536 THROUGH	1 THROUGH 65535	IN 130/65,536 KHZ INCREMENTS (APPROX. 2HZ).
129 65,406/65,536 KHZ		

DFI NAME DEFINITION
775 CLOUD COVER SPECIFIES THE EXTENT OF THE CLOUD COVERAGE.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
003 CLOUD COVER, 1 [2 BIT] (CC1)		J13.0C1 J17.0I
004 CLOUD COVER, 2 [2 BIT] (CC2)		J13.0C1
005 CLOUD COVER, 3 [2 BIT] (CC3)		J13.0C1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 003-005 -----		
SKY CLEAR	0	FIELD NOT INTERPRETED IF THE CORRESPONDING CLOUD HEIGHT IS SET TO A VALUE OTHER THAN 1 THROUGH 61. SKY CLEAR IS DEFINED AS LESS THAN 1 OKTA (OR LESS THAN 0.1 SKY COVER).
SCATTERED	1	1-4 OKTAS (0.1 THROUGH 0.5 SKY COVER).
BROKEN	2	5-7 OKTAS (0.6 THROUGH 0.9 SKY COVER).
OVERCAST	3	8 OKTAS (MORE THAN 0.9 SKY COVER).

B-465

MIL-STD-6016B
APPENDIX B

DFI	NAME	DEFINITION
777	ADD/DELETE INDICATOR	AN INDICATION OF WHETHER TO ADD OR DELETE THE SECONDARY TRACK NUMBERS.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 ADD/DELETE INDICATOR [1 BIT] (A/D IND)	USED TO INDICATE WHETHER TO ADD OR DELETE THE SECONDARY TNS THAT FOLLOW.	J1.5C1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
ADD	0	
DELETE	1	

DFI NAME DEFINITION
789 ALTIMETER SETTING THE VALUE OF ATMOSPHERIC PRESSURE TO WHICH THE SCALE OF A
PRESSURE ALTIMETER IS SET.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY	
001 QNH [7 BIT]	ALTIMETER SET TO READ ZERO AT MEAN SEA LEVEL.	J13.0I	J17.0E0
002 QFE [7 BIT]	UK NATIONAL USE ONLY. ALTIMETER SET TO READ ZERO AT AIRFIELD RUNWAY (GROUND LEVEL).	J13.0E0

APPENDIX B

DFI NAME DEFINITION
797 MINUTE EXPRESSES THE MINUTE OF THE HOUR.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 EFFECTIVE FROM MINUTE [6 BIT]	THE MINUTE THAT AN ASSIGNMENT, ETC., OR CANCELLATION IS TO BECOME EFFECTIVE.	J0.6C3
002 TIME OF EVENT, MINUTE [6 BIT]	THE MINUTE (NETWORK TIME) AT WHICH THE EVENT WILL OCCUR AGAINST THE TARGET. THE MINUTE IS THE NEXT OCCURRENCE OF THE MINUTE SPECIFIED, WITH RESPECT TO NETWORK TIME.	J12.6C5
003 TIME OF OBSERVATION, MINUTE [6 BIT] (TOMIN)	THE MINUTE OF THE HOUR REPORTED AS THE OFFICIAL TIME OF OBSERVATION OF THE WEATHER INFORMATION.	J13.0I
004 MINUTE [6 BIT]	THE MINUTE OF THE HOUR.	J3.0I J3.1E0 J3.2C1 J3.3C1 J3.4C1 J3.5C1 J3.6I J3.7I J5.4I J9.0C2 J10.2C2 J12.0C4 J12.3I J12.6C2 J12.7E1 J13.2I J13.3I J13.5I J13.5C1 J14.0I J14.2E0 J17.0E0
007 EXECUTE MINUTES [6 BIT]	THE MINUTE OF THE EXECUTE HOUR WHEN THE ADDRESSEE SHALL PERFORM THE ACTION INDICATED IN THE OVER-THE-AIR REKEYING ACTION CODE.	J31.0I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-004, AND 007 -----		
0 THROUGH 59	0 THROUGH 59	IN ONE MINUTE INCREMENTS.
ILLEGAL	60 THROUGH 62	
NO STATEMENT	63	

DFI NAME DEFINITION
798 BLOCK SIZE INDICATOR INDICATES HOW THE BLOCK IS TO BE INTERPRETED.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 BLOCK SIZE INDICATOR [1 BIT] (BSI)	INDICATES HOW THE BLOCK IS TO BE INTERPRETED.	J1.3I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
REED SOLOMON CODEWORD	0	INDICATES THE BLOCK IS A REED SOLOMON CODEWORD.
TIME SLOT	1	INDICATES THE BLOCK IS A TIME SLOT.

DFI NAME DEFINITION
 799 SEQUENTIAL BLOCK/FIELD FLAG INDICATES THE CONDITION OF THE RECEIVED BLOCKS.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 SEQUENTIAL BLOCK/FIELD FLAG, 1 [1 BIT] (SBF F1)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
002 SEQUENTIAL BLOCK/FIELD FLAG, 2 [1 BIT] (SBF F2)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
003 SEQUENTIAL BLOCK/FIELD FLAG, 3 [1 BIT] (SBF F3)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
004 SEQUENTIAL BLOCK/FIELD FLAG, 4 [1 BIT] (SBF F4)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
005 SEQUENTIAL BLOCK/FIELD FLAG, 5 [1 BIT] (SBF F5)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
006 SEQUENTIAL BLOCK/FIELD FLAG, 6 [1 BIT] (SBF F6)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
007 SEQUENTIAL BLOCK/FIELD FLAG, 7 [1 BIT] (SBF F7)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
008 SEQUENTIAL BLOCK/FIELD FLAG, 8 [1 BIT] (SBF F8)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I
009 SEQUENTIAL BLOCK/FIELD FLAG, 9 [1 BIT] (SBF F9)	INDICATES THE CONDITION OF THE RECEIVED BLOCKS.	J1.3I

APPENDIX B

DFI NAME DEFINITION
802 CRYPTOMODE INDICATOR INDICATES THE MODE OF CRYPTOGRAPHIC OPERATION.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 CRYPTOMODE INDICATOR [1 BIT] (CYP MDE)	INDICATES THE MODE OF CRYPTOGRAPHIC OPERATION.	J0.3E0
002 CRYPTOMODE INDICATOR, RELAY [1 BIT] (CYP MDE)	INDICATES THE MODE OF CRYPTOGRAPHIC OPERATION.	J0.4E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
COMMON VARIABLE MODE	0	INDICATES THE COMMON VARIABLE MODE WHERE BOTH MESSAGE SECURITY (MSEC) AND TRANSMISSION SECURITY (TRANSEC) ARE PROVIDED BY THE SAME CRYPTOVARIABLE. CRYPTOVARIABLE LOGICAL LABEL NUMBER ONE AND CRYPTOVARIABLE LOGICAL LABEL NUMBER TWO WILL BOTH CONTAIN THE SAME CRYPTOVARIABLE LABEL.
PARTITIONED VARIABLE MODE	1	INDICATES THE PARTITIONED VARIABLE MODE WHERE MSEC IS PROVIDED BY ONE CRYPTOVARIABLE, AND TRANSEC IS PROVIDED BY A DIFFERENT CRYPTOVARIABLE. CRYPTOVARIABLE LOGICAL LABEL NUMBER ONE WILL CONTAIN THE LABEL OF THE TRANSEC VARIABLE, AND CRYPTOVARIABLE LOGICAL LABEL NUMBER TWO WILL CONTAIN THE LABEL OF THE MSEC VARIABLE.
----- FOR DUI 002 -----		
COMMON VARIABLE MODE	0	INDICATES THE COMMON VARIABLE MODE WHERE BOTH MESSAGE SECURITY (MSEC) AND TRANSMISSION SECURITY (TRANSEC) ARE PROVIDED BY THE SAME CRYPTOVARIABLE. CRYPTOVARIABLE LOGICAL LABEL NUMBER ONE IS THE

EXPLANATION

DFI NAME DEFINITION
806 FUEL FUNCTION USED IN CONJUNCTION WITH THE FUEL FIELD TO INDICATE EITHER
BURNABLE FUEL OR OFF-LOAD FUEL.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 FUEL FUNCTION [1 BIT] (FL FCT)	USED IN CONJUNCTION WITH THE FUEL FIELD TO INDICATE EITHER BURNABLE OR OFF-LOAD FUEL.	J13.2I J13.3C1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
BURNABLE FUEL	0	
OFF-LOAD FUEL	1	INDICATES THAT THE FUEL SPECIFIED IN THE FUEL FIELD IS AVAILABLE FOR TRANSFER.

APPENDIX B

DFI	NAME	DEFINITION
808	SURFACE (MARITIME) SPECIFIC TYPE	THE SPECIFIC TYPE OF POINT OR TRACK ON THE SURFACE (MARITIME).

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 SURFACE (MARITIME) SPECIFIC TYPE [12 BIT]	THE SPECIFIC TYPE OF POINT OR TRACK WITH AN ENVIRONMENT/CATEGORY OF SURFACE (MARITIME).	J3.3I J7.0C1 J13.3I J15.0C1	J3.7C5 J12.0C2 J14.0C5	J6.0E0 J12.6E0 J14.2C5
002 SURFACE (MARITIME) AMBIGUOUS TYPE 1 [12 BIT]	IDENTIFIES THE TARGET SPECIFIC TYPE AS DETERMINED BY AN ONBOARD CORRELATION PROCESS IF THERE ARE NO AMBIGUITIES. IDENTIFIES THE MOST PROBABLE TARGET SPECIFIC TYPE IN AN ONBOARD CORRELATION PROCESS DETERMINED THAT THE SPECIFIC TYPE IS AMBIGUOUS. INFORMATION IN THIS FIELD SHALL BE DERIVED ONLY FROM ONBOARD SOURCES AS OPPOSED TO DATA LINK SOURCES.	J12.6C4	J12.7C2	
003 SURFACE (MARITIME) AMBIGUOUS TYPE 2 [12 BIT]	IDENTIFIES THE SECOND MOST PROBABLE TARGET SPECIFIC TYPE IF AN ONBOARD CORRELATION PROCESS DETERMINES THAT THE SPECIFIC TYPE IS AMBIGUOUS. INFORMATION IN THIS FIELD SHALL BE DERIVED ONLY FROM ONBOARD SOURCES AS OPPOSED TO DATA LINK SOURCES.	J12.6C4	J12.7C2

APPENDIX B

DFI	NAME	DEFINITION
809	SUBSURFACE (MARITIME) SPECIFIC TYPE	THE SPECIFIC TYPE OF POINT OR TRACK UNDER THE SURFACE (MARITIME).

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 SUBSURFACE (MARITIME) SPECIFIC TYPE [12 BIT]	THE SPECIFIC TYPE OF POINT OR TRACK WITH AN ENVIRONMENT/CATEGORY OF SUBSURFACE (MARITIME).	J3.4C2 J7.0C1 J13.4I J15.0C1	J3.7C5 J12.0C2 J14.0C5	J6.0E0 J12.6E0 J14.2C5
002 SUBSURFACE (MARITIME) AMBIGUOUS TYPE 1 [12 BIT]	IDENTIFIES THE TARGET SPECIFIC TYPE AS DETERMINED BY AN ONBOARD CORRELATION PROCESS IF THERE ARE NO AMBIGUITIES. IDENTIFIES THE MOST PROBABLE TARGET SPECIFIC TYPE IF AN ONBOARD CORRELATION PROCESS DETERMINED THAT THE SPECIFIC TYPE IS AMBIGUOUS. INFORMATION IN THIS FIELD SHALL BE DERIVED ONLY FROM ONBOARD SOURCES AS OPPOSED TO DATA LINK SOURCES.	J12.6C4	J12.7C2	
003 SUBSURFACE (MARITIME) AMBIGUOUS TYPE 2 [12 BIT]	IDENTIFIES THE SECOND MOST PROBABLE TARGET SPECIFIC TYPE IF AN ONBOARD CORRELATION PROCESS DETERMINES THAT THE SPECIFIC TYPE IS AMBIGUOUS. INFORMATION IN THIS FIELD SHALL BE DERIVED ONLY FROM ONBOARD SOURCES AS OPPOSED TO DATA LINK SOURCES.	J12.6C4	J12.7C2

DFI NAME DEFINITION
810 LAND (GROUND) SPECIFIC TYPE THE SPECIFIC TYPE OF POINT OR TRACK ON LAND (GROUND).

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 LAND (GROUND) SPECIFIC TYPE [12 BIT]	THE SPECIFIC TYPE OF POINT OR TRACK WITH AN ENVIRONMENT/CATEGORY OF LAND (GROUND).	J3.5C1 J7.0C1 J14.0C5	J3.7C5 J12.0C2 J14.2C5	J6.0E0 J12.6E0 J15.0C1
002 LAND (GROUND) AMBIGUOUS TYPE 1 [12 BIT]	IDENTIFIES THE TARGET SPECIFIC TYPE AS DETERMINED BY AN ONBOARD CORRELATION PROCESS IF THERE ARE NO AMBIGUITIES. IDENTIFIES THE MOST PROBABLE TARGET SPECIFIC TYPE IF AN ONBOARD CORRELATION PROCESS DETERMINES THAT THE SPECIFIC TYPE IS AMBIGUOUS. INFORMATION IN THIS FIELD SHALL BE DERIVED ONLY FROM ONBOARD SOURCES AS OPPOSED TO DATA LINK SOURCES.	J12.6C4	J12.7C2	
003 LAND (GROUND) AMBIGUOUS TYPE 2 [12 BIT]	IDENTIFIES THE SECOND MOST PROBABLE TARGET SPECIFIC TYPE IF AN ONBOARD CORRELATION PROCESS DETERMINES THAT THE SPECIFIC TYPE IS AMBIGUOUS. INFORMATION IN THIS FIELD SHALL BE DERIVED ONLY FROM ONBOARD SOURCES AS OPPOSED TO DATA LINK SOURCES.	J12.6C4	J12.7C2

826	TIME TAG, TIME OF VALIDITY	IDENTIFIES THE GROUP OF 24 CONSECUTIVE TIME SLOTS DURING WHICH THE UTM/UPS POSITION IS VALID.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 TIME TAG, TIME OF VALIDITY [9 BIT] (TTG TOV)	IDENTIFIES THE GROUP OF 24 (8 TIME SLOTS * 3 SETS) CONSECUTIVE TIME SLOT SETS DURING WHICH THE UTM/UPS POSITION IS VALID.	J2.5C6 J2.6C6 J3.5C2

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		

EACH VALUE DEFINES A TIME SPAN OF 24 * 0.0078125 SECONDS = 0.1875 SECONDS. THE VALUE CORRESPONDS TO BITS 5 THROUGH 13 OF THE TIME SLOT NUMBER THUS DESIGNATING A GROUP OF 24 CONSECUTIVE TIME SLOT NUMBERS IDENTIFIED BY BITS 2 THROUGH 4 (8 TIME SLOTS) AND BITS 0 THROUGH 1 (3 SETS; A, B, AND C) OF THE TIME SLOT NUMBER. EACH VALUE CAN DEFINE EIGHT PERIODS DURING AN EPOCH DEPENDING ON THE VALUE OF BITS 14 THROUGH 16 OF THE TIME SLOT NUMBER.

004 VELOCITY COVARIANCE DATA ELEMENT 22 [10 BIT]	REPRESENTS THE ELEMENT OCCUPYING ROW 2, COLUMN 2 OF THE VELOCITY COVARIANCE DATA MATRIX.	J3.6C5
005 VELOCITY COVARIANCE DATA ELEMENT 23 [10 BIT]	REPRESENTS THE ELEMENT OCCUPYING ROW 2, COLUMN 3 OF THE VELOCITY COVARIANCE DATA MATRIX.	
006 VELOCITY COVARIANCE DATA ELEMENT 33 [10 BIT]	REPRESENTS THE ELEMENT OCCUPYING ROW 3, COLUMN 3 OF THE VELOCITY COVARIANCE DATA MATRIX.	J3.6C5

DFI NAME
1112 VELOCITY COVARIANCE DATA
ELEMENT

DATA ITEM

BIT CODE

EXPLANATION

----- FOR DUIS 001-006 -----

0 THROUGH 1

0 THROUGH 1023

ABSOLUTE VALUE OF VELOCITY
COVARIANCE DATA ELEMENT IN
INCREMENTS OF 1/1023.

DFI NAME DEFINITION
1113 VELOCITY, WGS-84 THE RATE OF CHANGE OF POSITION ALONG A DESIGNATED AXIS.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 X VELOCITY IN WGS-84 [14 BIT]	THE RATE OF CHANGE OF POSITION ALONG THE X AXIS (WGS-84 REFERENCE FRAME).	J3.6E0
002 Y VELOCITY IN WGS-84 [14 BIT]	THE RATE OF CHANGE OF POSITION ALONG THE Y AXIS (WGS-84 REFERENCE FRAME).	J3.6E1
003 Z VELOCITY IN WGS-84 [14 BIT]	THE RATE OF CHANGE OF POSITION ALONG THE Z AXIS (WGS-84 REFERENCE FRAME).	J3.6E1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-003 -----		
0 THROUGH 27,276.03 FT/ SEC	0 THROUGH 8191	IN 3.33 FEET/SEC INCREMENTS.
NO STATEMENT	8192	
-27,276.03 THROUGH -3.33 FT/SEC	8193 THROUGH 16383	

APPENDIX B

DFI NAME DEFINITION
1120 VARIANCE EXPRESSES THE VARIANCE IN A CARTESIAN REFERENTIAL.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 VARIANCE XX [8 BIT]	VARIANCE IN RELATION TO X AXIS	J12.6C7
002 VARIANCE YY [8 BIT]	VARIANCE IN RELATION TO Y AXIS	J12.6C7
003 VARIANCE ZZ [8 BIT]	VARIANCE IN RELATION TO Z AXIS	J12.6C7
004 VARIANCE XY [9 BIT]	VARIANCE IN RELATION TO X AND Y AXES	J12.6C7
005 VARIANCE XZ [9 BIT]	VARIANCE IN RELATION TO X AND Z AXES	J12.6C7
006 VARIANCE YZ [9 BIT]	VARIANCE IN RELATION TO Y AND Z AXES	J12.6C7

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-003 -----		
NUMERIC	0 THROUGH 254	0 M**2 THROUGH 2294*10**6 M**2 WITH A LOGARITHMIC CODING
NO STATEMENT	255	
----- FOR DUIS 004-006 -----		
NUMERIC	0 THROUGH 254	0 M**2 THROUGH 2294*10**6 M**2 WITH A LOGARITHMIC CODING
ILLEGAL	255	
NUMERIC	256 THROUGH 510	0 M**2 THROUGH -2294*10**6 M**2 WITH A LOGARITHMIC CODING
NO STATEMENT	511	

DFI NAME
1203 FREQUENCY AGILITY

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
----------	-------------	---------------

001 FREQUENCY AGILITY INDICATOR [2 BIT] (FREQ AGIL IND)	INDICATES THE SENSOR'S RADAR IS IN THE FREQUENCY AGILITY MODE OR THE COMMANDED MODE.	J12.6C6
--	--	---------

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 001 -----

FIXED FREQUENCY MODE	0	INDICATES FIXED FREQUENCY MODE IS ENABLED IN THE SENDER'S RADAR IF THE SENSOR STATUS/COMMAND INDICATOR FIELD IS SET TO 0. IF THE SENSOR STATUS/COMMAND INDICATOR FIELD IS SET TO 1, THEN THIS IS THE COMMANDED MODE OF OPERATION FROM THE SENDER.
FREQUENCY AGILE MODE	1	INDICATES FREQUENCY AGILE MODE IS ENABLED IN THE SENDER'S RADAR IF THE SENSOR STATUS/COMMAND INDICATOR FIELD IS SET TO 0. IF THE SENSOR STATUS/COMMAND INDICATOR FIELD IS SET TO 1, THEN THIS IS THE COMMANDED MODE OF OPERATION FROM THE SENDER.

UNDEFINED	2 THROUGH 3	
-----------	-------------	--

DFI NAME DEFINITION
1204 PDI PULSE DOPPLER ILLUMINATION.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
----------	-------------	---------------

001 PDI INDICATOR [1 BIT] (PDI IND)	INDICATES PDI/MISSILE DATA LINK CHANNEL FIELD CONTAINS PDI CHANNEL DATA.	J12.6C6
--	--	---------

002 PDI/MISSILE DATA LINK CHANNEL [9 BIT]	RADAR CHANNEL SELECTED FOR PDI.	J12.6C6
--	---------------------------------	---------

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 001 -----

MISSILE DATA LINK CHANNEL REPORTED	0	INDICATES THAT THE PDI/MISSILE DATA LINK CHANNEL FIELD CONTAINS MISSILE DATA LINK CHANNEL DATA.
PDI CHANNEL REPORTED	1	INDICATES THAT THE PDI/MISSILE DATA LINK CHANNEL CONTAINS PDI CHANNEL DATA.

----- FOR DUI 002 -----

NO STATEMENT CHANNEL 1 THROUGH 511	0 1 THROUGH 511	DEFINES THE RADAR CHANNEL SELECTED FOR PULSE DOPPLER ILLUMINATION OR AIR-TO-AIR MISSILE DATA LINK.
---------------------------------------	--------------------	--

DFI	NAME	DEFINITION	
1206	DATA LINK		
DATA STANDARD USAGE: Link 16		STATUS:	
DUI NAME	EXPLANATION	APPLICABILITY	
001 AIR-GROUND WEAPON DATA LINK CHANNEL [5 BIT]	DEFINES THE AIR-GROUND WEAPON DATA LINK CHANNEL SELECTED.	J12.6C6	
DATA ITEM	BIT CODE	EXPLANATION	
----- FOR DUI 001 -----			
NO STATEMENT CHANNEL 1 THROUGH 31	0 1 THROUGH 31	DEFINES THE A/G WEAPON DATA LINK CHANNEL SELECTED FOR USE AGAINST THE TARGET.	

DFI NAME
1207 ARM

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 ARM THREAT NUMBER [8 BIT]	PROVIDES A WEAPON-UNIQUE THREAT NUMBER ASSIGNED TO A TARGET.	J12.6C6
002 ARM TYPE [4 BIT]	INDICATES THE TYPE OF ARM THREAT NUMBER IN THE ARM THREAT NUMBER FIELD.	J12.6C6

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 001 -----

NO STATEMENT	0	
THREAT NUMBER 1 THROUGH 255	1 THROUGH 255	PROVIDES THE ARM-SPECIFIC THREAT NUMBER ASSOCIATED WITH THE TARGET. THE TYPE OF THREAT CORRESPONDS TO EACH THREAT NUMBER WHICH IS DEPENDENT UPON THE ARM TYPE AND MAY BE PREBRIEFED PRIOR TO THE MISSION.

----- FOR DUI 002 -----

NO STATEMENT	0
AGM 88	1
AGM 45	2
UNDEFINED	3 THROUGH 15

DFI NAME
1301 FUSION TYPE

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 FUSION TYPE [1 BIT] (FT)	INDICATES THE TYPE OF FUSION USED TO PRODUCE REPORTED SENSOR INFORMATION.	J12.6C2 J12.7I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
SENSOR FUSION	0	INDICATES THAT SENSOR DATA REPORT IS A RESULT OF INFORMATION FROM ONBOARD SENSORS.
DATA FUSION	1	INDICATES THAT SENSOR DATA REPORT IS A RESULT OF INFORMATION FROM ONBOARD SENSORS COMBINED WITH THAT RECEIVED FROM REMOTE SOURCES.

DFI NAME DEFINITION
1351 SENSOR TARGET REPORTING STATUS

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 SENSOR TARGET REPORTING STATUS [1 BIT] (STR STS)	EXPRESSES SENSOR TARGET REPORTING STATUS.	J13.2C1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
REPORTING ALL	0	AIRCRAFT IS REPORTING ALL LOCALLY DERIVED TARGETS ON THE CONTROL NPG.
NOT REPORTING ALL	1	AIRCRAFT IS NOT REPORTING ALL LOCALLY DERIVED TARGETS ON THE CONTROL NPG. ENGAGEMENT STATUS REPORTING IS NOT INHIBITED.

B-655

MIL-STD-6016B
APPENDIX B

APPENDIX B

DFI NAME DEFINITION
1401 VELOCITY. PROVIDES VELOCITY COMPONENTS

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 OBSERVER VELOCITY NORTH [12 BIT]	PROVIDES THE TARGET OBSERVER'S VELOCITY ALONG THE LOCAL NORTH AXIS, DEFINED AT THE LATITUDE AND LONGITUDE IN THE J12.7I WORD.	J12.7C1
002 OBSERVER VELOCITY EAST [12 BIT]	PROVIDES THE TARGET OBSERVER'S VELOCITY ALONG THE LOCAL EAST AXIS, DEFINED AT THE LATITUDE AND LONGITUDE IN THE J12.7I WORD.	J12.7C1
003 OBSERVER VELOCITY DOWN [12 BIT]	PROVIDES THE TARGET OBSERVER'S VELOCITY ALONG THE LOCAL DOWN AXIS, DEFINED AT THE LATITUDE AND LONGITUDE IN THE J12.7I WORD.	J12.7C3
006 VELOCITY, DOWN [13 BIT]	PROVIDES THE DOWN COMPONENT OF THE TARGET'S VELOCITY REFERENCED TO THE HORIZON. BELOW THE HORIZON IS POSITIVE.	J12.6C3

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-003 -----		
0 THROUGH 2047 FEET PER SECOND	0 THROUGH 2047	IN 1 FT/SEC INCREMENTS.
NO STATEMENT	2048	
-2047 THROUGH -1 FEET PER SECOND	2049 THROUGH 4095	IN 1 FT/SEC INCREMENTS.
----- FOR DUI 006 -----		
0 THROUGH 4095 FEET PER SECOND	0 THROUGH 4095	IN 1 FT/SEC INCREMENTS.
NO STATEMENT	4096	
-4095 THROUGH -1 FEET PER SECOND	4097 THROUGH 8191	IN 1 FT/SEC INCREMENTS.

DFI NAME DEFINITION
1502 AGILE EMITTER

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 AGILE EMITTER [1 BIT] (AG EMT)		J14.0I

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 001 -----

NO STATEMENT	0	
AGILE EMITTER	1	THE REPORTED PARAMETRIC INFORMATION IS AN ADDITIONAL SET OF DATA WHICH IS IDENTIFIED AS EMANATING FROM THE SAME EMITTER AS THE INFORMATION PREVIOUSLY REPORTED.

DFI NAME
1520 FILTER UNIT TYPE

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME

EXPLANATION

APPLICABILITY

001 FILTER UNIT TYPE
[3 BIT]

INDICATES WHETHER THE REQUESTED OR
REPORTED FILTER APPLIES TO AN
INDIVIDUAL UNIT OR FORWARDED DATA.

J7.6I

DATA ITEM

BIT CODE

EXPLANATION

----- FOR DUI 001 -----

INDIVIDUAL UNIT
FJUA

0
1

FILTER(ING) OWN UNIT REPORTS.
FILTER(ING) REPORTS FORWARDED FROM
LINK 16 TO LINK 11.

FJUB

2

FILTER(ING) REPORTS FORWARDED FROM
LINK 16 TO LINK 11B.

FJUAB

3

FILTER(ING) REPORTS FORWARDED FROM
LINK 16 TO LINK 11 AND LINK 11B.

UNDEFINED

4 THROUGH 7

DFI NAME DEFINITION
1539 EPOCH NUMBER AN INTEGER USED TO DESIGNATE A PARTICULAR EPOCH, ASSIGNED SEQUENTIALLY FROM 0 THROUGH 112.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 EPOCH NUMBER, EXECUTION [7 BIT]	SPECIFIES THE EPOCH AT WHICH THE TIME CHANGE SHALL BE MADE.	J0.2I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
EPOCH NUMBER	0 THROUGH 112	IN 1 NUMBER INCREMENTS.
ILLEGAL	113 THROUGH 127	

DFI NAME DEFINITION
1540 PATH QUALITY DESCRIBES PATH MONITORING AND NUMBER OF MISSED MESSAGES.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 PATH QUALITY MONITORING [2 BIT] (PQL MON)	DESCRIBES THE TYPE OF PATH MONITOR TO BE USED.	J1.6I
002 PATH QUALITY THRESHOLD, 1 [3 BIT] (PQL TH1)	DESCRIBES NUMBER OF SUCCESSIVE MISSED MESSAGES PRIOR TO REPORTING A PATH PROBLEM.	J1.6I
003 PATH QUALITY THRESHOLD, 2 [4 BIT]	DESCRIBES NUMBER OF SUCCESSIVE MISSED MESSAGES PRIOR TO REPORTING A PATH FAILURE.	J1.6I

DATA ITEM	BIT CODE	EXPLANATION
-----------	----------	-------------

----- FOR DUI 001 -----

NO PATH MONITORING	0
1-WAY PATH MONITORING	1
2-WAY PATH MONITORING	2
UNDEFINED	3

----- FOR DUI 002 -----

NO STATEMENT	0	USE DEFAULT VALUE.
NUMBER OF MISSED MESSAGES	1 THROUGH 7	

----- FOR DUI 003 -----

NO STATEMENT	0
NUMBER OF MISSED MESSAGES	1 THROUGH 15

DFI NAME DEFINITION
1541 MESSAGES RECEIVED INDICATOR INDICATES WHETHER OF NOT A MESSAGE WAS RECEIVED FROM THE CONTROLLING NCU SINCE THE LAST REPORT.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 MESSAGE RECEIVED INDICATOR [1 BIT] (MRI)	INDICATES WHETHER OR NOT A MESSAGE WAS RECEIVED FROM THE CONTROLLING NCS SINCE THE LAST REPORT (J1.4).	J1.4I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO MESSAGE RECEIVED	0	NO MESSAGE RECEIVED OR MESSAGE RECEIVED BUT UNINTELLIGIBLE.
MESSAGE CORRECTLY RECEIVED	1	

DFI NAME DEFINITION
1542 NET CONTROL NUMBER USED TO VERIFY SEQUENTIAL RECEPTION OF NET CONTROL MESSAGES.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 NET CONTROL MESSAGE SEQUENCE NUMBER [1 BIT] (NC MSN)	THE VALUE IN THIS FIELD ALTERNATES AS COMMANDS ARRIVE. THIS COULD BE INTERPRETED AS THE PARITY OF THE COMMAND NUMBER (I.E. ON THE FIRST, THIRD, FIFTH, ETC. COMMANDS THIS FIELD WOULD BE SET TO 1, ON THE SECOND, FOURTH, SIXTH, ETC. IT WOULD BE SET TO 0).	J1.4I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
PARITY NUMBER	0 THROUGH 1	

DFI NAME DEFINITION
1543 REPORT FORMAT IDENTIFIES THE SET OF COMMUNICANTS BEING REPORTED.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 REPORT FORMAT INDICATOR [2 BIT] (RFI)	INDICATES WORD REPORTS ON THE STATUS OF THE FIRST, SECOND, THIRD, AND FOURTH 32 COMMUNICANTS.	J1.4E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
FIRST 32 COMMUNICANTS	0	
SECOND 32 COMMUNICANTS	1	
THIRD 32 COMMUNICANTS	2	
FOURTH 32 COMMUNICANTS	3	

DFI NAME
1544 TIMEOUT INTERVAL

DEFINITION
THE NUMBER OF 6 SECOND REPORTING INTERVALS THAT MUST PASS, IN WHICH A TERMINAL RECEIVES NO MESSAGE FROM ITS CONTROLLING NCU, BEFORE A TERMINAL WILL CONSIDER ITS NCU TO HAVE FAILED AND WILL ATTEMPT CONTROL NET ENTRY.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 TIMEOUT INTERVAL [5 BIT]	THE NUMBER OF 6 SECOND INTERVALS THAT MUST PASS IN WHICH A TERMINAL RECEIVES NO MESSAGE FROM ITS' CONTROLLING NCS BEFORE A TERMINAL WILL CONSIDER ITS' NCS TO HAVE FAILED AND WILL ATTEMPT CONTROL NET ENTRY.	J1.5I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NUMERIC	0 THROUGH 30	
NO STATEMENT	31	

DFI NAME DEFINITION
1545 LANDING APPROACH CONDITION DESCRIBES THE LANDING AND APPROACH CONDITIONS RELATING TO THE SHIPS FLIGHT DECK.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 LANDING APPROACH CONDITION [3 BIT]	DESCRIBES THE METEOROLOGICAL CONDITION OF THE APPROACH AND RECOVERY ROUTE TO THE AIRCRAFT CARRIER.	J13.0I J13.3I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
CV RECOVERY CASE I	1	THE APPROACH AND RECOVERY ROUTE TO THE CV ARE UNDER VISUAL METEOROLOGICAL CONDITIONS.
CV RECOVERY CASE II	2	THE APPROACH AND RECOVERY ROUTE TO THE CV ARE VARYING BETWEEN INSTRUMENT AND VISUAL METEOROLOGICAL CONDITIONS.
CV RECOVERY CASE III	3	THE APPROACH AND RECOVERY ROUTE TO THE CV ARE UNDER INSTRUMENT METEOROLOGICAL CONDITIONS.
UNDEFINED	4 THROUGH 7	

B-665

MIL-STD-6016B
APPENDIX B

DFI	NAME	DEFINITION
1546	CRYPTOPERIOD DESIGNATOR	DESIGNATES THE TIME PERIOD IN WHICH THE CRYPTOVARIABLE IS USED.

DATA STANDARD USAGE: Link 16

STATUS:

DUI	NAME	EXPLANATION	APPLICABILITY
001	CRYPTOPERIOD DESIGNATOR, LOCATION 0 [1 BIT] (CPD L0)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 0.	J31.0E0
002	CRYPTOPERIOD DESIGNATOR, LOCATION 1 [1 BIT] (CPD L1)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 1.	J31.0E0
003	CRYPTOPERIOD DESIGNATOR, LOCATION 2 [1 BIT] (CPD L2)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 2.	J31.0E0
004	CRYPTOPERIOD DESIGNATOR, LOCATION 3 [1 BIT] (CPD L3)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 3.	J31.0E0
005	CRYPTOPERIOD DESIGNATOR, LOCATION 4 [1 BIT] (CPD L4)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 4.	J31.0E0
006	CRYPTOPERIOD DESIGNATOR, LOCATION 5 [1 BIT] (CPD L5)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 5.	J31.0E0
007	CRYPTOPERIOD DESIGNATOR, LOCATION 6 [1 BIT] (CPD L6)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 6.	J31.0E0
008	CRYPTOPERIOD DESIGNATOR, LOCATION 7 [1 BIT] (CPD L7)	THE CRYPTOPERIOD DESIGNATOR FOR THE CRYPTOVARIABLE STORED IN SDU LOCATION 7.	J31.0E0
009	CRYPTOPERIOD DESIGNATOR, CURRENT [1 BIT] (CPD CUR)	CRYPTOPERIOD DESIGNATOR FOR THE CURRENT CRYPTOPERIOD.	J31.0C1
010	CRYPTOPERIOD DESIGNATOR, REKEY [1 BIT] (CPD RKY)	THE CRYPTOPERIOD DESIGNATOR OF THE CRYPTOVARIABLE THAT IS TO BE	J31.0C2 J31.1I

DFI NAME
1546 CRYPTOPERIOD DESIGNATOR

DUI NAME	EXPLANATION	APPLICABILITY
010 (CONTINUED)	REKEYED.	

011 CRYPTOPERIOD DESIGNATOR, SYNCHRONIZATION [1 BIT] (CPD SYN)	THE CRYPTOPERIOD DESIGNATOR OF THE CRYPTOVARIABLE TO BE USED FOR REKEY SYNCHRONIZATION.	J31.0C2

DFI NAME
1681 TIME FUNCTION

DATA ITEM (CONTINUED) ----- FOR DUI 004 -----	BIT CODE	EXPLANATION
NO STATEMENT	0	
TIME OF OBSERVATION	1	THE TIME (MINUTE, SECOND, AND HUNDREDTHS FIELDS COLLECTIVELY) REPRESENTS THE TIME AT WHICH THE TARGET WAS ACTUALLY OBSERVED BY THE REPORTING UNIT. THE TIME IS REFERENCED TO NETWORK TIME.
TIME OF EXTRAPOLATION	2	THE TIME (MINUTE, SECOND, AND HUNDREDTHS FIELDS COLLECTIVELY) REPRESENTS THE TIME TO WHICH THE REPORTING JU LAST EXTRAPOLATED THE TARGET. THE TIME IS REFERENCED TO NETWORK TIME, AND APPLIES TO ALL PARAMETERS EXCEPT LATITUDE AND LONGITUDE WHICH ARE EXTRAPOLATED TO TIME OF TRANSMISSION.
TRACK AGE	3	THE TIME (MINUTE, SECOND, AND HUNDREDTHS FIELDS COLLECTIVELY) REPRESENTS THE LENGTH OF TIME THAT HAS PASSED SINCE TARGET WAS LAST EXTRAPOLATED. THIS FIELD VALUE IS ONLY USED WHEN NONE OF THE TARGET DATA IS EXTRAPOLATED BY THE SENDER UP TO THE TIME OF TRANSMISSION OF THE DATA. THIS TIME IS REFERENCED TO NETWORK TIME.
UNDEFINED GREATER THAN 1 HOUR	4 THROUGH 6 7	MORE THAN AN HOUR HAS PASSED SINCE THE TARGET WAS LAST EXTRAPOLATED. DO NOT INTERPRET THE MINUTE, SECOND, OR HUNDREDTHS FIELDS.

DFI NAME
1725 CONNECTIVITY QUALITY

DUI NAME	EXPLANATION	APPLICABILITY
141 MINIMUM CONNECTIVITY QUALITY REQUESTED [2 BIT] (CQ MIN)	INDICATES THE MINIMUM CONNECTIVITY QUALITY ALL ALONG THE ROUTE REQUESTED BY THE ORIGINATOR UNIT.	J1.2I
142 MAXIMUM CONNECTIVITY QUALITY PROVIDED [2 BIT] (CQ MAX)	INDICATES THE MAXIMUM CONNECTIVITY QUALITY OF THE ROUTE.	J1.2I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-140 -----		
NO MESSAGE RECEIVED FROM ASSOCIATED SOURCE OR ERASURE COUNT EXCEEDS 12(8-57,1) ERASURES	0	
LESS THAN OR EQUAL TO 12(8-57,1) ERASURES	1	
LESS THAN OR EQUAL TO 8(4-48,1) ERASURES	2	
LESS THAN OR EQUAL TO 4(1-32,1) ERASURES	3	
----- FOR DUIS 141-142 -----		
NUMERIC	0 THROUGH 3	0 LOWEST CONNECTIVITY QUALITY. 3 HIGHEST CONNECTIVITY QUALITY.

B-787

MIL-STD-6016B
APPENDIX B

DFI	NAME	DEFINITION
1726	CONNECTIVITY INTERROGATION INSTRUCTION	INDICATES WHAT TYPE OF CONNECTIVITY IS BEING REQUESTED FROM THE ADDRESSEE(S) TO SUPPORT ROUTE ESTABLISHMENT.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
001 CONNECTIVITY INTERROGATION INSTRUCTION [2 BIT] (CII)	INDICATES WHAT TYPE OF CONNECTIVITY IS BEING REQUESTED FROM THE ADDRESSEE(S) TO SUPPORT ROUTE ESTABLISHMENT.	J1.0I
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
BROADCAST	0	BROADCAST REQUEST FROM ANY UNIT WITHIN LINE-OF-SIGHT TO SOURCE. DISREGARD ROUTE NUMBER AND UPDATE RECURRENCE RATE.
DIRECT CONNECTIVITY REQUEST	1	ADDRESSED TO JU(S) REFERENCED IN MESSAGE FOR THEIR DIRECT CONNECTIVITY.
INDIRECT CONNECTIVITY REQUEST, LEVEL 1	2	ADDRESSED TO JU(S) ASSOCIATED WITH SOURCE JU ROUTE NUMBER TO ELICIT THEIR CONNECTIVITY WITH RESPECT TO THE JU(S) REFERENCED IN MESSAGE.
INDIRECT CONNECTIVITY REQUEST, LEVEL 2	3	ADDRESSED TO JU(S) ASSOCIATED WITH SOURCE JU ROUTE NUMBER TO ELICIT THE CONNECTIVITY OF THE JU(S) REFERENCED IN MESSAGE.

DFI	NAME	DEFINITION
1727	ROUTE NUMBER	INDICATES A NUMBER WITHIN THE ROUTE DIRECTORY THAT IS ASSOCIATED WITH THE SOURCE OF THE MESSAGE. THE ROUTE DIRECTORY INCLUDES RELAY/DESTINATION TRACK NUMBERS FOR EACH SOURCE TRACK NUMBER.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 ROUTE NUMBER [4 BIT]	INDICATES A NUMBER WITHIN THE ROUTE DIRECTORY THAT IS ASSOCIATED WITH THE SOURCE OF THE MESSAGE. THE ROUTE DIRECTORY INCLUDES RELAY/ DESTINATION TNS FOR EACH SOURCE TN.	J1.0I

002 ROUTE NUMBER, 2 [4 BIT]		J0.5I
--------------------------------	--	-------

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
ROUTE NUMBER	0 THROUGH 15	ROUTE DIRECTORY INDEX ASSOCIATED WITH SOURCE OF MESSAGE. THE ROUTE DIRECTORY INCLUDES RELAY/ DESTINATION JU TNS FOR EACH SOURCE JU ROUTE NUMBER.
----- FOR DUI 002 -----		
NUMERIC	0 THROUGH 15	0: NO STATEMENT 1 THROUGH 15: INDICATES THE ROUTE NUMBER.

DFI	NAME	DEFINITION
1728	CONNECTIVITY STATUS INSTRUCTION	INDICATES WHETHER THE CONNECTIVITY OF THE SOURCE TRACK NUMBER AS REPORTED IN THE MESSAGE IS BEING ADDED OR DELETED.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 CONNECTIVITY STATUS INSTRUCTION [2 BIT] (CSI)	INDICATES WHETHER THE CONNECTIVITY OF THE SOURCE TRACK NUMBER AS REPORTED IN THE MESSAGE IS BEING ADDED OR DELETED.	J1.1I

DFI NAME
1734 RELAY ROUTE INDICATOR
PARAMETERS

DEFINITION
AN INDICATOR THAT IF MATCHES THE ROUTE NUMBER, THE MESSAGE IS
TO BE REPROMULGATED.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 RRIP, ROUTE 1 [1 BIT] (RRI 1)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 1.	J0.4C2
002 RRIP, ROUTE 2 [1 BIT] (RRI 2)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 2.	J0.4C2
003 RRIP, ROUTE 3 [1 BIT] (RRI 3)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 3.	J0.4C2
004 RRIP, ROUTE 4 [1 BIT] (RRI 4)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 4.	J0.4C2
005 RRIP, ROUTE 5 [1 BIT] (RRI 5)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 5.	J0.4C2
006 RRIP, ROUTE 6 [1 BIT] (RRI 6)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 6.	J0.4C2
007 RRIP, ROUTE 7 [1 BIT] (RRI 7)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 7.	J0.4C2
008 RRIP, ROUTE 8 [1 BIT] (RRI 8)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 8.	J0.4C2
009 RRIP, ROUTE 9 [1 BIT] (RRI 9)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 9.	J0.4C2
010 RRIP, ROUTE 10 [1 BIT] (RRI 10)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 10.	J0.4C2
011 RRIP, ROUTE 11 [1 BIT] (RRI 11)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 11.	J0.4C2
012 RRIP, ROUTE 12 [1 BIT] (RRI 12)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 12.	J0.4C2
013 RRIP, ROUTE 13 [1 BIT] (RRI 13)	SPECIFIES THE RELAY ROUTE INDICATOR PARAMETER FOR ROUTE 13.	J0.4C2

DFI NAME DEFINITION
1767 ESTIMATED YIELD AN ESTIMATE OF THE YIELD OF A NUCLEAR DETONATION EXPRESSED IN MEGATONS.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 ESTIMATED YIELD [2 BIT] (EST YLD)	AN ESTIMATE OF THE YIELD OF A NUCLEAR DETONATION EXPRESSED IN MEGATONS, AND IS USED ONLY WITH POINT TYPE = 0, POINT AMP = 4.	J3.0E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
SMALL	1	LESS THAN 0.1 MEGATON.
MEDIUM	2	0.1 TO 1.0 MEGATON.
LARGE	3	GREATER THAN 1.0 MEGATON.

DFI NAME
1768 TYPE OF BURST

DEFINITION
EXPRESSES THE TYPE OF BURST FROM A NUCLEAR DETONATION.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 TYPE OF BURST [3 BIT]	EXPRESSES THE TYPE OF BURST FROM A NUCLEAR DETONATION, AND IS USED ONLY WITH POINT TYPE = 0, POINT AMP = 4.	J3.0E0

DFI	NAME	DEFINITION
1769	ACTION, COMMUNICATION CONTROL	DESCRIBES THE COMMUNICATIONS CONTROL ACTION TO BE ACCOMPLISHED.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 ACTION, COMMUNICATION CONTROL [2 BIT] (COM CON)	DESCRIBES THE COMMUNICATIONS CONTROL ACTION TO BE ACCOMPLISHED.	J0.6I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
TERMINAL INTERROGATION	0	THE RECEIVING TERMINAL IS TO TRANSMIT THE MESSAGE INDICATED IN THE TIME SLOT SPECIFIED. ONLY THE J0.1 OR J2 MESSAGES WITH AN APPROPRIATE SUBLABEL MAY BE REQUESTED.
INITIATE TRANSMISSION	1	THE RECEIVING HOST SYSTEM IS TO TRANSMIT AVAILABLE INFORMATION IN THE PARTICIPATION GROUP INDICATED UNTIL ALL AVAILABLE INFORMATION HAS BEEN TRANSMITTED, OR UNTIL THE TIME PERIOD INDICATED BY THE TRANSMISSION TIME LIMIT GIVEN IN THE TRANSMISSION TERMINATION DESIGNATOR FIELD HAS EXPIRED.
TERMINATE TRANSMISSION	2	THE RECEIVING HOST SYSTEM HAS TERMINATED TRANSMISSION OF THE INFORMATION IN THE PARTICIPATION GROUP INDICATED.
CONTROL REQUEST	3	THE RECEIVING HOST SYSTEM IS REQUESTED TO TAKE ACTION AS INDICATED IN THE CONTINUATION WORD.

DFI	NAME	DEFINITION
1770	TRANSMISSION TERMINATION DESIGNATOR	DEFINES THE MAXIMUM TIME ALLOWABLE FOR MESSAGE TRANSMISSION IN THE PARTICIPATION GROUP INDICATED.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
001 TRANSMISSION TERMINATION DESIGNATOR [4 BIT] (TT DES)	DEFINES THE MAXIMUM TIME ALLOWABLE FOR MESSAGE TRANSMISSION IN THE PARTICIPATION GROUP INDICATED.	J0.6I
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO TIME LIMIT SPECIFIED	0	THE RECEIVING HOST SYSTEM IS TO TRANSMIT ALL AVAILABLE INFORMATION IN THE PARTICIPATION GROUP INDICATED TAKING WHATEVER TIME PERIOD THAT IS REQUIRED.
RECURRENCE RATE NUMBER FOR COMPUTING TRANSMISSION TIME LIMIT	1 THROUGH 15	THE RECEIVING HOST SYSTEM IS TO TRANSMIT ALL AVAILABLE INFORMATION IN THE PARTICIPATION GROUP INDICATED FOR A TIME PERIOD IN SECONDS NOT TO EXCEED 3 X (2 TO THE POWER (8-RRN)).

DFI NAME
1771 ACTION, TIME SLOT ASSIGNMENT

DEFINITION
DESCRIBES THE TIME SLOT ASSIGNMENT ACTION THAT IS BEING REQUESTED.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 ACTION, TIME SLOT REQUEST [2 BIT] (ACT TSR)	DESCRIBES THE TIME SLOT ASSIGNMENT ACTION THAT IS BEING REQUESTED.	J0.6C1

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
ASSIGNMENT REQUEST	0	THE ORIGINATOR OF THIS MESSAGE REQUESTS ASSIGNMENT OF ADDITIONAL TIME SLOT BLOCKS AS INDICATED.
DEASSIGNMENT REQUEST	1	THE ORIGINATOR OF THIS MESSAGE CAN RELEASE THE INDICATED TIME SLOT BLOCKS.
REASSIGNMENT REQUEST	2	THE ORIGINATOR OF THIS MESSAGE REQUESTS THE REASSIGNMENT OF THE INDICATED TIME SLOT BLOCKS TO THE PARTICIPATION GROUP GIVEN IN THE INITIAL WORD.
UNDEFINED	3	

DFI	NAME	DEFINITION
1772	ACCESS DESCRIPTION	DESCRIBES THE ACCESS MODE AND ASSOCIATED PARAMETERS CONNECTED WITH THE ASSIGNMENT OF TIME SLOTS.

DATA STANDARD USAGE: Link 16	STATUS:

DFI	NAME	DEFINITION
1776	REPROMULGATION RELAY STATE	INDICATES WHETHER OR NOT A TERMINAL IS TO RELAY REPROMULGATION RELAY MESSAGES.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
001 REPROMULGATION RELAY STATE [1 BIT] (RR STE)	INDICATES WHETHER OR NOT A TERMINAL IS TO RELAY REPROMULGATION RELAY MESSAGES.	J1.5I
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
DO NOT RELAY REPROMULGA- TION RELAY MESSAGES	0	
RELAY REPROMULGATION RE- LAY MESSAGES	1	A TERMINAL SHOULD RELAY ALL REPROMULGATION RELAY MESSAGES RECEIVED IF THE REPROMULGATION COUNTER IN THE RECEIVED MESSAGE IS GREATER THAN ZERO.

DFI	NAME	DEFINITION
1777	CONNECTIVITY MONITOR, ENABLE	INDICATES WHETHER OR NOT A TERMINAL IS TO MONITOR CONNECTIVITY BY LISTENING TO NET STATUS NEEDLINE PARTICIPATION GROUP TRANSMISSIONS.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
001 CONNECTIVITY MONITOR, ENABLE [1 BIT] (CON MON)	INDICATES WHETHER OR NOT A TERMINAL IS TO MONITOR CONNECTIVITY BY LISTENING TO NET STATUS NEEDLINE PG TRANSMISSIONS.	J1.5I
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
DO NOT MONITOR CONNECTIVITY	0	
MONITOR CONNECTIVITY	1	THE TERMINAL SHOULD MONITOR CONNECTIVITY BY LISTENING TO THE NET STATUS NEEDLINE PG TRANSMISSIONS AND SHOULD ESTABLISH LINK QUALITY VALUES FOR ALL COMMUNICANTS.

DFI	NAME	DEFINITION
1778	REPROMULGATION ORIGINATION CONTROL	INDICATES WHETHER OR NOT A JU MAY ORIGINATE REPROMULGATION MESSAGES.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 REPROMULGATION ORIGINATION CONTROL [1 BIT] (RPR OC)	INDICATES WHETHER OR NOT A JU MAY ORIGINATE REPROMULGATION MESSAGES.	J1.5I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
DO NOT ORIGINATE REPROM- ULGATION MESSAGES	0	
REPROMULGATION MESSAGES MAY BE ORIGINATED	1	

DFI	NAME	DEFINITION
1779	INITIAL ENTRY INDICATOR	INDICATES WHETHER OR NOT A TERMINAL SHALL TRANSMIT J0.0 MESSAGES.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 INITIAL ENTRY INDICATOR [1 BIT] (IE IND)	INDICATES WHETHER OR NOT A TERMINAL SHALL TRANSMIT J0.0 MESSAGES.	J1.5I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
TRANSMIT J0.0 MESSAGES	0	
DO NOT TRANSMIT J0.0 MESSAGES	1	

DFI NAME DEFINITION
1780 COMMUNICANT STATUS UPDATE INDICATES THE NUMBER OF CONNECTIVITY QUALITIES OF ITS DIRECT
INDICATOR COMMUNICANTS THAT A TERMINAL REPORTS IN SUCCESSION.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 COMMUNICANT STATUS UPDATE INDICATOR [2 BIT] (CS UI)	INDICATES THE NUMBER OF CONNECTIVITY QUALITIES OF ITS DIRECT COMMUNICANTS THAT A TERMINAL REPORTS IN SUCCESSION.	J1.5E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
64 COMMUNICANTS	1	INDICATES THAT THE TERMINAL REPORTS UP TO 64 CONNECTIVITY QUALITIES OF DIRECT COMMUNICANTS IN SUCCESSION.
128 COMMUNICANTS	2	INDICATES THAT THE TERMINAL REPORTS UP TO 128 CONNECTIVITY QUALITIES OF ITS DIRECT COMMUNICANTS IN SUCCESSION.
UNDEFINED	3	

B-823

MIL-STD-6016B
APPENDIX B

DFI NAME DEFINITION
1781 INDEX NUMBER A NUMBER ASSIGNED TO IDENTIFY AN ENTITY.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 INDEX NUMBER, SET [8 BIT] (INSET)	SPECIFIES THE INDEX NUMBER OF THE SET OF INITIALIZATION PARAMETERS TO WHICH THE ACTION CODE APPLIES.	J0.3C2
002 INDEX NUMBER, NEW SET [8 BIT] (NEWSET)	SPECIFIES THE NEW INDEX NUMBER IN CASE OF SET CHANGE ORDER.	J0.3C2

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-002 -----		
NO STATEMENT	0	
NUMERIC	1 THROUGH 255	

DFI	NAME	DEFINITION
1782	PARTICIPANT INDEX NUMBER	A NUMBER ASSIGNED TO A JU BY THE NETWORK CONTROL UNIT FOR THE PURPOSE OF ORDERING COMMUNICANTS.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 PARTICIPANT INDEX NUMBER [8 BIT]	A NUMBER ASSIGNED TO A JU BY THE NETWORK CONTROL UNIT FOR THE PURPOSE OF ORDERING COMMUNICANTS.	J1.5E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
PARTICIPANT INDEX NUMBER	1 THROUGH 255	

DFI	NAME	DEFINITION
1783	ALLOCATED PG INDEX NUMBER	INDICATES THE PG INDEX ON WHICH THE ROUTE IS TO BE ESTABLISHED.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 ALLOCATED PG INDEX NUMBER [9 BIT]	INDICATES THE PG INDEX ON WHICH THE REPROG ROUTE IS TO BE ESTABLISHED.	J1.2I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
NUMERIC	1 THROUGH 511	

DFI	NAME	DEFINITION
1784	ALLOCATED ROUTE NUMBER	INDICATES THE NUMBER ON WHICH THE ROUTE IS TO BE ESTABLISHED.
DATA STANDARD USAGE: Link 16		STATUS:
DUI NAME	EXPLANATION	APPLICABILITY
001 ROUTE NUMBER, RELAY [4 BIT] (RN REL)	INDICATES THE NUMBER ON WHICH THE REPROM ROUTE IS TO BE ESTABLISHED.	J1.2I
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
NUMERIC	1 THROUGH 15	

DFI NAME DEFINITION
1786 NET CONTROL STATION STATUS

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 OWN NET CONTROL STATION STATUS [2 BIT] (NCS STS)	INDICATES THE OPERATIONAL STATUS OF A TERMINAL'S NET CONTROL STATION.	J1.4I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
MESSAGES RECEIVED	1	THE TERMINAL HAS RECEIVED MESSAGES FROM ITS CONTROLLING NET CONTROL STATION WITHIN THE LAST TWO (1-5, 1) MINUTES.
NO MESSAGES RECEIVED	2	THE TERMINAL HAS NOT RECEIVED MESSAGES FROM ITS CONTROLLING NET CONTROL STATION WITHIN THE LAST TWO (1-5, 1) MINUTES.
UNDEFINED	3	

B-828

MIL-STD-6016B

DFI NAME DEFINITION
1787 RESPONSE TIME THE RESPONSE TIME IN SECONDS REQUIRED FOR MESSAGES TRANSMITTED
IN THE REFERENCED PARTICIPATION GROUP.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 RESPONSE TIME [9 BIT]	THE RESPONSE TIME IN SECONDS RE- QUIRED FOR MESSAGES TRANS- MITTED IN THE REFERENCED PARTICIPATION GROUP.	J1.6E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
1 THROUGH 511 SECONDS	1 THROUGH 511	IN ONE SECOND INCREMENTS.

DFI	NAME	DEFINITION
1788	ASSIGN/DEASSIGN INDICATOR	INDICATES THE TYPE OF NEEDLINE PARTICIPATION GROUP ASSIGNMENT BEING MADE.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 ASSIGN/DEASSIGN INDICATOR [2 BIT] (A/D IND)	INDICATES THE TYPE OF NEEDLINE PARTICIPATION GROUP ASSIGNMENT BEING MADE.	J1.6E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NEW ASSIGNMENT	0	
AN ADDITION TO A PREVIOUS ASSIGNMENT	1	
A SUBTRACTION FROM A PREVIOUS ASSIGNMENT	2	
A COMPLETE DELETION OF A PREVIOUS ASSIGNMENT(S)	3	

B-831

STATUS:

APPENDIX B

MIL-STD-6016B

DFI	NAME	DEFINITION
1790	NEEDLINE PG STATUS AMPLIFY	INDICATES THE OPERATIONAL STATUS OF THE ASSOCIATED NET STATUS NEEDLINE PARTICIPATION GROUP.

DATA STANDARD USAGE: Link 16	STATUS:
------------------------------	---------

DUI NAME	EXPLANATION	APPLICABILITY
001 NEEDLINE PARTICIPATION GROUP STATUS AMPLIFY, 1 [3 BIT] (NPG SA1)	INDICATES THE OPERATIONAL STATUS OF THE ASSOCIATED NET STATUS NEEDLINE PG.	J0.6C2
002 NEEDLINE PARTICIPATION GROUP STATUS AMPLIFY, 2 [3 BIT] (NPG SA2)	INDICATES THE OPERATIONAL STATUS OF THE ASSOCIATED NET STATUS NEEDLINE PG.	J0.6C2

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001 AND 002 -----		
NO STATEMENT	0	
NO FAILURE	1	INDICATES NO FAILURE OF PATHS HAS OCCURRED ON THE ASSOCIATED NET STATUS NEEDLINE PG.
DIRECTED ZERO PATH FAILURE	2	INDICATES A FAILURE OF A DIRECTED ZERO PATH HAS OCCURRED ON THE ASSOCIATED NET STATUS NEEDLINE PG.
DIRECTED ONE PATH FAILURE	3	INDICATES A FAILURE OF A DIRECTED ONE PATH HAS OCCURRED ON THE ASSOCIATED NET STATUS NEEDLINE PG.
NONDIRECTED PATH FAILURE	4	INDICATES A FAILURE OF A NONDIRECTED PATH HAS OCCURRED ON THE ASSOCIATED NET STATUS NEEDLINE PG.
UNDEFINED	5 THROUGH 7	

DFI NAME DEFINITION
1791 TEST DURATION COUNT INDICATES THE FINAL VALUE REACHED IN THE COUNT DURING
SEQUENTIAL HYPOTHESIS TEST AT THE TIME THE FAILURE DECISION IS
MADE.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 TEST DURATION COUNT, 1 [8 BIT]	INDICATES THE FINAL VALUE REACHED IN THE COUNT DURING SEQUENTIAL HYPOTHESIS TEST AT THE TIME THE FAILURE DECISION IS MADE.	J0.6C2
002 TEST DURATION COUNT, 2 [8 BIT]	INDICATES THE FINAL VALUE REACHED IN THE COUNT DURING SEQUENTIAL HYPOTHESIS TEST AT THE TIME THE FAILURE DECISION IS MADE.	J0.6C2

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001 AND 002 -----

SAFETY: EQUIPMENT MAY BE OPERATED IF
ESSENTIAL TO SAFE CONDUCT OF
OPERATIONS.

EQUIPMENT MAY BE OPERATED IN ACTIVE
MODE.

ESSENTIAL MISSIONS: MINIMUM
RADIATION IS TO BE USED INVOLVING
THE RADIATION OF ELECTROMAGNETIC
AND ACOUSTIC EQUIPMENT ONLY TO THE
LIMITED DEGREE AND FOR THE MINIMUM
TIME REQUIRED TO ACCOMPLISH A
SPECIFIC MISSION OR TASK.

GUARD: DESIGNATED UNIT(S) IS/ARE TO
OPERATE EQUIPMENT OR MAINTAIN
GUARD ON DESIGNATED CIRCUITS ON
BEHALF OF OTHER UNITS (IFF GUARDS
KEEP PARENT RADARS SILENT).

HELICOPTER OPERATIONS: ESSENTIAL
OPERATIONS ARE AUTHORIZED BY UNITS
DIRECTLY INVOLVED IN THE DIRECTION
OF HELICOPTERS.

LAUNCHING AND LANDING AIRCRAFT:
ESSENTIAL OPERATION IS AUTHORIZED
WHEN LAUNCHING AND LANDING
AIRCRAFT.

OPERATION IS DIRECTED: MUST BE
OPERATED IN THE ACTIVE MODE. WILL
BE USED TO SIMULATE THE TRAFFIC
NORMALLY ASSOCIATED WITH THE
CIRCUITS.

SILENCE: NO EMISSIONS ARE TO BE MADE

DFI NAME

DFI NAME
1819 FREQUENCY/FREQUENCY RANGE
INDICATOR

DEFINITION
THIS FIELD IS USED TO INDICATE WHETHER THE MESSAGE IS
DESCRIBING A SINGLE FREQUENCY OR A FREQUENCY RANGE.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
001 FREQUENCY/FREQUENCY RANGE INDICATOR [1 BIT] (F/R IND)	FREQUENCY/FREQUENCY RANGE INDICATOR FIELD IS USED WITH THE FOLLOWING FIELDS TO INDICATE THAT A FREQUEN- CY OR A FREQUENCY RANGE IS BEING DESCRIBED: FREQUENCY MULTI- PLIER, 1; FREQUENCY, 1; FREQUENCY MULTIPLIER, 2; FREQUENCY, 2.	J3.7C4	J14.0E0	J14.2C4

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
FREQUENCY	0	THE FREQUENCY, 1 FIELD AND THE FREQUENCY MULTIPLIER, 1 FIELD SHOULD BE INTERPRETED TO DETERMINE THE SINGLE FREQUENCY BEING TRANSMITTED IN THIS MESSAGE. THE FREQUENCY, 2 FIELD AND THE FREQUENCY MULTIPLIER, 2 FIELD SHOULD BE 0SET TO NO STATEMENT AND NOT BE INTERPRETED.
FREQUENCY RANGE	1	THE FREQUENCY AND FREQUENCY MULTIPLIER FIELDS SHOULD BE INTERPRETED TO DETERMINE THE UPPER AND LOWER LIMITS OF THE FREQUENCY RANGE BEING TRANSMITTED IN THIS MESSAGE.

DFI NAME
1820 FREQUENCY SCALE INDICATOR

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY		
003 FREQUENCY MULTIPLIER, 1 [4 BIT] (FRQ ML1)	EXPRESSED AS A POWER OF TEN. THIS FIELD IS USED AS A MULTIPLIER TO DETERMINE THE FREQUENCY, 1.	J3.7C4	J14.0E0	J14.2C4
004 FREQUENCY MULTIPLIER, 2 [4 BIT] (FRQ ML2)	EXPRESSED AS A POWER OF TEN. THIS FIELD IS USED AS A MULTIPLIER TO DETERMINE THE FREQUENCY, 2.	J3.7C4	J14.0E0	J14.2C4

DFI NAME DEFINITION
1821 WARTIME RESERVE MODE INDICATOR INDICATES THAT AN EMITTER IS OPERATING IN ITS NORMAL OPERATING
MODE OR IN ITS WARTIME RESERVE MODE.

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 WARTIME RESERVE MODE INDICATOR [1 BIT] (WTR MDE)	WARTIME RESERVE MODE INDICATOR IS TO BE USED WITH THE EMITTER NUMBER FIELD TO INDICATE WHICH MODE THE EMITTER IS OPERATING IN.	J3.7C3 J14.0C3 J14.2C3

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NORMAL OPERATIONS	0	INDICATES THE EMITTER IS FUNCTIONING IN ITS NORMAL OPERATING MODE.
WARTIME RESERVE MODE	1	INDICATES THE EMITTER IS FUNCTIONING IN ITS WARTIME RESERVE MODE. WARTIME RESERVE MODE IS: AN INTENTIONAL CHANGE IN OBSERVABLE ELECTRO-MAGNETIC EMITTER PARAMETER OR OPERATIONAL PROCEDURE INTENDED TO REDUCE THE EFFECTIVENESS OF EW EQUIPMENT OR OTHER DETECTION, CLASSIFICATION, AND SUPPORT ACTIVITIES OF OPPOSING FORCES. THESE MODES ARE DELIBERATELY HELD IN RESERVE FOR WARTIME EMERGENCY USE AND ARE SELDOM, IF EVER, INTERCEPTED OR OBSERVED PRIOR TO THE EMERGENCY. ALSO CALLED WARM.

DFI NAME
1849 MODULATION CODE

DEFINITION
INDICATES THE TYPE OF SIGNAL MODULATION.

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 MODULATION CODE [4 BIT] (MOD COD)	INDICATES THE TYPE OF SIGNAL MODULATION.	J14.0C3 J14.2C3
DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
AMPLITUDE MODULATED	1	INFORMATION IS ADDED TO A CARRIER FREQUENCY BY VARYING THE AMPLITUDE OF THE RF ENERGY.
PULSED	2	RF ENERGY IS TURNED ON AND OFF TO PRODUCE A SERIES OF RF ENERGY PULSES.
CONTINUOUS WAVE	3	SINE WAVE RF ENERGY THAT VARIES OVER A NARROW RANGE OF AMPLITUDE OR FREQUENCIES.
PULSE MODULATED	4	RF ENERGY IS TURNED ON AND OFF AT DISCRETE INTERVALS TO PRODUCE A SERIES OF PULSES WITH DETERMINABLE PULSE AMPLITUDE, PULSE REPETITION INTERVAL, AND PULSE WIDTH.
FREQUENCY MODULATED	5	INFORMATION IS ADDED TO A CARRIER WAVE BY VARYING THE CARRIER'S CENTER FREQUENCY.
PHASE MODULATED	6	THE INFORMATION WAVE IS ADDED TO THE CARRIER FREQUENCY BY CHANGING THE PHASE RELATIONSHIP WITHIN THE CARRIER SINE WAVE.
PULSE STAGGER	7	THE PULSE REPETITION INTERVAL OF A PULSE MODULATED SIGNAL CHANGES AT EACH OCCURRENCE OF THE MAIN-BANG OR SYNC PULSE IN DISCRETE STEPS.
PULSE DOPPLER	8	PULSE MODULATED SIGNALS WITH A HIGH PRF ARE USED IN PRECISION RADAR APPLICATIONS. THE RADAR TARGET'S VELOCITY IS DETERMINED BY MEASURING CHANGES IN THE CENTER FREQUENCY OF THE ECHO PULSE WITH RELATION TO THE

APPENDIX B

DFI NAME
1849 MODULATION CODE

DATA ITEM (CONTINUED) (CONTINUED)	BIT CODE	EXPLANATION
NOISE JAMMING	9	TRANSMITTED PULSE CENTER FREQUENCY. THE PULSES ARE USED TO DETERMINE TARGET RANGE. AN AM OR FM SIGNAL MODULATED WITH NOISE THAT IS USED TO REDUCE THE EFFECTIVENESS OF SIGNALS OPERATING IN THE SAME FREQUENCY RANGE AS THE NOISE SIGNAL.
CODE MODULATION PULSE	10	SEQUENCES OF PULSES USED TO CONVEY INFORMATION EITHER IN THE FORM OF PULSE AMPLITUDE, PULSE WIDTH, PULSE GROUP, OR PULSE POSITION RELATIONSHIPS. MODULATION ON TOP OF THE PULSES USING FM, AM, OR PHASE MODULATION TECHNIQUES MAY ADD TO THE INFORMATION CONTENT OF PULSE MODULATION SIGNALS.
TIME DIVISION	11	ALLOCATION OF SIGNAL FUNCTION IN RELATIONSHIP TO THE START TIME OF THE SIGNAL INFORMATION CYCLE PROVIDES A DIVISION OF INFORMATION TRANSMISSION TIME THAT ALLOWS DIFFERENT INFORMATION SOURCES TO SHARE A SINGLE RF CARRIER.
UNDETERMINED UNDEFINED	12 13 THROUGH 15	

DFI	NAME	DEFINITION
1850	CALLSIGN	REPORTS THE OBSERVED OR PUBLISHED CALLSIGN (ATC, AMC).

DUI NAME	EXPLANATION	APPLICABILITY
001 RECEIVE COUNT, OWN [3 BIT]	THE NUMBER OF TSR PARTICIPANTS THE ORIGINATING JU HAS RECEIVED DEMAND DATA FROM IN THIS REALLOCATION POOL.	J0.7I
002 RECEIVE COUNT, A [3 BIT]	THE NUMBER OF TSR PARTICIPANTS THE REPORTED JU HAS RECEIVED DEMAND DATA FROM IN THIS REALLOCATION POOL.	J0.7I
003 RECEIVE COUNT, B [3 BIT]	THE NUMBER OF TSR PARTICIPANTS THE REPORTED JU HAS RECEIVED DEMAND DATA FROM IN THIS REALLOCATION POOL.	J0.7E0
004 RECEIVE COUNT, C [3 BIT]	THE NUMBER OF TSR PARTICIPANTS THE REPORTED JU HAS RECEIVED DEMAND DATA FROM IN THIS REALLOCATION POOL.	J0.7E0
005 RECEIVE COUNT, D [3 BIT]	THE NUMBER OF TSR PARTICIPANTS THE REPORTED JU HAS RECEIVED DEMAND DATA FROM IN THIS REALLOCATION POOL.	J0.7E0
006 RECEIVE COUNT, E [3 BIT]	THE NUMBER OF TSR PARTICIPANTS THE REPORTED JU HAS RECEIVED DEMAND DATA FROM IN THIS REALLOCATION POOL.	J0.7E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS FOR 001-006 -----		
0 DEMANDS RECEIVED	0	
1 DEMAND RECEIVED	1	
2 DEMANDS RECEIVED	2	
3 DEMANDS RECEIVED	3	
4-7 DEMANDS RECEIVED	4	

DFI NAME
1966 RECEIVE COUNT

DATA ITEM (CONTINUED)	BIT CODE	EXPLANATION
8-15 DEMANDS RECEIVED	5	
16-31 DEMANDS RECEIVED	6	
32 OR MORE DEMANDS RECEIVED	7	

DFI NAME
1973 LAUNCH CAPABILITY

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 LAUNCH CAPABILITY [2 BIT] (LCH CAP)	INDICATES WHETHER A SUBMARINE MUST BE SURFACED TO LAUNCH ITS MISSILES.	J3.4I

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUI 001 -----		
NO STATEMENT	0	
MAY LAUNCH MISSILE WHILE SUBMERGED	1	
MUST BE SURFACED TO LAUNCH MISSILE	2	
UNDEFINED	3	

DFI NAME DEFINITION
1976 HOP COUNT

DATA STANDARD USAGE: Link 16 STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 HOP COUNT, A [3 BIT]	A COUNT OF THE NUMBER OF TIMES THE DEMAND FROM THE ORIGINATOR (A) HAS BEEN REPEATED BY DIFFERENT JUS.	J0.7I
002 HOP COUNT, B [3 BIT]	A COUNT OF THE NUMBER OF TIMES THE DEMAND FROM THE ORIGINATOR (B) HAS BEEN REPEATED BY DIFFERENT JUS.	J0.7E0
003 HOP COUNT, C [3 BIT]	A COUNT OF THE NUMBER OF TIMES THE DEMAND FROM THE ORIGINATOR (C) HAS BEEN REPEATED BY DIFFERENT JUS.	J0.7E0
004 HOP COUNT, D [3 BIT]	A COUNT OF THE NUMBER OF TIMES THE DEMAND FROM THE ORIGINATOR (D) HAS BEEN REPEATED BY DIFFERENT JUS.	J0.7E0
005 HOP COUNT, E [3 BIT]	A COUNT OF THE NUMBER OF TIMES THE DEMAND FROM THE ORIGINATOR (E) HAS BEEN REPEATED BY DIFFERENT JUS.	J0.7E0

DATA ITEM	BIT CODE	EXPLANATION
----- FOR DUIS 001-005 -----		
NO HOPS	0	
1 HOP	1	
2 HOPS	2	
3 HOPS	3	
4 HOPS	4	
5 HOPS	5	
6 HOPS	6	
7 OR MORE HOPS	7	

APPENDIX B

DFI NAME
1986 TIME TAG

DEFINITION

DATA STANDARD USAGE: Link 16

STATUS:

DUI NAME	EXPLANATION	APPLICABILITY
001 TIME TAG, A [3 BIT]	THE NUMBER OF REALLOCATION PERIODS THAT HAVE BEGUN SINCE THE DEMAND INFORMATION WAS FIRST TRANSMITTED IN A J0.7I BY THE ORIGINATOR.	J0.7I
002 TIME TAG, B [3 BIT]	THE NUMBER OF REALLOCATION PERIODS THAT HAVE BEGUN SINCE THE DEMAND INFORMATION WAS FIRST TRANSMITTED IN A J0.7I BY THE ORIGINATOR.	J0.7E0
003 TIME TAG, C [3 BIT]	THE NUMBER OF REALLOCATION PERIODS THAT HAVE BEGUN SINCE THE DEMAND INFORMATION WAS FIRST TRANSMITTED IN A J0.7I BY THE ORIGINATOR.	J0.7E0
004 TIME TAG, D [3 BIT]	THE NUMBER OF REALLOCATION PERIODS THAT HAVE BEGUN SINCE THE DEMAND INFORMATION WAS FIRST TRANSMITTED IN A J0.7I BY THE ORIGINATOR.	J0.7E0
005 TIME TAG, E [3 BIT]	THE NUMBER OF REALLOCATION PERIODS THAT HAVE BEGUN SINCE THE DEMAND INFORMATION WAS FIRST TRANSMITTED IN A J0.7I BY THE ORIGINATOR.	J0.7E0

DATA ITEM

BIT CODE

EXPLANATION

----- FOR DUIS 001-005 -----

NUMERIC

0 THROUGH 7

THE NUMBER OF REALLOCATION PERIODS.

APPENDIX C

C.1 SCOPE

This appendix specifies the rules, message translation requirements, and data element translations required to exchange data between tactical data systems employing Link 16 and tactical data systems employing Link 11/11B. This appendix is a mandatory part of this standard. The information contained herein is intended for compliance.

C.2 APPLICABLE DOCUMENTS

C.2.1 GENERAL

The documents listed in this section are specified in sections C.4 and C.5 of this appendix. This section does not include documents cited in other sections of this standard, recommended for additional information, or used for examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements documents cited in sections C.4 and C.5 of this appendix, whether or not they are listed.

C.2.2 GOVERNMENT DOCUMENTS

C.2.2.1 SPECIFICATIONS, STANDARDS, AND HANDBOOKS

The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the current issues of these documents are listed in the Department of Defense Index of Specifications and Standards (DoDISS).

STANDARDS

DEPARTMENT OF DEFENSE

MIL-STD-6011C - Tactical Data Link (TDL) 11/11B Message
Standard

APPENDIX C

(Unless otherwise indicated, copies of the above specifications, standards, and handbooks are available from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

APPENDIX C

C.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

MIL-STD-6016B

APPENDIX C

C.4 GENERAL REQUIREMENTS

C.4.1 DATA FORWARDING RULES

The Link 16 interface is intended to provide improved information distribution, relative navigation, and identification capability in support of inter- and intra-Service/Agency tactical command and control and mission execution functions. These functions will also be supported by information exchange via other digital data links, e.g., Link 11 and 11B. For effective accomplishment of these functions, there must be an unrestricted flow of information between the Tactical Data Systems (TDSs) serviced by a network of digital data links. This requires that selected Command and Control (C²) TDSs interfacing with multiple links provide for transferring data between the dissimilar links without altering the intent of the information exchanged.

The purpose of MIL-STD-6016 Appendix C is to specify the rules, protocols, and translations required between J-Series and M-Series messages. Data forwarding is the process of receiving data on one digital data link and outputting the data, using proper format and link protocols, to another type of digital data link(s). In the process, a message(s) received on one link is translated to an appropriate message(s) on another link. Data forwarding is accomplished by the selected forwarding units(s) simultaneously participating on more than one type of data link. The data that is forwarded is based on the data received and is not dependent upon the local system data of the data forwarding unit or its implementation of the received message or the forwarded message. Those data elements applicable within the messages are translated to the appropriate data elements in the corresponding messages. Within the data forwarding process, data management will be minimized. All systems that forward data must adhere to appendix C. In the course of implementing Link 16, it is recognized that some systems may use internal system translations (i.e., Link 16 to Link 11B) and some systems may transmit originated track data on more than one data link at the same time. Functionally, such systems are not data forwarders; however, these systems will adhere to the guidance of section C.5.2 to ensure that the closest possible relationship of data elements and data element interpretation will be maintained among all users of the data.

APPENDIX C

C.4.1.1 FORWARDING REQUIREMENTS

A forwarding requirement exists between Link 16 and other links. This appendix covers only the forwarding between Link 16 (fixed word format) and inter-Service data links (Link 11/11B). Data forwarding shall be accomplished by the selected units simultaneously participating on more than one TDL.

C.4.1.2 FORWARDING CONSIDERATIONS

The Link 16 forwarding rules and procedures are designed to:

- a. Minimize the time delays inherent in the forwarding operation.
- b. Be used without any changes to existing digital data link protocols and message formats.
- c. Insure that data transmitted by the forwarding unit agree as closely as possible with the meaning of the data received for forwarding.

C.4.1.3 CONCURRENT OPERATIONS

Concurrent operations is the process of communicating on two, or more, digital data links at the same time as a participant. The concurrent operating unit exchanges all information held in its local database, but remote information is not forwarded. Protocols of each link are adhered to by the concurrent operating unit. The local database of a concurrent operating unit is the normal assimilation of data by that unit and includes local sensor data, local operator inputs, and data received and accepted into the local database from a data link, e.g., ID or IFF/SIF data.

C.4.2 DATA FORWARDING PROCESS

Factors to be considered in the data forwarding process are message translation and data element translation.

APPENDIX C

C.4.2.1 MESSAGE TRANSLATION

Message translation is the process by which a message or sequence of messages received on one data link is transformed to the appropriate message or message sequence required for transmission on another data link.

There may not be a one-for-one translation of the messages used on the data links. For example, multiple messages received on one link may translate into a single message to be transmitted on the second link, or vice versa. The translation of messages may vary based on message content. Therefore, message translation standards include rules for selecting the message(s) to which a received message or group of messages is to be translated based on the type of message(s) received and, in some cases, on the content of the message(s). A forwarder shall process the complete received message or message sequence in accordance with the appropriate translation tree, prior to taking any forwarding action. This process will eliminate the possibility of the forwarder originating unnecessary duplicate messages as each 'Required Action' of the Test Node Diagram is being considered. Section C.5.1 of this appendix provides the complete set of translations for those messages to be forwarded between Link 16 and Link 11/11B.

C.4.2.2 DATA ELEMENT TRANSLATION

Data element translation is the process by which a data element (also commonly referred to as a field) or multiple data elements received on one data link are transformed to the appropriate data element(s) required for transmission on another data link. This translation is done by equating data elements, converting data elements, and using special considerations for which equivalence and conversion do not apply. Section C.5.2 of this appendix provides a complete set of data element translations for those data elements to be forwarded between Link 16 and Link 11/11B.

C.4.2.2.1 DATA ELEMENT EQUIVALENCE

Data element equating is the process of moving, without change, a data item value of a data element from a received message on one link to a data item

APPENDIX C

value of a data element in a different message format for transmission on another link.

C.4.2.2.2 DATA ELEMENT CONVERSION

Data element conversion is the process of altering the data item value of a data element from a received message on one link to a data item value of a data element in a different message format for transmission on another link. This process is employed when some degree of data item value conversion by a forwarding unit is required. For example, data element conversion may alter the granularity, transform coordinates, or change velocity to course and speed. In some cases multiple data elements from one data link will relate to a single data element on another data link, e.g., M-Series scale factors.

C.4.2.2.3 SPECIAL CONSIDERATIONS

There are data elements for which equivalence and conversion do not apply, and these require special considerations, such as (1) disregarding a data element that is not applicable to the message format that will be transmitted, (2) generating data elements not available in the received message but required for the format of the message to be transmitted, (3) retaining and recalling from the forwarding system's database information that is required by differing message formats on the varying links, e.g., data source.

C.4.3 GENERAL FORWARDING RULES

These forwarding rules are established to standardize data forwarding between Link 16 and Link 11/11B:

a. When data link networks are established, there shall be only one communication path in use at a time for data being forwarded to prevent communication loops. A communication path is a combination of digital data links and interconnecting nodes that provide a path for information exchange.

b. The Forwarding JTIDS Unit (FJU) must be provided sufficient time slots by the network manager so that all required messages from Link 11/11B

APPENDIX C

can be forwarded onto Link 16. Also, the FJU must be a participant on those participation groups for which messages are being forwarded.

c. All translatable messages from the Link 16 participation groups on which the FJU is a participant shall be forwarded onto Link 11/11B, as required by this appendix. The FJU shall discard messages that cannot be forwarded.

d. All translatable messages from Link 11/11B shall be forwarded onto the Link 16 participation groups on which the FJU is a participant, as required by this appendix. The FJU shall discard messages that cannot be forwarded.

e. The FJU shall use the same transmit rules to forward a translated message that it would use to transmit a locally originated message of the same type. The FJU shall resolve any differences in the transmit procedures of the various types of links that it interfaces with, as specified in section C.5.1. For example, a message may be transmitted N times at M-second intervals on Link 11/11B and the corresponding message may be transmitted only once on Link 16. Therefore, the forwarder must have provisions for identifying and discarding the retransmission of the message from Link 11/11B, since the FJU must transmit the corresponding message only once on Link 16. Conversely, the FJU must have provisions for identifying when to redundantly retransmit a previously received message from Link 16 onto Link 11/11B. The message translation trees in section C.5.1 specify forwarding transmit rules.

f. The FJU shall inhibit the forwarding of received data when:

(1) The data are received from, or addressed to, a unit not currently held as an active interfacing unit. There are two exceptions to this rule:

(a) Reestablishing active status of the Interface Unit (before receipt of data).

MIL-STD-6016B

APPENDIX C

(b) If the addressed message is either a J9.0 with Command set to value 0-8 or 23, or M.15 with Command set to value 0-8, the message may be forwarded as a system option.

(2) The coordinated filter criteria for the appropriate TDL prohibits forwarding the data.

(3) The received message is technically illegal or invalid as defined in MIL-STD-6016 and/or MIL-STD-6011.

(4) A periodically updated message is superseded by a second message before the first message can be forwarded. The new data shall override the stale data and only the most current message shall be forwarded.

g. The FJU shall have the capability to filter exercise and Special Processing Indicator (SPI) data. Emergency and Force Tell track alerts shall override exercise and SPI filters. Forwarding of the following information shall not be inhibited by any other filter that is under operator control:

(1) Data on Command and Control Interface Units (C² IUs) and on track numbers less than 00200 (octal).

(2) Information on any track or nonCommand and Control Interface Unit (nonC² IU) with an Emergency or Force Tell indicator set.

(3) Commands.

(4) Engagement Status.

(5) Handovers.

(6) Controlling Unit Reports.

(7) Pairings.

(8) Track Management.

APPENDIX C

h. The FJU shall forward an addressed message only on the interfacing link upon which the message addressee is located. All other messages, including messages containing a collective address, shall be forwarded on all interfacing links except the link upon which the message was received.

i. When addressed messages require receipt/compliance, the FJU shall transmit a machine receipt or appropriate CANTPRO to the message originator. Machine receipts (R/C = 2) shall not be forwarded. The message translation trees in section C.5.1 specify the response(s) for automatic CANTPRO responses.

j. The FJU may extrapolate positional data for real-time tracks and units to the time of transmission.

C.4.4 ACTIVE/INACTIVE STATUS

An FJU shall maintain the active status of each Command and Control JTIDS Unit (C² JU) on Link 16 and of each Participating Unit (PU) and/or Reporting Unit (RU) on Link 11/11B. Only data from active sources shall be forwarded. Responses to Data Update Request are found in the message translation trees in section C.5.1.

C.4.4.1 LINK 11 TO LINK 16 ACTIVE UNIT INDICATION

The active status of a Link 11 unit or of a unit received via Link 11 is determined by the receipt of a valid M.1 or M.1/M.5 message sequence. In some cases involving the Special Processing or the Reference/Position Indicators, two separate M.1 sequences for the unit may be received during a single Link 11 transmit opportunity. (Two M.1 messages will form each M.1 message sequence.) An FJU shall transmit a J2.0 message on a unit when an M.1 sequence is received from Link 11. In cases where two separate M.1 message sequences are received during a single transmit opportunity, the FJU may transmit a single J2.0 message or a separate J2.0 message for each M.1 message sequence.

APPENDIX C

C.4.4.2 LINK 11B TO LINK 16 ACTIVE UNIT INDICATION

The active status of a directly tied Link 11B unit is determined by the receipt of a valid M.1 or M.1/M.9A(AC=0)/M.5 message sequence. (Two M.1 messages will form each M.1 message sequence.) The continued active status of the directly tied Link 11B unit is determined by the receipt of periodic M.0 messages. The active status of an indirectly tied unit on Link 11B is determined by receipt of a valid M.9A(AC=0)/M.5 message sequence. An FJU shall transmit a J2.0 message on a unit when an M.1, M.1/M.9A(AC=0)/M.5, or M.9A(AC=0)/M.5 message sequence is received on Link 11B. The unit may remain active indefinitely, with no further M.1 or M.5 messages being received. The FJU shall continue to transmit J2.0 messages at the periodic rate specified for Link 16 as long as the unit remains active.

C.4.4.3 LINK 16 TO LINK 11 ACTIVE UNIT INDICATION

The active status of a Link 16 unit is determined by the receipt of a J2 series message with the Network Participation Status Indicator set to a value of 1, 4, or 5. The active status of a non-Link 16 unit, forwarded through Link 16, is determined by the receipt of a J2.0 message. An FJU shall transmit an M.1 message sequence (with R/P Indicator = 1) in each FJU Link 11 transmit opportunity for each active forwarded C² unit held. An M.5 message will be sent as a part of the M.1 message sequence initially and at the appropriate rate thereafter. If the C² unit position or other data changes, the M.1/M.5 message sequence shall be sent at the next FJU Link 11 transmit opportunity. Multiple M.1 message sequences for the same C² unit may be required during a single FJU Link 11 transmit opportunity to forward data with different Special Processing requirements. See paragraph C.4.7.1 for data forwarding of active nonC² units.

C.4.4.4 LINK 16 TO LINK 11B ACTIVE UNIT INDICATION

The active status of a Link 16 unit is determined by the receipt of an appropriate J2 series message with the Network Participation Status Indicator set to a value of 1, 4, or 5. The active status of a nonLink 16 unit, forwarded through Link 16, is determined by the receipt of a J2.0 message. An FJU shall transmit an M.9A(AC=0)/M.5 message sequence upon receipt of any

APPENDIX C

J2 series message that establishes a C² unit as being active. An M.5 message shall be transmitted if the C² unit position or other forwarded data change in the J2 series message. See paragraph C.4.7.1 for data forwarding of active nonC² units. Except as indicated above, the redundant J2 series message shall not be forwarded on Link 11B.

C.4.4.5 LINK 11 TO LINK 16 INACTIVE UNIT INDICATION

When a valid M.1 message sequence has not been received from a unit on Link 11 within the past 60 seconds, the unit shall be declared inactive. The FJU shall transmit a J7.0 Drop Track Report and cease transmitting J2.0 messages for a unit that becomes inactive.

C.4.4.6 LINK 11B TO LINK 16 INACTIVE UNIT INDICATION

Units shall be declared inactive on Link 11B if:

- a. A valid M.0 message has not been received from a directly tied unit in the past 60 seconds.
- b. A drop track is received from a Forwarding Reporting Unit (FRU) on an indirectly tied unit that the FRU had been forwarding.
- c. An FRU becomes inactive. All units forwarded by that FRU shall be declared inactive concurrently.

The FJU shall transmit a J7.0 Drop Track Report and cease transmitting J2.0 messages for a unit that becomes inactive.

C.4.4.7 LINK 16 TO LINK 11/11B INACTIVE UNIT INDICATION

A unit shall be declared inactive on Link 16 if:

- a. A J2 series message is not received for 60 seconds.
- b. A J2 series message is received with the Network Participation Status Indicator (NPS IND) set to any value other than 1, 4, or 5.

APPENDIX C

The FJU shall transmit an M.9A(AC=4) Drop Track message and cease reporting data on a unit that becomes inactive on Link 16.

C.4.5 TDL UNIQUE FORWARDING RULES

Due to the differing methods of identifying data source and positional information on the different data links, unique protocols are required for each link.

C.4.5.1 FORWARDING OF DATA ON LINK 16

When forwarding data from Link 11/11B to Link 16, the FJU shall identify the source of all data. This is done by setting the Track Number, Source located in the header to the address of the unit being forwarded. All positional data on Link 16 is expressed in geodetic latitude and longitude.

C.4.5.2 FORWARDING OF DATA ON LINK 11

When forwarding data from Link 16 to Link 11, the FJU shall transmit all data for which a C² unit is the source following the M.1 or M.1/M.5 message sequence used to indicate that unit is an active participant. The M.1 message shall contain the PU/RU Address (Track Number, Source) of the unit whose data are being forwarded and the Delta Latitude/Delta Longitude, referenced from the Data Link Reference Point (DLRP), which reflect the System Coordinate Center (SCC) of the FJU. All positional data other than the M.1 is X-Y data referenced to the SCC of the FJU.

C.4.5.3 FORWARDING OF DATA ON LINK 11B

When forwarding data from Link 16 to Link 11B, the FJU establishes SCC with an M.1 to each directly tied Link 11B unit giving Delta Latitude/Delta Longitude from the DLRP. All positional data other than the M.1 is X-Y data referenced to the SCC of the FJU. When forwarding track reports the FJU shall transmit an initial sequence with the C² unit (whose data are being forwarded) indicated as the data source in an M.9A(AC=0) message. Following receipt of an acknowledgement from a directly tied Link 11B unit, updated track reports on the acknowledged track shall be forwarded without including

APPENDIX C

data source unless the source changes. Forwarding of other data which do not utilize the M.9A(AC=0) message to identify data source will be in accordance with the conventions of Link 11B.

C.4.6 DATA FORWARDING OF INFORMATION REQUIRING SPECIAL PROCESSING

Information that requires special processing may be forwarded only to those systems capable of handling that level of classification. An FJU shall adhere to all current constraints concerning the handling of data requiring special processing.

C.4.6.1 DATA FORWARDING OF INFORMATION REQUIRING SPECIAL PROCESSING TO LINK 11B

The special processing status of the information on a track shall be reflected by the SPI field in the M.9A(AC=0) message of an initial message sequence. If the SPI changes in a J3 series message, a new initial sequence shall be transmitted to promulgate the change.

C.4.6.2 DATA FORWARDING OF INFORMATION REQUIRING SPECIAL PROCESSING TO LINK 11

The special processing status of the information on a track forwarded onto Link 11 shall be reflected by the SPI in the M.1 messages preceding the track reports. If both the information requiring special processing and the information not requiring special processing are forwarded from the same JU, the information not requiring special processing shall be transmitted following M.1 messages with the SPI set to 0. The information requiring special processing shall then be transmitted following M.1 messages with the SPI set to 1. If the SPI changes in a J3 series message, the track report shall be transmitted behind the M.1 messages with the SPI set appropriately.

C.4.6.3 DATA FORWARDING OF INFORMATION REQUIRING SPECIAL PROCESSING TO LINK 16

The special processing status of information forwarded on Link 16 shall be reflected by the SPI in the appropriate J-Series message(s). If the special

APPENDIX C

processing status of the information received changes, the SPI in the corresponding J-Series message(s) shall be changed appropriately.

C.4.7 PRECISE PARTICIPANT LOCATION AND IDENTIFICATION DATA FORWARDING

Forwarding of Precise Participant Location and Identification (PPLI) message data promulgates the location and identification of all JTIDS/MIDS units. The forwarding of nonC² JU and C² JU PPLI data is explained in the following paragraphs.

C.4.7.1 NONC² JU DATA FORWARDING

NonC² JU PPLI messages indicating active network participation status are forwarded onto Link 11/11B as either a special point or surveillance track information, e.g., M.2 messages, with the source track number of the FJU indicated as having reporting responsibility (R²). Surveillance tracks shall have their Track Quality set to 7 in this case. If a nonC² JU is active and a Link 11/11B unit attempts to take R², the following rules shall apply:

- a. The FJU shall accept and acknowledge the Link 11/11B initial sequence and forward to all other Link 11/11B links.
- b. The FJU shall not forward the Link 11/11B initial sequences onto Link 16.
- c. Upon reception of next J2 series message, the FJU shall forward a new initial sequence to Link 11/11B and reassume R².

If no PPLI data have been received from the nonC² JU for 60 seconds, and no initial sequence has been received from Link 11/11B a Drop Track message shall be transmitted by the FJU on Link 11/11B. Also, if a PPLI message indicating that the nonC² JU is inactive has been received, a Drop Track message shall be transmitted by the FJU on Link 11/11B. The nonC² JU is then eligible for normal surveillance reporting responsibility rules. Upon receipt of a PPLI message indicating that the nonC² JU has returned to active status, the FJU again shall forward the surveillance messages on the nonC² JU,

APPENDIX C

with the track number of the FJU as the data source, and shall not forward Link 11/11B originated surveillance data on the track to Link 16.

C.4.7.2 C² JU DATA FORWARDING

C² JU PPLI messages indicating active network participation status from designated units shall be forwarded on Link 11/11B, as described in section C.5.1. If another PPLI message is not received within 60 seconds from the previous PPLI message or a PPLI message indicating inactive status is received, a Drop Track message shall be transmitted on Link 11/11B. As long as the C² JU is active, the FJU shall not allow a Link 11/11B unit to assume reporting responsibility of this unit in a surveillance message.

PPLI messages having source track number 00200 (octal) or greater, or exceed the maximum source capacity of the FJU, shall be forwarded as surveillance tracks in accordance with paragraph C.4.7.1. The data from these units shall be forwarded with a pseudo source track number address of 176 (octal). The FJU shall set the position of the pseudo source track number 176 (octal) to 10 data miles north of the DLRP. Addressed messages to or from these units and/or the pseudo source track number shall not be forwarded.

C.4.8 DATA FORWARDING MANAGEMENTC.4.8.1 SURVEILLANCE DATA FORWARDING

The forwarding of surveillance messages is specified in the message translation trees in section C.5.1. For various reasons two or more units may be reporting the same track to an FJU. The following criteria for forwarding shall be employed for all surveillance tracks that employ track quality:

- a. If an FJU is forwarding nonreal-time data on a track and real-time data are received on the track, then the real-time data shall be forwarded starting at the next transmission opportunity, and nonreal-time data shall be inhibited.

APPENDIX C

b. After a Drop Track message has been forwarded, data from each unit to subsequently report the track shall be forwarded at the next available transmit opportunity.

c. Data forwarding of surveillance messages from Link 16 to a Link 11/11B link is limited to tracks that are positioned within 511-3/4 miles of the FJU's SCC reported on that link.

C.4.8.2 FORWARDING CONTROLLING UNIT DATA

C.4.8.2.1 LINK 16 TO LINK 11/11B

The J10.5 Controlling Unit Report message shall be forwarded as an M.9A(AC=6) message. The M.9A(AC=6) Identity, Primary Identity Amplification and Identity Amplification fields shall be translated from the most current Identity, Platform, Platform Activity, Special Interest Indicator, and Exercise Indicator fields held in the FJU database in accordance with General Note 20 or 21. This rule is in accordance with paragraph C.4.2.2.3 (3), stating the requirement to retain and recall information from the FJUs database.

The J7.0 (ACT = 1) message, with Controlling Unit Indicator = 1, shall be forwarded as an M.9A(AC=6) message having Identity, Primary Identity Amplification and Identity Amplification as translated from the J7.0 message. In all other cases the J7.0 message will be forwarded as an M.9A message with the appropriate action code, regardless of source.

C.4.8.2.2 LINK 11/11B TO LINK 16

The Identity, Primary Identity Amplification and Identity Amplification in an M.9A(AC=6) message shall not be forwarded by the FJU.

The FJU shall set the Controlling Unit Indicator in a J7.0 message as appropriate to indicate whether the originator of an M.9A(AC=1 or 2) does or does not have control of the track.

APPENDIX C

C.4.8.3 FORWARDING IFF/SIF INFORMATIONC.4.8.3.1 FORWARDING IFF/SIF SURVEILLANCE INFORMATION

Identification Friend or Foe/Selective Identification Feature (IFF/SIF) information for Modes I, II, III, and IV is exchanged on both Link 11/11B and Link 16. The unit with R² for a track reports any available IFF/SIF information. The FJU forwards IFF/SIF information in a surveillance message or message sequence only when received from the R² unit.

C.4.8.3.2 FORWARDING IFF/SIF MANAGEMENT INFORMATION

IFF/SIF Management information (i.e., J7.5, M.9A(AC=9)) shall be forwarded as received. Information received in IFF/SIF Management messages, with the exception of IFF/SIF clear messages, shall not be used by the FJU to update IFF/SIF information stored for tracks that are being forwarded.

C.4.8.3.3 FORWARDING SPECIAL CODE INFORMATION

Special Code information shall be forwarded as received.

C.4.8.4 FORWARDING ADDRESSED MESSAGES HAVING RECEIPT/COMPLIANCE

Forwarding addressed Command, Handover, or EW Control/Coordination messages that involve Receipt/Compliance (R/C) requires special handling procedures by the FJU. The FJU inspects all addressed messages to ascertain if the addressee is a unit for which data are being forwarded. The FJU shall respond with a Machine Receipt (MR) to either Original Messages (OM) or to Reply Messages as if it were the addressee for all messages which will be forwarded. The FJU shall then forward the addressed message on the link on which the addressee is active. If the addressee is not active on any link and the addressed message is either a J9.0 with Command set to values 0-8 or 23, or M.15 with Command set to values 0-8, then the message may be discarded or forwarded as a system option. The FJU shall substitute data source indications appropriate to the link on which data are being forwarded. The FJU assumes responsibility for redundant transmissions if an MR is not received. When an MR or other reply in lieu of an MR is received by the FJU,

APPENDIX C

forwarding responsibility for that specific addressed message is complete. The FJU has no responsibility with respect to matching replies to an OM except when a reply is received in lieu of an MR. The FJU shall generate a CANTPRO (automatic CANTCO for EW Control/Coordination on Link 11/11B) response to the originator of an OM if the addressed unit is inactive or if the addressee fails to MR the forwarded message. If a list of inactive units for which the FJU has forwarding responsibilities is not maintained, the FJU shall not generate an MR, CANTPRO, or CANTCO response for inactive units. The transmission sequences vary depending upon the TDLs involved and whether the message is a Handover, Command or EW Control/Coordination message. Specific sequences for Command and Handover messages are provided in tables C.4.8-1 through C.4.8-8.

In order to ensure that commanders can be aware of commands originated by and addressed to other than the commander's own unit, an FJU may forward Command messages onto a link other than the one on which the addressee is active. This is an authorized exception to the actions required by test node condition 1 of tables C.5.1-J9.0 and C.5.1-M.15. The above R/C procedures (and those contained in paragraph 4.1.7 of MIL-STD-6016) are not applicable to such forwarded Commands. The JTIDS/MIDS terminal, however, will automatically notify the FJU (host) that a MR has not been received; the FJU (host), therefore, must ensure that a CANTPRO is not transmitted. The FJU must ensure that Commands are not redundantly forwarded to the same addressee via more than one forwarding unit, due to the R/C problems this would create.

Throughout these tables, the following apply:

- o The units are illustrated with the following addresses:
 - 10 = Link 11 PU being forwarded
 - 20 = the FJU
 - 30 = Link 16 JU being forwarded
 - 140 = Link 11B RU being forwarded
- o The tables are broken into 3 to 5 segments. The first segment is the forwarding and machine receipt for the original message. The next segment(s) provides the forwarding and machine receipt for

APPENDIX C

replies made by the originally addressed unit. The final segment(s) provides the CANTPRO actions required when the forwarding unit is unable to forward an original message. No CANTPRO responses are made when the FJU is unable to forward a reply message.

MIL-STD-6016B

APPENDIX C

THIS PAGE INTENTIONALLY LEFT BLANK

APPENDIX C

C.4.8.5 ELECTRONIC WARFARE DATA FORWARDING

The Link 16 EW data messages, J3.7 (EW Product Information) and J14.0 (EW Parametric Information), include many identical fields and are used for essentially the same purpose. The J14.0 has certain additional fields for reporting more detailed parametric information, equivalent to the M.6C and M.86C Link 11/11B messages. The primary difference between the messages is that the J14.0 is used to exchange a great deal of raw, unevaluated data on the Link 16 EW Network PG, whereas the J3.7 is used only to report selected evaluated data on the Surveillance Network PG. In order to prevent overloading Link 11/11B and still provide for forwarding of parametric data and variable routing of PU/RU data to the Link 16 Network when appropriate, FJUs must have operator selectable controls that allow selection of one of the modes of EW data forwarding that are described below. In any mode, all translatable J14.2 and M.6D messages shall be forwarded.

a. Link 16 to Link 11/11B:

(1) All: Forward J3.7 and J14.0 messages as prescribed in sections C.5.1 and C.5.2. In this mode, the FJU for the EW Network PG must, as a minimum, receive the Surveillance Network PG. The FJU shall not forward any J14.0 containing a Reference TN currently being reported on the Surveillance Network PG except that if the J14.0 includes a J14.0C4 word, an M.6C or M.6C/M.86C shall be forwarded. If a J14.0 is being forwarded and a J3.7 is subsequently received for that Reference TN, the FJU shall discontinue forwarding the J14.0, unless it includes the J14.0C4, in which case only M.6C or M.6C/M.86C messages shall be forwarded for the J14.0.

(2) Product: Forward only J3.7 messages. Do not forward J14.0 messages.

b. Link 11/11B to Link 16:

(1) All: Forward all J3.7 and J14.0 messages resulting from Link 11/11B messages, as prescribed in sections C.5.1 and C.5.2, on to the appropriate network. Simulated M.6 messages shall not be forwarded as J14.0 messages.

APPENDIX C

(2) Parametric: Forward only J14.0 messages resulting from Link 11/11B messages. Do not transmit J3.7 messages resulting from translation. In this mode, the Link 11/11B PU/RU data are integrated into the EW Network PG data. They are released to the Surveillance Network only after evaluation and selection by designated JUs, in the same manner as other J14.0 data. Simulated M.6 messages shall not be forwarded in this mode.

C.4.8.6 FORWARDING SIMULATED DATA

The protocols for the forwarding of simulated data are as follows:

C.4.8.6.1 LINK 16 TO LINK 11

Simulated data, including nonC² JU PPLI, track, point, bearing, fix or AOP data, shall be forwarded to Link 11 by transmitting an M.9A(AC=0) message with the Simulation Indicator set to value 1 (SI=1) preceding each simulated data report transmitted. The M.9A(AC=0, SI=1) is not acknowledged on Link 11. The M.9A(AC=0, SI=0) message is not transmitted on Link 11. If an M.9A(AC=5) Track Alert Report is required to precede a simulated data report, the M.9A(AC=0, SI=1) shall follow the M.9A(AC=5).

Simulated C² JUs' PPLIs shall be forwarded to Link 11 with the Simulation Indicator, 1 set to value 1 in the forwarded M.1 message.

C.4.8.6.2 LINK 16 TO LINK 11B

Simulated data shall be forwarded to Link 11B by setting SI=1 in the M.9A(AC=0) Data Source Reports required by normal Link 11B rules, complying with the normal Link 11B rules for transmission and acknowledgement of M.9A(AC=0) Data Source Reports. An FJU must retain the simulation status of all JUs, tracks, points, bearings, fixes, and AOPs being forwarded to Link 11B.

C.4.8.6.3 LINK 11/11B TO LINK 16

Simulated data are forwarded to Link 16 by setting the Simulation Indicator to value 1 (SI=1) in the Link 16 Indirect PPLI, track, point, bearing, fix,

APPENDIX C

or AOP reports. An FJU must retain the simulation status of all tracks, points, bearings, fixes, and AOPs being forwarded from Link 11B to Link 16 in order to determine the proper setting of the Link 16 Simulation Indicator.

C.4.8.6.4 FJU SIMULATION FILTER

FJUs shall have an operator selectable simulation transmit filter to inhibit the forwarding of simulated data from Link 16 to Link 11 and each Link 11B link. This filter is required to prevent the transmission of simulated data to any link on which any unit is not capable of recognizing simulated data and should be carefully controlled by coordinated filters. Track Alert (Emergency or Force Tell Indicator = 1) shall not force simulated data through the simulation filter.

C.4.9 MESSAGE AND WORD NUMBERING CONVENTIONS

The following numbering conventions are defined to identify the fixed format messages and words.

C.4.9.1 LINK 16 (J-SERIES)C.4.9.1.1 MESSAGE

Jn.m is the numbering convention for a Link 16 message, i.e., a combination of one initial word and any legal combination of extension and continuation words, where n is the Label, Link 16 field value and 0 is less than or equal to n is less than or equal to 31, and m is the Sublabel, Link 16 field value and 0 is less than or equal to m is less than or equal to 7.

For example, J3.2 is the numbering convention for the Air Track message.

C.4.9.1.2 BASIC MESSAGE

Jn.mB is the numbering convention for a Link 16 Basic message, i.e., a combination of an initial word and all extension words that make up a minimum length message as defined in the Transmit and Receive (T/R) rules for the message.

APPENDIX C

For example, J3.2B is the numbering convention for the Air Track Basic message consisting of the J3.2I Air Track initial word and the J3.2E0 Air Track extension word.

C.4.9.1.3 INITIAL WORD

Jn.mI is the numbering convention for the initial word for a Jn.m message.

For example, J3.2I is the numbering convention for the initial word for the J3.2 Air Track message.

C.4.9.1.4 EXTENSION WORD

Jn.mEx is the numbering convention for the extension word x for the Jn.m message, where x is a decimal number from 0 through the limitation imposed by the Message Length Indicator (MLI) field.

For example, J3.2E0 is the numbering convention for the first extension word for the J3.2 Air Track message.

C.4.9.1.5 CONTINUATION WORD

Jn.mCx is the numbering convention for the continuation word x for the Jn.m message, where x is a decimal number from 0 through 31.

For example, J3.2C1 is the numbering convention for the first continuation word for the J3.2 Air Track message.

C.4.9.1.6 LINK 16 MESSAGE LABELING SCHEME

Table C.4.9-1 lists the Link 16 message titles under this labeling scheme.

C.4.9.2 LINK 11/11B (M-SERIES)

APPENDIX C

C.4.9.2.1 MESSAGE

M.xy defines a Link 11/11B message, where x is a decimal number from 0 through 15 and represents the label, and y is an alphabetical character representing the sublabel. The exception to this is an amplifying message (always "8") followed by the label and sublabel of the message which must immediately precede the amplifying message. Table C.4.9-2 lists the Link 11/11B messages.

APPENDIX C

C.5 DETAILED REQUIREMENTS

C.5.1 MESSAGE TRANSLATION REQUIREMENTS

C.5.1.1 GENERAL

This section identifies the message translation requirements to be satisfied by FJUs. This includes an evaluation of messages or message sequences, message contents, link protocols, and message exchange rules. Message translations are provided for each translatable message or message sequence.

C.5.1.2 DETAILED DESCRIPTION OF CONTENTS

This section contains message translations that depict actions required by the FJU for forwarding on one data link due to a particular message being received on another link. These translations are presented as follows:

- a. Message translations for each Link 16 message sequence to a Link 11/11B message or message sequence.
- b. Message translations for each Link 11/11B message or message sequence to a Link 16 message or message sequence.

For each message translation the following sets of information are provided:

- a. Message Translation Trees:
 - (1) Test node diagrams.
 - (2) Test node conditions.
 - (3) Required actions.
 - (4) Notes.
- b. Related Messages.

APPENDIX C

c. Forwarding Transmit Requirements.

d. Data Retention Rules.

C.5.1.2.1 MESSAGE TRANSLATION TREES

A message translation tree is a logical set of conditions depicting how a received message or message sequence is to be tested to determine the appropriate translation and action to be taken. This logic is not intended to direct system design. But the end result, however accomplished, shall be in consonance with required actions depicted in the translation tree. The title at the top of each message translation tree identifies the input message or message sequence for which the tree applies. All required actions and notes refer only to forwarding requirements, not to actions to be taken on the link from which the message is received.

C.5.1.2.1.1 BASIC TRANSLATION CRITERIA

The inputs to a message translation tree are messages received from either the Link 16 or Link 11/11B links that satisfy certain basic criteria. These criteria include such considerations as filters, reporting responsibility determination, and data source determination.

Each message translation tree contains four parts: a test node diagram, test node condition, required actions, and notes.

C.5.1.2.1.2 TEST NODE DIAGRAM AND CONDITIONS

The test node diagram, with conditions, represents binary conditions that must be considered to translate a message. Test nodes that are the same and that appear at different places in the tree are identified by the same test node number and, when possible, appear on the same line. Thus, by processing through the test nodes of a test node diagram, a unique branch that leads to a set of required actions is provided.

APPENDIX C

C.5.1.2.1.3 REQUIRED ACTIONS

The required actions accomplish several functions while collectively identifying all possible options for a given translation. A forwarder shall process the complete received message or message sequence in accordance with the appropriate translation tree, prior to taking any forwarding action. This process will eliminate the possibility of the forwarder originating unnecessary duplicate messages as each 'Required Action' of the Test Node Diagram is being considered. For example, a required action may be to "FWD initial sequence," such as an M.2/M.82 message sequence. Continuing to a subsequent node may result in another "FWD M.2/M.82 initial sequence" and "FWD M.9A(AC=5)." The cumulative set of messages in this example consists of an M.9A(AC=5)/M.2/M.82 message sequence. The action also may identify data that must be retained to satisfy the Link 11/11B/16 protocols and the changes that should be made or flags that should be set to assure that duplicate messages are detected, periodic transmissions are accomplished, subsequent messages are processed, and purging requirements are supported.

When the required action is to forward from one link to another, the abbreviation FWD is used.

When the required action is to transmit on to the received link, the phrase "SET INDICATOR TO TRANSMIT ..." is used.

When a required action results in a message being generated, the FJU shall perform the required data element translation described in section C.5.2.

C.5.1.2.1.4 NOTES

The notes provide additional information or clarification about a test node condition and/or required action.

C.5.1.2.2 RELATED MESSAGES

The related message section provides all the message(s) that can be transmitted as a result of the receipt of a message or message sequence from the other link.

APPENDIX C

C.5.1.2.3 FORWARDING TRANSMIT REQUIREMENTS

The transmit requirements for those messages generated as a result of required actions comply with the protocols of the Link 16 and Link 11/11B links as appropriate. Examples are:

- a. The FJU must maintain a count of the number of times to transmit redundant messages.
- b. The FJU must know how frequently periodic messages are required to be transmitted.

C.5.1.2.4 DATA RETENTION RULES

The data retention rules pertain only to the data forwarding function of an FJU and identify data that must be maintained for proper data transfer over multi-TDL interfaces. Upon completion of all data forwarding functions associated with receipt of the listed message including receipt/compliance and redundant transmissions, data may be purged when data retention rules are not specified. Message specific retention rules are specified in section C.5.1 after the Notes and Forwarding Transmit Requirements. General retention rules and minimum retention times for periodically transmitted messages are specified in the following paragraphs.

C.5.1.2.4.1 GENERAL RETENTION RULES

The following general retention rules apply to all messages:

- o An FJU shall retain the TN of all inactive PUs, RUs, and C² JUs for whom data are normally forwarded.
- o An FJU shall retain the simulation status of all JUs, tracks, points, bearings, fixes, and AOPs being forwarded to Link 11B.
- o An FJU shall retain the simulation status of all tracks, points, bearings, fixes, and AOPs being forwarded from Link 11B to Link 16.

APPENDIX C

- o An FJU shall retain the special processing status of all tracks, points, bearings, fixes, and AOPs being forwarded to or from Link 11B.
- o If the Link 16 TN being forwarded is greater than 07777 (octal), the TN association of Link 16 to Link 11/11B shall be retained.
- o An FJU may purge all data on a track or point upon receipt of a drop track report on that track or point from the R² unit.
- o When a unit for whom the FJU has been forwarding data is no longer an active source, the FJU may purge all data previously received from that unit.

C.5.1.2.4.2 MINIMUM RETENTION TIMES

The FJU may purge all data on periodically updated tracks/points/messages after the following minimum retention times:

- o If a positional update/test message/PPLI has not been received from a PU, RU, SU, or JU for 60 seconds.
- o If a real-time Air track has not been updated within 60 seconds.
- o If a real-time Surface (Maritime) track, Subsurface (Maritime) track, or Land (Ground) track or point has not been updated within 90 seconds. FJUs that purge a land (ground) point shall transmit an M.9A(AC=4) Drop Track Report onto Link 11/11B with the source set to the TN of the JU originator of the point.
- o If a nonreal-time Air track has not been updated within 150 seconds.
- o If a nonreal-time Surface (Maritime), Subsurface (Maritime), or Land (Ground) track has not been updated within 360 seconds.

APPENDIX C

- o If an Emergency Point has not been updated within 60 seconds. FJUs that purge an Emergency Point shall transmit an M.9A(AC=4) Drop Track Report onto Link 11/11B with the source set to the TN of the JU originator of the point.
- o If a Reference Point has not been updated within 360 seconds. FJUs that purge a Reference Point shall transmit an M.9A(AC=4) Drop Track Report onto Link 11/11B with the source set to the TN of the JU originator of the point.

C.5.1.3 TECHNICALLY ILLEGAL/INVALID MESSAGE/MESSAGE SEQUENCE DETERMINATION

The FJU shall perform preliminary checks on all received messages for both validity and legality as defined by MIL-STD-6016 and/or MIL-STD-6011C.

C.5.1.3.1 GENERAL

The FJU shall evaluate received data for uncorrected errors on Link 16 or detected errors on Link 11/11B and make appropriate decisions to forward or discard the data. The forwarding function shall have the following provisions for routing messages between Link 16 and Link 11/11B as a result of link error detection and correction procedures.

- a. J-Series and M-Series information shall be forwarded if it is received with no detected errors.
- b. J-Series information shall be forwarded if it is received with detected errors and the errors were corrected.
- c. J-Series information shall not be forwarded if it is received with uncorrectable errors.
- d. M-Series information shall not be forwarded if it is received with detected errors. However, if only one of the two M.1 messages from Link 11 is valid and is from an already established Link 11 unit, the valid message and the following data report shall be accepted for forwarding.

APPENDIX C

C.5.1.3.2 TECHNICALLY ILLEGAL/INVALID EXAMPLES

The following are provided as examples of illegal/invalid messages and message sequences and are not intended to be all inclusive.

a. A received Link 16 Basic message that does not include its extension word i.e., J2.0, J2.2, J2.3, J2.5, J2.6, J3.1, J3.2, or J3.3.

b. A message received with a bit field set to an "ILLEGAL" or "NOT USED" value, unless otherwise specified in Section C.5.2. This check may be limited to those fields that the FJU translates to forward the received message.

c. A message which must be addressed to a specific unit with the Addressee TN set to "NO STATEMENT" or "Collective Address."

d. Receipt of improper message sequences, such as:

- o An M.8x message without a preceding message to amplify.
- o On Link 11, a message sequence without an M.1 message.
- o On Link 16, a message without an initial word.
- o A continuation word followed by an extension word.

e. A received Link 16 track message that does not include a position, i.e., either 0.0103, 0.0051, or 0.0013 Minute Latitude or 0.0103, 0.0051, or 0.0013 Minute Longitude is set to No Statement in a J2.0, J2.2, J2.3, J2.4, J2.5, J2.6, J3.0, J3.1, J3.2, J3.3, J3.4, or J3.5 message.

f. The following Link 16 messages with Reference TN set to No Statement: J3.0, J3.1, J3.2, J3.3, J3.4, J3.5, J3.7, J5.4, J6.0, J7.0 (except ACT = 6), J7.1 (ACT = 1), J7.4, J7.5, J10.2, J10.3, J10.5, J10.6, J13.2, J13.3, J13.4, J13.5, and J14.0 message.

NOTES

1. If Unit Type, altitude or speed data are available, the FJU shall transmit the M.81 message on Link 11 and the M.85 message on Link 11B.
2. On Link 11 the initial sequence is two M.1 messages followed by an M.81 message if data are available, followed by an M.5 message. On Link 11B the initial sequence is M.9A(AC=0) and M.5 messages followed by an M.85 message if data are available.
3. If both the Emergency and the Force Tell Indicators have been set to "on", only the Emergency alert is transmitted on Link 11/11B. Transmission of an initial message sequence is not required if the Force Tell Indicator is changed to "on" and the Emergency alert is already being reported.
4. If the simulated unit is a C² IU being forwarded to Link 11B, the M.9A(AC=0, SI=1) message shall precede appropriate messages. If the simulated unit is a C² IU being forwarded to Link 11, the M.1(SIM=1) message shall be part of the initial sequence. (See paragraph C.4.8.6)

FORWARDING TRANSMIT REQUIREMENTS

LINK 11

1. An M.1 message sequence shall be transmitted at each FJU transmit opportunity.
2. An M.81 message is transmitted when unit type, velocity or height/depth data are available. The M.81 message is transmitted with the initial transmit opportunity following the second M.1 message for that unit. Thereafter, the M.81 message is transmitted every fourth transmit opportunity.
3. An M.5 message shall be transmitted at the first transmit opportunity following the M.81 message or the second M.1 message as appropriate. Thereafter, the M.5 message is transmitted at every transmit opportunity.

LINK 11B

1. An M.5 message shall be transmitted with the initial sequence and thereafter, each time data change.
2. An M.85 message shall be transmitted following every M.5 message if course and speed data are available.

LINK 11/11B

1. The M.9A(AC=5) message shall be transmitted prior to each M.5 message that is transmitted when an Emergency or Force Tell alert status for the unit exists.
2. M.9A(AC=7) message will be forwarded once in each of three successive transmit opportunities.

APPENDIX C

TABLE C.5.1-J2.0. J2.0 to Link 11/11B Message Translation Tree (Sheet 6 of 6)

DATA RETENTION RULES

1. The FJU shall retain all forwardable track data on all active PUs, RUs, and C² JUs for whom data are being forwarded.
2. Timers shall be maintained on each active PU, RU, or C² JU being forwarded for proper initiation of update message sequences or Drop Track messages.

APPENDIX C

APPENDIX C

TABLE C.5.1-J2.2. J2.2 to Link 11/11B Message Translation Tree (Sheet 3 of 7)

NOTES

1. If the received J2.2 PPLI message has the Command and Control Indicator set to 0 (nonC² JU), Source Track Number 00200 (octal) or greater, or the FJU has exceeded its maximum data source capacity (see paragraph C.4.7.2), the FJU shall forward the received PPLI message(s) onto Link 11/11B as an Air Surveillance message(s). (See paragraph C.4.7.1.) When a C² JU is determined to be active, the FJU shall initiate and forward the appropriate Systems Information messages containing the unit's identification and location onto Link 11/11B. The rules and procedures describing the appropriate messages are as defined for Link 11 and Link 11B.
2. If a unit becomes active and is currently being reported on either Link 11, 11B, or 16 as an Air Surveillance track, it shall be forwarded in accordance with section C.4.7. The previously reported Air Surveillance track shall be redesignated immediately as an active Interface Unit (IU). The possibility exists that an additional Air Surveillance report(s) may be received and shall be discarded, particularly from asynchronous links.
3. If both the Emergency and Force Tell Indicators have been set to "on," only the Emergency alert will be transmitted on Link 11 and Link 11B. Transmission of an initial message sequence is not required if the Force Tell Indicator is changed to "on" and the Emergency alert is already being reported.
4. If both alerts have existed and one ceases, the remaining alert status will continue to be transmitted as an M.9A(AC=5) message and the other, if it had been forwarded, shall be terminated with an M.9A(AC=7) message. Optionally, an FJU may forward an M.9A(AC=7) message even though a previous M.9A(AC=5) message for the same alert had not been transmitted.

APPENDIX C

TABLE C.5.1-J2.2. J2.2 to Link 11/11B Message Translation Tree (Sheet 4 of 7)

NOTES (Continued)

5. When the PPLI message is forwarded in an M.1/M.5 message sequence, the M.81 amplification message is transmitted on Link 11, if appropriate, and the M.85 amplification message is transmitted on Link 11B, if appropriate.
6. If the simulated unit is a nonC² JU being forwarded to Link 11 or 11B, or a C² JU being forwarded to Link 11B, the M.9A(AC=0, SI=1) message shall precede appropriate messages. If the simulated unit is a C² JU being forwarded to Link 11, the M.1(SIM=1) message will be part of the initial sequence. (See paragraph C.4.8.6)

NOTES

1. If the received J2.4 PPLI message has the Command and Control Indicator set to 0 (nonC² JU), Source Track Number 00200 (octal) or greater, or the FJU has exceeded its maximum data source capacity (see paragraph C.4.7.2), the FJU shall forward the received PPLI message(s) onto Link 11/11B as a Subsurface Surveillance message(s). (See paragraph C.4.7.1.) When a C² JU is determined to be active, the FJU shall initiate and forward the appropriate Systems Information messages containing the unit's identification and location onto Link 11/11B. The rules and procedures describing the appropriate message are as defined for Link 11 and Link 11B.
2. If a unit becomes active and is currently being reported on either Link 11, 11B, or 16 as a Subsurface Surveillance track, it shall be forwarded in accordance with section C.4.7. The previously reported Subsurface Surveillance track shall immediately be redesignated as an active IU. The possibility exists that an additional Subsurface Surveillance report(s) may be received and shall be discarded, particularly from asynchronous links.
3. If both the Emergency and Force Tell Indicators have been set to "on," only the Emergency alert will be transmitted on Link 11 and Link 11B. Transmission of an initial message sequence is not required if the Force Tell Indicator is changed to "on" and the Emergency alert is already being reported.
4. If both alerts have existed and one ceases, the remaining alert status will continue to be transmitted as an M.9A(AC=5) message and the other, if it had been forwarded, shall be terminated with an M.9A(AC=7) message. Optionally, an FJU may forward an M.9A(AC=7) message even though a previous M.9A(AC=5) message for the same alert had not been transmitted.

FORWARDING TRANSMIT REQUIREMENTS

LINK 11

1. An M.1 message sequence shall be transmitted at each FJU transmit opportunity. When an M.81 message is being transmitted, it shall be transmitted immediately following the initial M.1 message sequence and thereafter once every four M.1 message sequences.
2. An M.5 message shall be transmitted immediately following the initial M.1 or M.1/M.81 message sequence and thereafter every FJU transmit opportunity.

LINK 11B

1. An M.5 message shall be transmitted with the initial sequence and thereafter, each time data change.
2. When data are available, an M.85 message shall be transmitted following every M.5 message.

LINK 11/11B

1. An M.9A(AC=5) message shall be transmitted prior to each M.5 message that is transmitted when an Emergency or Force Tell alert status for the unit exists.
2. The M.9A(AC=7) will be forwarded once in each of three successive transmit opportunities.
3. Forwarding Transmit Requirements for M.4A/M.84A messages are specified in table C.5.1-J3.4.

APPENDIX C

TABLE C.5.1-J2.4. J2.4 to Link 11/11B Message Translation Tree (Sheet 7 of 7)

DATA RETENTION RULES

1. The FJU shall retain all forwardable track data on all active JUs being forwarded onto Link 11/11B.
2. Timers shall be maintained on each active JU being forwarded for proper initiation of update message sequences or Drop Track messages.

C-98

MIL-STD-6016B
APPENDIX C

APPENDIX C

TABLE C.5.1-J2.5. J2.5 to Link 11/11B Message Translation Tree (Sheet 3 of 7)

NOTES

1. If the received J2.5 PPLI message has the Command and Control Indicator set to 0 (nonC² JU) or has Source Track Number 00200 (octal) or greater, the FJU shall forward the received PPLI message(s) onto Link 11/11B as a Special Points Position message(s). (See paragraph C.4.7.1.) When a C² JU is determined to be active, the FJU shall initiate and forward the appropriate Systems Information messages containing the unit's identification and location onto Link 11/11B. The rules and procedures describing the appropriate messages are as defined for Link 11 and Link 11B.
2. If a unit becomes active and is currently being reported on either Link 11, 11B, or 16, it shall be forwarded in accordance with section C.4.7. The previously reported Point shall be redesignated immediately as an active IU. The possibility exists that an additional Point report(s) may be received and shall be discarded, particularly from asynchronous links.
3. If both the Emergency and Force Tell Indicators have been set to "on," only the Emergency alert will be transmitted on Link 11 and Link 11B. Transmission of an initial message sequence is not required if the Force Tell Indicator is changed to "on" and the Emergency alert is already being reported.
4. If both alerts have existed and one ceases, the remaining alert status will continue to be transmitted as an M.9A(AC=5) message and the other, if it had been forwarded, shall be terminated with an M.9A(AC=7) message. Optionally, an FJU may forward an M.9A(AC=7) message even though a previous M.9A(AC=5) message for the same alert had not been transmitted.
5. When the PPLI message is forwarded in an M.1/M.5 message sequence, the M.81 amplification message is transmitted on Link 11, if appropriate, and the M.85 amplification message is transmitted on Link 11B, if appropriate.

APPENDIX C

TABLE C.5.1-J2.5. J2.5 to Link 11/11B Message Translation Tree (Sheet 4 of 7)

NOTES (Continued)

6. If the simulated unit is a nonC² JU being forwarded to Link 11 or 11B, or a C² JU being forwarded to Link 11B, the M.9A(AC=0, SI=1) message shall precede appropriate messages. If the simulated unit is a C² JU being forwarded to Link 11, the M.1(SIM=1) message will be part of the initial sequence. (See paragraph C.4.8.6)

APPENDIX C

TABLE C.5.1-J3.0. J3.0 to Link 11/11B Message Translation Tree (Sheet 5 of 8)

NOTES

1. J3.0 Point Types = 4-6 have no Link 11/11B equivalent, and 9-15 are Undefined. The following J3.0 Point Amplification values are Undefined or have no Link 11/11B equivalent:

<u>Point Type</u>	<u>Point Amplification</u>
0	10-15
1	10-15
2	4, 7-15
3	9-11, 13-15
7	7, 11, 14-15
8	3-15

2. The M.9A(AC=0, SI=1) message shall precede appropriate messages. (See paragraph C.4.8.6)

3. The M.4B, M.4C, and M.84C are not transmitted on Link 11B.

4. Two J3.0 messages are required to report a NOTACK Area or Friendly Weapon Danger Area (FWDA). One message contains the Time of Activation, and the other message contains the Time of Deactivation. These two times are both required to properly report a NOTACK Area or FWDA on Link 11/11B. If only one time is received, see table C.5.2-M.4A-2.

5. If the J3.0C5 contains the Missile Track Number (Related Track Number, 2 is not equal to zero) and Connect/Disconnect = 0, an M.9B (AC=6) Association message may also be transmitted to Link 11 and Link 11B showing the Missile/Point relationship. If the J3.0C5 word contains the Missile Track Number and Connect/Disconnect = 1, an M.9B (AC=15) Terminate Pairing/Association may also be transmitted on Link 11/11B.

APPENDIX C

TABLE C.5.1-J3.0. J3.0 to Link 11/11B Message Translation Tree (Sheet 7 of 8)

FORWARDING TRANSMIT REQUIREMENTS

1. When a J3.0 message is received and Point Type is equal to 7 and Point Amplification is not equal to 6 (NOTACK Area) or 13 (FWDA) then the M.4A message shall be transmitted once in each of two consecutive transmission opportunities when initiated on Link 11. The M.4A initial sequence shall be transmitted by the FJU at the first transmission opportunity and every transmission opportunity thereafter until the M.9A(AC=0) message is acknowledged on Link 11B.
2. When both J3.0 messages (J3.0 Time Function = 1, Time of Activation and 2, Time of Deactivation) are received and Point Type is equal to 7 and Point Amplification equal to 6 or 13, then the M.4A/M.84A/M.4B messages shall be transmitted once in each of seven transmission opportunities when initiated on Link 11.
3. The M.4C initial sequence shall be transmitted by the FJU once in each of two successive transmission opportunities on Link 11.
4. The M.5 initial sequence shall be transmitted by the FJU once in each of two successive transmission opportunities on Link 11. The M.5 initial sequence shall be transmitted by the FJU at the first transmission opportunity and every transmission opportunity thereafter until the M.9A(AC=0) message is acknowledged on Link 11B.
5. The M.9F(AC=0) message shall be transmitted by the FJU once in each of two successive transmission opportunities when initiated on Link 11/11B.
6. Upon receipt of the J3.0 message, one M.4A/M.84A or one M.4C/M.84C (on Link 11 only) message sequence, or one M.5 and M.85 if appropriate, or one M.9F(AC=0)/M.89F(AC=0) message sequence, whichever sequence is appropriate, shall be forwarded once in each of two successive transmission opportunities on Link 11/11B.

APPENDIX C

TABLE C.5.1-J3.0. J3.0 to Link 11/11B Message Translation Tree (Sheet 8 of 8)

FORWARDING TRANSMIT REQUIREMENTS (Continued)

7. Upon receipt of a J3.0 message, one M.5 and M.85 message if appropriate, shall be forwarded by the FJU on Link 11B.

8. On Link 11, if appropriate, the M.4B message shall be forwarded with every M.4A or M.4C message sequence combination that it amplifies for which Time (Hours and Minutes) is provided.

9. When the J3.0 message reports velocity and time and/or altitude, for a reference point, a second M.5 identical to the first shall be sent followed by a second M.85 in which the alternate parameters are included.

10. If appropriate, the M.9F(AC=1) shall be forwarded immediately following every M.9F(AC=0)/M.89F(AC=0) message combination that it amplifies.

11. The M.9A(AC=5) message, if appropriate, shall be forwarded at the same frequency as, and immediately preceding the message to which it applies. If two message pairs are being transmitted to forward one J3.0 message, the M.9A(AC=5) need not be transmitted prior to the second message pair. The M.9A(AC=5) shall be transmitted prior to the M.9A(AC=0) if both are appropriate.

12. The M.9A(AC=7) message shall be forwarded once in each of three successive transmit opportunities.

DATA RETENTION RULES

The FJU shall retain the status of the Force Tell Indicator for all reference points being forwarded.

APPENDIX C

TABLE C.5.1-J3.2. J3.2 to Link 11/11B Message Translation Tree (Sheet 5 of 6)

FORWARDING TRANSMIT REQUIREMENTS

1. The FJU shall forward the initial sequence on Link 11B with the M.9A(AC=0)/M.2/M.82/M.11D message sequence at the first transmission opportunity and every opportunity thereafter until the M.9A(AC=0) message is acknowledged.
2. The FJU shall forward the M.2/M.82/M.11D initial sequence once on Link 11.
3. The M.2 message shall be forwarded for each subsequent Link 16 Air Track message received.
4. The M.82 message shall be forwarded at least once every fourth transmission of the M.2 message for real-time air tracks and will be reinitiated when reporting responsibility (R^2) or identity data changes.
5. The M.82 messages shall be forwarded with every M.2 message for nonreal-time air tracks. If both time and velocity are available, an M.2/M.82 message sequence shall be transmitted with the M.82 message reflecting time and a second M.2/M.82 message pair will be transmitted with the M.82 message reflecting velocity. When a NRT track velocity changes from nonzero to zero velocity, the M.2/M.82 must be reported with zero velocity between one and three times in successive transmission opportunities. Thereafter, only the M.2/M.82 for time will be reported.
6. Upon receipt of the J3.2C1 word with nonzero IFF/SIF data, the M.11D message(s) shall be forwarded.
7. If the M.9A(AC=5) is appropriate, it will be forwarded preceding each M.2/M.82 message sequence.

APPENDIX C

TABLE C.5.1-J3.2. J3.2 to Link 11/11B Message Translation Tree (Sheet 6 of 6)

FORWARDING TRANSMIT REQUIREMENTS (Continued)

8. The M.9A(AC=7) message will be forwarded once in each of three successive transmit opportunities.

9. If the M.9A(AC=1, CI=1) is appropriate, it will be forwarded preceding each M.2 or M.2/M.82 message sequence. If the M.9A(AC=1, CI=0) is appropriate, it will be forwarded once prior to the M.2/M.82 message sequence.

DATA RETENTION RULES

The FJU shall retain the latest reported ID, Identity Amplifying Descriptor, Platform, Platform Activity and the status of the Exercise, Identity Difference, Emergency, and Force Tell Indicators for all tracks being forwarded.

C-154

APPENDIX C

TABLE C.5.1-J3.7. J3.7 to Link 11/11B Message Translation Tree (Sheet 3 of 6)

NOTES

1. If both the Frequency, 1 value in the J3.7C4 and the Elevation Angle value in the J3.7C1 are not No Statement, then consecutive M.6A messages need to be forwarded with Switch = 0 and Switch = 1, respectively.
2. Link 11/11B Transmit Rules only require that M.6A, M.6B/M.86B, and M.9F/M.89F messages be transmitted when data change, whereas Link 16 Transmit Rules require that J3.7 messages be transmitted periodically every 48 seconds and when data change. However, these messages shall be forwarded upon receipt of each J3.7 message, regardless of whether data have changed. This is an exception to the general forwarding rule in paragraph C.4.3.
3. There is no difference between forwarding an initial sequence and subsequent transmissions on Link 11. On Link 11B, the initial sequence is preceded by an M.9A(AC=0), which is repeated at each transmit opportunity until it is acknowledged. After the M.9A(AC=0) is acknowledged, Link 11 and 11B message sequences are the same. The M.9A(AC=0) is given only once in a sequence for an initial sequence, e.g., M.9A(AC=0)/M.6B/M.86B(EV SW=0)/M.6B/M.86B(EV SW=1).
4. If both the Emergency and Force Tell Indicators have been set to "on," only the Emergency alert will be transmitted on Link 11 and Link 11B. Transmission of an initial message sequence is not required if the Force Tell Indicator is changed to "on" and the Emergency alert is already being reported. If this is an initial report with Emergency and Force Tell Indicator = 0, this does not constitute a change and the M.9A(AC=7) is not sent.
5. The M.9A(AC=0, SI=1) message shall precede appropriate messages. (See paragraph C.4.8.6)

FORWARDING TRANSMIT REQUIREMENTS

1. The FJU shall transmit the M.6A or M.6B/M.86B initial sequence on Link 11B, immediately preceded by a M.9A(AC=0) message at the first transmission opportunity and every opportunity thereafter until the M.9A(AC=0) message is acknowledged.
2. The M.6A or the M.6B/M.86B shall be transmitted once in each of two consecutive transmission opportunities on Link 11 and once on Link 11B, except as required by rule 1 above.
3. The FJU shall transmit the M.9F(AC=0)/M.89F(AC=0) or M.9F(AC=0)/M.89F(AC=0)/M.9F(AC=1) initial sequence on Link 11B immediately preceded by an M.9A(AC=0) message at the first transmission opportunity and every transmission opportunity thereafter until the M.9A(AC=0) is acknowledged.
4. The M.9F(AC=0)/M.89F(AC=0) and M.9F(AC=0)/M.89F(AC=0)/M.9F(AC=1) shall be transmitted once in each of two consecutive transmission opportunities, except as required by rule 3 above.
5. If the M.9A(AC=5) is appropriate, it shall be transmitted at the same frequency and immediately preceding the M.6A, M.6B, or M.9F message sequence to which it applies. The M.9A(AC=5) shall be transmitted prior to the M.9A(AC=0), if both are appropriate.
6. The M.9A(AC=7) shall be transmitted once in each of three consecutive transmission opportunities.

FORWARDING TRANSMIT REQUIREMENTS

1. The FJU shall forward the M.4D/M.84D initial message sequence and if appropriate, the M.4B, on Link 11 once in each of two successive transmission opportunities.
2. The M.4D/M.84D message sequence, and M.4B message if appropriate, shall be forwarded for each subsequent J5.4 message received.
3. If appropriate, the M.9A(AC=0, SI=1) message shall be forwarded once preceding every transmission of a simulated track on Link 11.
4. The M.9A(AC=5) message, if appropriate, shall be forwarded at the same frequency as, and immediately preceding the M.4D message to which it applies. The M.9A(AC=5) shall be transmitted prior to the M.9A(AC=0) if both are appropriate.
5. The M.9A(AC=7) message shall be forwarded once in each of three successive transmission opportunities.

DATA RETENTION RULES

The FJU shall retain the latest reported status of the Emergency and Force Tell Indicators for all J5.4 TNs being forwarded.

APPENDIX C

TABLE C.5.1-J6.0. J6.0 to Link 11/11B Message Translation Tree (Sheet 3 of 3)

FORWARDING TRANSMIT REQUIREMENTS

1. Three M.11M/M.811M message sequences shall be forwarded for each J6.0 message unless Activity Amplification Index values 1 through 10 are reported.
2. When the J6.0 message reports Activity Amplification Index values 1 through 10, the M.11M/M.811M message sequence shall be forwarded three times, except that a change in the Activity Amplification Index shall interrupt the redundant transmission of the message containing the previous Activity Amplification Index. The redundant J6.0 messages shall be discarded.

DATA RETENTION RULES

There are no Data Retention Rules associated with this message translation.

APPENDIX C

MIL-STD-6016B

APPENDIX C

TABLE C.5.1-J7.0. J7.0 to Link 11/11B Message Translation Tree (Sheet 2 of 4)

NOTES

1. If the FJU holds local data for the track, the FJU shall assume R^2 for the track rather than forwarding a Drop Track message. If the reference track is a C^2 IU being forwarded on Link 11B, link protocol demands that a Drop Track message be sent to signify inactive status of an interface unit. The latter is true even in those cases where the FJU assumes R^2 for the C^2 IU.
2. Environment/Category of 2 (Air) or 3 (Surface) are the only legal values on Link 11/11B for Information Difference or Change Data Order messages.
3. If the FJU is retaining ID data received in a previous M.9A(AC=1, CI=0) or J7.0 (ACT = 1) message for the same TN, disregard this message.

APPENDIX C

TABLE C.5.1-J7.0. J7.0 to Link 11/11B Message Translation Tree (Sheet 4 of 4)

FORWARDING TRANSMIT REQUIREMENTS

1. A single M.9A(AC=1, 2, or 6) message shall be forwarded for each J7.0 (ACT = 1 or 2) message received.
2. Upon receipt of the J7.0 (ACT = 3 or 4), the M.9A(AC=5 or 7) shall be transmitted in three consecutive transmit opportunities.
3. The M.9A(AC=4) message is transmitted in two consecutive transmit opportunities after receipt of a J7.0 (ACT = 0) message. If the track becomes active, including an R² shift, prior to either of the M.9A(AC=4) messages being transmitted, the M.9A(AC=4) message(s) that would have followed will not be transmitted.

DATA RETENTION RULES

The FJU shall retain ID data received in a J7.0 (ACT = 1) message until the conflict has been resolved by the R² unit or an R² shift occurs.

TABLE C.5.1-J10.2. J10.2 to Link 11/11B Message Translation Tree (Sheet 4 of 4)

FORWARDING TRANSMIT REQUIREMENTS

1. The J10.2C1 word is used to report multiple engagements. Separate M.14 message sequences will be generated for each engagement received.
2. One M.14 message will be forwarded for each Weapon Engagement Status received unless W/ES = 5, 8, or 9.
3. M.14 W/ES = 5, 8, or 9 message(s) will be forwarded in seven consecutive transmit opportunities. The redundant J10.2 message received will be discarded. When Weapon Engagement Status changes from 5 or 8 for identical TN Friendly Weapon System and TN Target, prior to completion of redundant transmissions, the previous values will no longer be reported.

DATA RETENTION RULES

There are no Data Retention Rules associated with this message translation.

APPENDIX C

TABLE C.5.1-J10.3. J10.3 to Link 11/11B Message Translation Tree (Sheet 3 of 5)

NOTES

1. The FJU responds to each J10.3 message, which is not discarded, with a J10.3 CANTPRO message or a J10.3 Machine Receipt (MR) message. The FJU shall originate a J10.3 CANTPRO response message only to a J10.3 Original (R/C = 0) Handover message and then only in those cases shown in this table. The FJU shall respond with a J10.3 MR message for those J10.3 messages that are accepted for forwarding. The FJU then forwards the proper handover sequence to the addressee on the appropriate data link. If the FJU fails to receive an M.10A MR message or other reply, the sequence is repeated until seven attempts have been made to forward the data. If after seven attempts an M.10A MR message or other reply is not received, the FJU shall send a J10.3 CANTPRO (R/C = 21) message addressed to the originator of the J10.3 Original (R/C = 0) message. If an M.10A MR message is not received for a J10.3 WILCO, CANTCO, or CANTPRO reply message forwarded to Link 11/11B after seven attempts to forward, the FJU takes no further action. If a reply is received from the addressee prior to the transmission of a J10.3 MR message originated by the FJU, that reply may be transmitted instead of the FJU's J10.3 MR message.
2. The Voice Call Sign forwarded shall be limited to the Voice Call Sign contained within the J10.3 message being forwarded. A voice call sign held in the FJU database or received in another message shall not be included in the handover sequence.
3. The handover sequence for an original J10.3 (R/C = 0) message being forwarded on Link 11/11B includes, in order, an M.9A(AC=6) message as indicated in the message translation tree, an M.10A message, followed by appropriate M.9E messages. The sequence for a J10.3 WILCO (R/C = 3) message being forwarded on Link 11/11B is an M.10A message followed by appropriate M.9E messages. Other J10.3 message replies on Link 11/11B are sent an M.10A message alone. In case of redundant Link 11/11B transmissions being required, the full sequence is repeated with each transmission opportunity.

FORWARDING TRANSMIT REQUIREMENTS

The appropriate handover sequence shall be redundantly forwarded until a machine receipt, or other appropriate reply, is received or until redundancy requirements are met. When redundancy requirements are met and a reply has not been received for a forwarded Original (R/C = 0) Handover message, the FJU shall reply on Link 16 with a CANTPRO (R/C = 21).

APPENDIX C

TABLE C.5.1-J13.2. J13.2 to Link 11/11B Message Translation Tree (Sheet 5 of 5)

FORWARDING TRANSMIT REQUIREMENTS

1. An M.11B or M.11C and/or M.14 message or series of messages shall be transmitted for each J13.2 message received. There are no cases where both the M.11B and the M.11C message will be forwarded for a single J13.2 message received. An M.14 and either an M.11B or M.11C message or series of messages may result from a J13.2 message received.
2. When an M.11B message is forwarded for a J13.2 message received from a JU under own unit control, the FJU shall replace controller manually entered platform status data for the JU with non-zero platform status data from the last received J13.2 message prior to forwarding the M.11B message.
3. When the J13.2 message reports time remaining on station and pounds of fuel, two M.11B messages shall be transmitted with identical information with the exception of the Fuel/Time Switch and Fuel/Time fields.
4. When the J13.2 message contains data that result in a series of two or three M.11C messages, each M.11C message shall be transmitted with identical A-Frames.

FORWARDING TRANSMIT REQUIREMENTS

1. The M.6D(Control=0-7, 14, or 15) message with R/C $\neq$ 1 shall be redundantly forwarded until a Machine Receipt, or other appropriate reply, is received or until redundancy requirements are met. When redundancy requirements are met and a reply has not been received for an Original (R/C=0) message, the FJU shall reply on Link 16 with a CANTPRO (R/C = 21).
2. The M.6D(Control=0-7) message with R/C = 1 shall be forwarded seven times on Link 11/11B. The redundant J14.2 R/C = 1 messages received shall be discarded.
3. The M.6D(Control=14 or 15) message with R/C = 1 shall be forwarded two times on Link 11/11B. The redundant J14.2 R/C = 1 messages received shall be discarded.
4. The M.6D(Control=8-13) message shall be forwarded two times on Link 11/11B. The redundant J14.2 R/C = 1 messages received shall be discarded.

APPENDIX C

APPENDIX C

TABLE C.5.1-M.1. M.1/M.81/M.11D to Link 16 Message Translation Tree (Sheet
2 of 4)

NOTES

1. The locations of all units in the Link 11/11B interface must be reported either in the M.1 Data Reference Position message or the M.5 Special Points Position message. However, systems may, in the same Link 11 transmit opportunity, report unit location in M.1's having R/P = 0 followed by a report of the SCC location in M.1's having R/P = 1, in which case, an M.5 message will not normally be received.
2. The FJU shall check to determine if M.11D message(s) having IFF/SIF data for the unit follow the M.1 or M.1/M.81 sequence. This check will terminate after three Link 11/11B message frame times.

APPENDIX C

TABLE C.5.1-M.1. M.1/M.81/M.11D to Link 16 Message Translation Tree (Sheet
4 of 4)

FORWARDING TRANSMIT REQUIREMENTS

1. A single J2.0 message shall be transmitted for each M.1 message sequence received on Link 11. In cases where two separate M.1 message sequences are received during a single transmit opportunity, the FJU may transmit a single J2.0 or a separate J2.0 for each M.1 sequence.
2. J2.0 messages shall be redundantly transmitted for all active units received from Link 11B.
3. The J2.0C1 shall be transmitted by the FJU with the next periodic update of the J2.0B message when IFF/SIF data are received.

DATA RETENTION RULES

1. The FJU shall retain track and IFF/SIF data on all active PUs and RUs for whom data are being forwarded.
2. Timers shall be maintained on each active PU and RU being forwarded for proper initiation of update PPLI messages or Drop Track messages.

C-257

MIL-STD-6016B

APPENDIX C

TABLE C.5.1-M.2. M.2/M.82/M.11D to Link 16 Message Translation Tree (Sheet
2 of 4)

NOTES

1. The FJU shall check to determine if the next message received from the PU/RU Source is for the specified track number. This check will terminate after three Link 11/11B message frame times. Track report message sequences received from Link 11/11B include the following variations:

- o M.2,
- o M.2/M.82, or
- o M.2/M.82/M.2/M.82.

Additionally, M.11D messages may be included following the track report. The FJU shall include all data received when surveillance tracks are forwarded to Link 16.

2. Refer also to the M.11D to Link 16 message translation tree.

3. The FJU shall retain and update data received from the R² unit and track alert data or IFF/SIF clear data received from any source. The FJU shall forward all data held when the J3.2 message is transmitted. Additionally, the FJU shall retain and forward any values received from a JU for identity-related data (ref. section C.5.3, General Note 20) and for data elements not applicable to Link 11/11B.

4. When an ID or PRI AMP change is received without the amplifying message, all previously received M.82 message data will continue to be forwarded, except that the ID AMP will change to No Statement.

TABLE C.5.1-M.2. M.2/M.82/M.11D to Link 16 Message Translation Tree (Sheet
4 of 4)

FORWARDING TRANSMIT REQUIREMENTS

1. When the initial sequence for an Air track is received from Link 11/11B, the FJU will set an indicator to initiate and transmit the appropriate J3.2 message with all data.
2. A J3.2I/J3.2E0 word sequence will be forwarded for each subsequent Link 11/11B Air Track message sequence received.
3. A J3.2I/J3.2E0/J3.2C1 word sequence will be transmitted every 8 transmissions of the J3.2B basic message for real-time Air tracks and will be reinitiated when: (1) M.11D IFF/SIF data are changed, (2) any M.2 or M.82 fields translatable to the J3.2C1 are changed, or (3) nonreal-time tracks are reported.

DATA RETENTION RULES

The FJU shall retain the latest reported ID, PRI AMP, ID AMP, IFF/SIF, and the status of the Emergency and Force Tell Indicators for all tracks being forwarded.

C-261

MIL-STD-6016B

APPENDIX C

TABLE C.5.1-M.3. M.3/M.83/M.11D to Link 16 Message Translation Tree (Sheet
2 of 4)

NOTES

1. The FJU shall check to determine if the next message received from the PU/RU Source is for the specified track number. This check will terminate after three Link 11/11B message frame times. Track report message sequences received from Link 11/11B include the following variations:

- o M.3,
- o M.3/M.83, or
- o M.3/M.83/M.3/M.83.

Additionally, M.11D messages may be included following the track report. The FJU shall include all data received when surveillance tracks are forwarded to Link 16.

2. Refer also to the M.11D to Link 16 message translation tree.

3. The FJU shall retain and update data received from the R² unit and track alert data or IFF/SIF clear data received from any source. The FJU shall forward all data held when the J3.3 message is transmitted. Additionally, the FJU shall retain and forward any values received from a JU for identity-related data (ref. section C.5.3, General Note 21) and for data elements not applicable to Link 11/11B.

4. When an ID or PRI AMP change is received without the amplifying message, all previously received M.83 message data will continue to be forwarded, except that the ID AMP will change to No Statement.

APPENDIX C

TABLE C.5.1-M.4A. M.4A/M.84A/M.4B/M.11D to Link 16 Message Translation Tree
(Sheet 2 of 4)

NOTES

1. The FJU shall check to determine if the next message received from the PU/RU Source is for the specified track number. This check will terminate after three Link 11/11B message frame times. Track report message sequences received from Link 11/11B include the following variations:

- o M.4A
- o M.4A/M.84A
- o M.4A/M.84A/M.4B (Link 11 only)
- o M.4A/M.4B (Link 11 only)

Additionally, an M.11D message may be included following the track report. The FJU shall include all data received when surveillance tracks are forwarded to Link 16.

If the received M.4B message does not follow an M.4A or M.84A message, refer to the M.4B to Link 16 message translation tree.

If the received M.11D message does not follow an M.4A, M.84A, or M.4B message, refer to the M.11D to Link 16 message translation tree.

2. The FJU shall retain and update data received from the R² unit and track alert data or IFF/SIF clear data received from any source. The FJU shall forward all data held when the J3.4 message is transmitted.

3. When reporting NOTACK Area or FWDA information both Time of Activation and Time of Deactivation must be specified. Two J3.0 messages shall be transmitted sequentially, the first with Time Function set to value 1 and the second with Time Function set to value 2.

APPENDIX C

TABLE C.5.1-M.4D. M.4D/M.84D/M.4B to Link 16 Message Translation Tree
(Sheet 2 of 4)

NOTES

1. Up to five M.4D and/or M.84D messages may be received in a legal M.4D/M.84D message sequence. After an M.4D message is received, the FJU must check the following messages until a message which is not an M.4D or M.84D from the same PU/RU source for the specified track number is received. The data from all messages in a legal M.4D/M.84D message sequence shall be forwarded in a single J5.4 message. The following are the only legal M.4D/M.84D message sequences:

- o M.4D(BSW=0 or 1), M.84D(SW=0).
- o M.4D(BSW=0 or 1), M.84D(SW=0), M.4D(BSW=2), M.84D(SW=1).
- o M.4D(BSW=0 or 1), M.84D(SW=0), M.4D(BSW=2), M.84D(SW=1), M.4D(BSW=3).
- o M.4D(BSW=0 or 1), M.84D(SW=0), M.4D(BSW=2), M.4D(BSW=3).
- o M.4D(BSW=0 or 1), M.84D(SW=0), M.4D(BSW=3).
- o M.4D(BSW=0 or 1), M.84D(SW=0), M.4D(BSW=2).

2. If the received M.4B message does not follow an M.84D message, refer to the M.4B to Link 16 Message Translation Tree.

1. When the initial sequence for an ASW Bearing is received from Link 11, the FJU shall set an indicator to initiate and transmit the appropriate J5.4 message with all data.
2. A J5.4I/J5.4E0 word sequence shall be forwarded for each subsequent Link 11 Acoustic Bearing message received.
3. A J5.4I/J5.4E0/J5.4C1 and/or J5.4C2 word sequence shall be forwarded when any field translatable to the J5.4C1 and/or J5.4C2 is received.

DATA RETENTION RULES

There are no Data Retention Rules associated with this message translation.

C-281

APPENDIX C

TABLE C.5.1-M.5. M.5/M.85/M.11D to Link 16 Message Translation Tree (Sheet
2 of 4)

NOTES

1. The FJU will check to see if the next message received from the PU/RU source is related, e.g., M.5/M.85 message sequence, or is a second M.5/M.85 message sequence for the same object reporting M.85 alternative data. Note that in cases where the REF = 1 or 2 in the M.85 message, the M.5 message and the M.85 message will have different track numbers. The check will terminate upon receipt of an unrelated message or after three Link 11/11B time frames, whichever occurs first.

2. M.5 Point = 3 is not translated. M.5 Point = 11-12 are Undefined. The following Point Amplify values of Points other than 7 are Undefined:

<u>Point</u>	<u>Point Amplify</u>
0	1-7
1	1-7
5	4, 7
8	2-7
9	2-7
10	2-7
13	7

3. The FJU shall check to determine if M.11D message(s) having IFF/SIF data for the PU/RU follow(s) the M.5 or M.5/M.85 sequences. This check will terminate after three Link 11/11B message frame times.

4. The J2.0 message is not initiated by receipt of an M.5 message on Link 11. In cases where R/P=1 in the M.1 message, positional and other data are reported in M.5 or M.5/M.85 message(s). In these latter cases the most current M.5/M.85 data are included in J2.0 transmissions until superseded by a new M.5 or M.5/M.85 message sequence.

APPENDIX C

TABLE C.5.1-M.5. M.5/M.85/M.11D to Link 16 Message Translation Tree (Sheet
4 of 4)

FORWARDING TRANSMIT REQUIREMENTS

1. J2.0 messages are redundantly transmitted at the Link 16 rate for all active units that have been received on Link 11B. In all other cases a single Link 16 message shall be forwarded for each M.5 message or M.5/M.85 message sequence received. In cases where a second M.5/M.85 message sequence is received, reporting alternative data in the same opportunity, a single Link 16 message shall be forwarded.
2. The J2.0C1 shall be transmitted by the FJU with the next periodic update of the J2.0B message when IFF/SIF data are received.
3. Upon forwarding a J3.0 or J3.5 (PTI = 0) message, the FJU shall transmit periodic updates at a RRN = 3 (96 seconds, 1.2-2 minute interval) with the Periodic Report Indicator set to value 2.

DATA RETENTION RULES

1. The FJU shall retain track and IFF/SIF data on all PUs, RUs, and SUs being forwarded.
2. Timers shall be retained on each active IU being forwarded for proper initiation of update PPLI messages or Drop Track messages.

APPENDIX C

APPENDIX C

TABLE C.5.1-M.9A. M.9A to Link 16 Message Translation Tree (Sheet 4 of 8)

NOTES

1. The following messages or message sequences constitute valid track reports which follow the M.9A(AC=0) message. When the amplifying message as specified below is not received, the M.9A(AC=0) message shall be discarded.

- o M.2 (valid only on Link 11)
- o M.2/M.82
- o M.3 (valid only on Link 11)
- o M.3/M.83
- o M.4A
- o M.4A/M.84A
- o M.4C/M.84C
- o M.4D/M.84D
- o M.5
- o M.5/M.85
- o M.6A
- o M.6B/M.86B
- o M.9F/M.89F

The following messages or message sequences constitute valid track reports which follow the M.9A(AC=5) message. When the amplifying message as specified below is not received, the M.9A(AC=5) message shall be discarded. The M.9A (AC=5, STI=0) Emergency Alert shall also be discarded whenever an M.5, M.4A or M.4C translates to a J3.0 Reference Point message (i.e., M.5 Point Type = 2,4,5,6,8,9 or 10, M.4A Data Report Type = 3, or M.4C Switch = 2 or 3). The M.9A (AC=5) Alert shall also be discarded whenever an M.5 translates to a J3.1 Emergency Point message (i.e., M.5 Point Type = 7).

- o M.2/M.82
- o M.3/M.83
- o M.4A
- o M.4A/M.84A
- o M.4C/M.84C

APPENDIX C

TABLE C.5.1-M.9A. M.9A to Link 16 Message Translation Tree (Sheet 5 of 8)

NOTES (Continued)

- o M.4D/M.84D
 - o M.5
 - o M.6A
 - o M.6B/M.86B
 - o M.9A(AC=0, SI=1)
2. Refer to the specific Link 11/11B message to Link 16 message translation tree to determine the appropriate J series message to be forwarded.
3. When the addressed unit is the FJU, it shall, when appropriate, respond with M.5(PT=13) messages in an initial report sequence for all active interface units for which data are being forwarded.
4. The source, SPI, and Simulation Indicator data in the M.9A(AC=0) message from Link 11B and the track alert status data in the M.9A(AC=5 or 7) message must be retained in the FJU database for utilization in track reports. The controlling unit address in the M.9A(AC=6) message must also be retained for identity difference and change data order processing.
5. Receipt of a change to the M.9A(AC=1) CI value shall be retained in the FJU database for transmission of the appropriate J3.x message.
6. If the FJU is retaining ID data received in a previous M.9A(AC=1, CI=0) or J7.0(ACT = 1) message for the same TN, discard this message.

APPENDIX C

TABLE C.5.1-M.9A. M.9A to Link 16 Message Translation Tree (Sheet 7 of 8)

FORWARDING TRANSMIT REQUIREMENTS

1. A single J7.0 message shall be forwarded for the first M.9A(AC=1, CI=0) or M.9A(AC=7) message received. The FJU shall discard all identical messages received within 30 seconds after the initial message is received and forwarded.
2. A single J7.0 message shall be forwarded for each M.9A(AC=2) message received.
3. A single J7.1 message shall be forwarded for each M.9A(AC=3) message received.
4. A single J7.0 message shall be forwarded on the Surveillance NPG for each M.9A(AC=4) message received. If the TN in the M.9A(AC=4) message is being reported in M.6 or M.9F (Source = 1) messages, the J7.0 message may be transmitted on both the Surveillance and EW NPGs. The FJU shall discard all identical messages received within 30 seconds after the initial message is received and forwarded.
5. A single J7.0 message shall be forwarded for the first M.9A(AC=5) message received from a nonR² unit. When the first M.9A(AC=5) message is received from the R² unit, the appropriate alert indication in the Link 16 series message will be set. This alert indication will be retained until terminated by any unit. The FJU shall discard all identical messages received within 30 seconds after the initial message is received and forwarded.
6. A single J10.5 message shall be forwarded for each M.9A(AC=6) message received. The M.9A(AC=6) message identity data will not be used when forwarding surveillance data.
7. A single J7.5 message shall be forwarded for the first M.9A(AC=9) message received. The FJU shall discard all identical messages received within 30 seconds after the initial message is received and forwarded.

APPENDIX C

TABLE C.5.1-M.9A. M.9A to Link 16 Message Translation Tree (Sheet 8 of 8)

DATA RETENTION RULES

1. The SPI, Simulation Indicator, and Source data from the Link 11B M.9A(AC=0) message shall be retained in the FJU database for utilization in track reports.
2. The FJU shall retain the latest reported status of the Emergency and Force Tell Indicators for all tracks being forwarded.
3. The current controlling unit address received in an M.9A(AC=6, STI=0) shall be retained in the FJU database until control is terminated.
4. The FJU shall retain and update IFF/SIF information received in an M.9A(AC=9, ISAC=0) IFF/SIF Clear message received from any source.
5. The FJU shall retain ID data received in an M.9A(AC=1, CI=0) message from a nonR² unit for the track until the conflict has been resolved by the R² unit or an R² shift occurs.

APPENDIX C

TABLE C.5.1-M.9E. M.9E to Link 16 Message Translation Tree (Sheet 2 of 4)

NOTES

1. A voice call sign is sent on Link 11/11B only for Special Points and for controlled aircraft. An M.9E message with Voice Call Sign for a controlled aircraft is sent with a handover sequence or at variable rates depending upon circumstances. In the latter case, specific message sequences will not always be true. Therefore, the M.9E message data relating a Voice Call Sign which is not part of a handover sequence shall be included as a part of the next Controlling Unit Report forwarded from the same data source.

TABLE C.5.1-M.9E. M.9E to Link 16 Message Translation Tree (Sheet 4 of 4)

FORWARDING TRANSMIT REQUIREMENTS

1. A single J7.4 message shall be forwarded for each M.9E(AC=3 or 5) message received.
2. Only the specific M.9E message data that are received as a part of a handover sequence shall be forwarded in the related J9.0 or J10.3 message. If redundant transmission of the forwarded J9.0 or J10.3 message is required due to no machine receipt, the M.9E message data will be repeated. Forwarding a WILCO reply shall include only the M.9E message data that are reported as a part of the sequence following the M.10A (R/C=3) message.
3. An M.9E message reporting Voice Call Sign of a controlled aircraft which is not preceded by an M.10A message in the same transmit opportunity shall be forwarded as a part of the next Controlling Unit Report from the same source.
4. The voice call sign data contained in the M.9E message shall continue to be redundantly reported by the FJU with each J10.5 message forwarded until it is changed.

DATA RETENTION RULES

The FJU shall retain the latest reported Voice Call Sign.

TABLE C.5.1-M.9F-1. M.9F(0)/M.89F(0) to Link 16 Message Translation Tree
(Sheet 4 of 4)

FORWARDING TRANSMIT REQUIREMENTS

One J3.7 message and one J14.0 message or one J3.0 message, as appropriate, shall be transmitted for each M.9F(AC=0)/M.89F(AC=0) message received.

DATA RETENTION RULES

There are no Data Retention Rules associated with this message translation.

C-327

APPENDIX C

MIL-STD-6016B

APPENDIX C

TABLE C.5.1-M.9F-2. M.9F(1) to Link 16 Message Translation Tree (Sheet 2 of 4)

NOTES

1. When an M.9F(AC=1) is received with Switch = 1 for the first time, the FJU shall transmit a J7.7 message with Track Number, Subject = M.9F Track Number and Track Number, Associated = M.9F Related Track Number. The PU/RU that originated the M.9F(AC=1) shall be reported as TN, Source of the J7.7 message.
2. When an M.9F(AC=1) is received with Switch = 1 and Related Track Number has changed from the previous report, the FJU shall transmit a J7.7 (ACT = 1) terminating the previous association, followed by a J7.7 (ACT = 0) with Track Number, Subject = M.9F Track Number and Track Number, Associated = the new M.9F Related Track Number.
3. If an M.9F(AC=0)/M.89F(AC=0) message sequence was received immediately preceding the M.9F(AC=1), the J3.7C3 and J14.0C1 words shall be included in the J3.7 and J14.0 messages resulting from the M.9F(AC=0)/M.89F(AC=0). Otherwise, J3.7I/J3.7C3 and J14.0I/J14.0C1 word sequences shall be forwarded.
4. If an M.9F(AC=0)/M.89F(AC=0) message sequence was received immediately preceding the M.9F(AC=1) message, Related Track Number or X Dot and Y Dot shall be translated to TN, Related or Course and Speed in the J3.0 message resulting from the M.9F(AC=0)/M.89F(AC=0). Otherwise, a J3.0I/J3.0E0/J3.0C2 word sequence shall be forwarded.

APPENDIX C

TABLE C.5.1-M.10A. M.10A to Link 16 Message Translation Tree (Sheet 2 of 4)

NOTES

1. The FJU responds to each M.10A message, which is not discarded, with an M.10A CANTPRO message or an M.10A Machine Receipt (MR) message. The FJU shall originate an M.10A CANTPRO Response message only in response to an M.10A Original (R/C = 0) Handover message and then only in those cases shown in this table. The FJU shall respond with an M.10A MR message for those M.10A messages that are accepted for forwarding. The FJU then forwards a J9.0 message or a J10.3 message as appropriate on Link 16. If the FJU fails to receive a Link 16 MR or other reply, the data are forwarded a second time. If after two attempts a Link 16 MR or other reply is not received, the FJU shall send an M.10A CANTPRO message with CANTPRO AMP = 6 addressed to the originator of the M.10A Original (R/C = 0) message. If a Link 16 MR is not received for an M.10A, WILCO, CANTCO or CANTPRO reply message forwarded to Link 16, after two attempts to forward, the FJU takes no further action. If a reply is received from the addressee prior to the transmission of an M.10A MR message originated by the FJU, that reply may be transmitted instead of the FJU's M.10A MR message.

2. The FJU shall check to determine if the next message received from the PU/RU Source is for the specified track number. This check will terminate after three Link 11/11B message frame times.

3. The M.10A(Order=0 or 1, R/C=0) can only be followed by M.9E(AC=0 and/or 1). The M.10A(Order=0 or 1, R/C=3) can only be followed by M.9E(AC=2 and/or 4).

The M.10A(Order=6, R/C=0) can be followed by M.9E(AC=0, 1, 2, and/or 4). The M.10A(Order=6, R/C=3) cannot be followed by M.9E(AC=2 and/or 4).

The M.9E(AC=6) may be included following the M.10A, but is not forwarded.

When redundancy requirements are met and a reply has not been received for an Original (R/C = 0) Command message, the FJU shall reply on Link 11/11B with a CANTPRO (R/C = 7).
2. The J9.0 message with R/C = 1 shall be forwarded three times on Link 16. The redundant M.15(R/C=1) messages received will be discarded.

DATA RETENTION RULES

There are no Data Retention Rules associated with this message translation.

APPENDIX C

C.5.2 DATA ELEMENT TRANSLATION

C.5.2.1 GENERAL

This section provides the data element translations between Link 16 (J-Series) and Link 11/11B (M-Series) messages as required by the message translation process in section C.5.1. The data element translations depict actions required to generate a message for transmission on a data link based on information received on another data link. Information in this section is presented in tabular form according to the message being generated.

C.5.2.2 DETAILED DESCRIPTION OF CONTENTS

Messages that can be forwarded are depicted by data element translation tables. The J-Series data element translation tables are presented first, followed by the M-Series data element translation tables.

C.5.2.2.1 DATA ELEMENT TRANSLATION TABLES

These tables are a data element by a data element depiction of the message to be generated with an indication of the source of the data to be used in the data element.

C.5.2.2.1.1 LINK 16 DATA ELEMENT TRANSLATION TABLES

Data element translation tables for Link 16 are presented in the following format:

TABLE C.5.2-Jn.m. Jn.m Message Data Element Translation from Link 11/11B							
LINK 16			TRANSLATION		LINK 11/11B		
<u>WORD</u>	<u>DATA ELEMENT</u>	<u>VALUE</u>	<u>REQUIRED</u>	<u>MESSAGE</u>	<u>FIELD</u>	<u>VALUE</u>	<u>NOTES</u>

where;

LINK 16 WORD = The Link 16 word being generated.

APPENDIX C

LINK 16 DATA ELEMENT = List of all data elements contained in the Link 16 word being generated.

LINK 16 VALUE = Decimal value of the data element being generated unless otherwise noted.

TRANSLATION REQUIRED = An indication of the translation activity that is required to determine the correct value of the data element.

LINK 11/11B MESSAGE = Identifies the Link 11/11B message that contains the field corresponding to the data element.

LINK 11/11B FIELD = Identifies the field in the specified Link 11/11B message that corresponds to the data element.

LINK 11/11B VALUE = Decimal value of the field in the Link 11/11B message unless otherwise noted.

NOTES = Reference to amplifying information that must be taken into consideration to complete the data element translation process. A note number preceded by the letter "G" indicates a "General Note" that may be found in section C.5.3. A note number with no prefix indicates a note that is specifically stated within the translation table.

C.5.2.2.1.2 LINK 11/11B DATA ELEMENT TRANSLATION TABLES

Data element translation tables for Link 11/11B are presented in the following format:

TABLE C.5.2-M.x. M.x Message Data Element Translation from Link 16							
LINK 11/11B			LINK 16				
<u>MESSAGE</u>	<u>FIELD</u>	<u>VALUE</u>	<u>TRANSLATION REQUIRED</u>	<u>WORD</u>	<u>DATA ELEMENT</u>	<u>VALUE</u>	<u>NOTES</u>

where;

LINK 11/11B MESSAGE = The Link 11/11B message being generated.

APPENDIX C

LINK 11/11B FIELD = List of all fields contained in the Link 11/11B message being generated.

LINK 11/11B VALUE = Decimal value of the field being generated unless otherwise noted.

TRANSLATION REQUIRED = An indication of the translation activity that is required to determine the correct value of the field.

LINK 16 WORD = Identifies the Link 16 word that contains the data element corresponding to the field.

LINK 16 DATA ELEMENT = The data element in the identified Link 16 word that corresponds to the field.

LINK 16 VALUE = Decimal value of the data element in the Link 16 message unless otherwise noted.

NOTES = Reference to amplifying information that must be taken into consideration to complete the data element translation process. A note number preceded by the letter "G" indicates a "General Note" that may be found in section C.5.3. A note number with no prefix indicates a note that is specifically stated within the translation table.

C.5.2.2.2 DATA ELEMENT TRANSLATION TABLE ENTRIES

Within the translation tables the following entries are used:

AT = As translated.

NA = Not available in the other message series.

RX = All valid values as received.

CR = Conversion is required.

AR = As required by the formats and protocols of the link on which the message will be transmitted.

= = Data element and bit field equivalence.

APPENDIX C

C.5.2.3 DEFAULT CONDITIONS

When the message required for data element translation has not been received, the default condition will be No Statement if defined, or 0.

TABLE C.5.2-J.x. J-Series Message Data Element Translation from Link 11/11B

APPENDIX C

TABLE C.5.2-J2.0. J2.0 Message Data Element Translation from Link 11/11B
(Sheet 3 of 3)

NOTES

1. All M.1 and/or M.5(PT=13) messages translated relate to C² units; therefore, the J2.0 Command and Control Indicator is arbitrarily set to 1 when translating these messages. NonC² units, tracks, and points will be translated to a J3.x series message.

2. Site is determined from M.5 Point = 13, Point Amplify as follows:

Link 16	Link 11/11B
SITE	POINT AMPLIFY
0 - NO STATEMENT	0 - NO STATEMENT
1 - FPU/FRU	1 - FPU/FRU
2 - PU	2 - PU
	6 - APU
3 - RU	3 - RU

3. The Delta Latitude/Longitude is applied to a common Data Link Reference Point to determine Latitude and Longitude of the SCC. The Latitude and Longitude converted from the M.1 message are forwarded as unit position when the Reference/Position Indicator = 0. Otherwise, unit position will be converted from the M.5 message.

4. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with least significant digit greater than 3 not being used. The Mode I field of the J2.0C1 IFF Codes are in the order A4, A2, A1, B2, B1, with the most significant bit A4 in bit position 12. The Mode I field of the M.11D IFF Codes are in the order A4, A2, A1, B4, B2, B1 (B4 is never set since the second digit never exceeds 3) and the most significant bit A4 is bit position 23.

APPENDIX C

TABLE C.5.2-J3.0-1. J3.0 Message Data Element Translation from the M.4A/M.84A Message (Sheet 4 of 7)

NOTES

1. The J3.0 message is only translated from an M.4A message when Data Report Type is 3.
2. If data are forwarded when the M.4B is not received, the Time Function shall be forwarded as No Statement. The Time Function is determined from the M.4B Time Switch and M.84A ASW Point Type fields as follows:

Link 16	Link 11/11B	
TIME FUNCTION	TIME SWITCH	ASW POINT TYPE
0 - NO STATEMENT	0 - NO STATEMENT	All
1 - ACTIVATION TIME	1 - GMT OF ACQUISITION/ OBSERVATION/ ESTABLISHMENT/ COMMENCEMENT	12 or 13
5 - TIME POINT ESTABLISHED	1 - GMT OF ACQUISITION/ OBSERVATION/ ESTABLISHMENT/ COMMENCEMENT	All except 12 or 13

Both the Time of Activation and the Time of Deactivation shall be forwarded for NOTACK Areas or Friendly Weapon Danger Areas (FWDAs) (ASW Point Type 12 or 13). Two J3.0 messages shall be transmitted sequentially to report the times. The first J3.0 message reports the Activation Time as determined from the time given in the M.4B. If no M.4B is received, the NOTACK or FWDA message is not forwarded. The second J3.0 message reports the Deactivation Time as determined by translating the M.84A NOTACK or FWDA Duration value and adding the resulting Hours and Minutes to the Activation Time.

The J3.0 Deactivation Time (Time Function = 2) is determined by adding the translated M.84A NOTACK Duration value to the Activation Time for the NOTACK. The NOTACK Duration translation is as follows:

APPENDIX C

TABLE C.5.2-J3.0-1. J3.0 Message Data Element Translation from the M.4A/M.84A Message (Sheet 5 of 7)

NOTES (Continued)

2. (Continued)

Link 16		Link 11/11B
HRUR	MINUTE	NOTACK DURATION
0	30	1 - 30 MINUTES
1	0	0 - 1 HOUR
1	30	2 - 1 HOUR 30 MINUTES
2	0	3 - 2 HOURS

3. The Point Type (PT) and Point Amplification fields are determined from the M.84A ASW Point Type field as follows:

Link 16		Link 11/11B
POINT TYPE	POINT AMPLIFICATION	ASW POINT TYPE
7 - ASW	0 - NO STATEMENT	0 - NO STATEMENT
	1 - SINKER	7 - ASW SUBSURFACE STATION
	2 - BRIEF CONTACT	14-63 - UNDEFINED
	3 - SEARCH CENTER (ASW)	1 - SINKER
	4 - ESTIMATED POSITION (EP)	2 - BRIEF CONTACT
	5 - FIX (ASW)	3 - ASW SEARCH CENTER
	6 - NOTACK AREA	
	10 - SONOBUOY PATTERN REFERENCE POSITION	11 - ESTIMATED POSITION
	13 - FRIENDLY WEAPON DANGER AREA (FWDA)	10 - FIX
8 - ASW, 1	0 - CHARTED WRECK	12 - NOTACK AREA
	1 - BOTTOMED NONSUBMARINE	4 - SONOBUOY PATTERN REFERENCE POSITION
	2 - ASW STATION	13 - FRIENDLY WEAPON DANGER AREA (FWDA)
		6 - CHARTED WRECK
		9 - BOTTOMED NONSUBMARINE
		5 - ASW STATION

4. The J3.0I Minute field is determined from the M.4B Minutes and Time Switch fields as follows:

Link 16	Link 11/11B	
MINUTE	TIME SWITCH	MINUTES
0-59 - 0 THROUGH 59	1	0-59 - 0 THROUGH 59 MINUTES
63 - NO STATEMENT	0, 2, 3	Any

APPENDIX C

TABLE C.5.2-J3.0-1. J3.0 Message Data Element Translation from the M.4A/M.84A Message (Sheet 6 of 7)

NOTES (Continued)

5. The J3.0I Hour field is determined from the M.4B Hours and Time Switch fields as follows:

Link 16	Link 11/11B	
HOUR	TIME SWITCH	HOURS
0-23 (0-23 HOURS)	1	0-23 - 0 THROUGH 23 HOURS
31 - NO STATEMENT	0, 2, 3	ANY

6. If M.84A ASW Point Type = 12 (NOTACK Area), J3.0C2 Square/Circle Switch shall be set to value 2, and Area Major Axis and Area Minor Axis shall be equal, and determined from M.84A NOTACK Radius as follows:

Link 16	Link 11/11B	
AREA MAJOR AXIS	AREA MINOR AXIS	NOTACK RADIUS
2 (8 dm)	2 (8 dm)	1 - 5 DM
3 (12 dm)	3 (12 dm)	0 - 10 DM
4 (16 dm)	4 (16 dm)	2 - 15 DM
5 (20 dm)	5 (20 dm)	3 - 20 DM

Other than the above case, J3.0C2 Square/Circle Switch, Area Major Axis, and Area Minor Axis shall be set to No Statement.

7. The Speed field is determined as follows:

Link 16	Link 11/11B
SPEED	SPEED
0-63 (0-126 Data Miles/Hour)	0-126 - 0 THROUGH 126 DM/HR
2047 - NO STATEMENT	127 - NO STATEMENT

Link 11/11B speed is in 1 dm/h increments, and Link 16 speed is in 2dm/h increments. Translate Link 11/11B to the nearest Link 16 increment, rounded up. For example, Link 11/11B speed of 33dm/h shall translate to 34 dm/h in Link 16 vice 32 dm/h.

8. The J3.0C2 Course field is determined from the M.84A Course/Bearing and Course/Bearing Indicator (CBI) fields as follows:

APPENDIX C

TABLE C.5.2-J3.0-1. J3.0 Message Data Element Translation from the M.4A/M.84A Message (Sheet 7 of 7)

NOTES (Continued)

8. (Continued)

<u>Link 16</u>	<u>Link 11/11B</u>	
<u>COURSE</u>	<u>COURSE/BEARING</u>	<u>COURSE/BEARING</u>
<u>INDICATOR</u>		
0-359 - 0 THROUGH 359 DEGREES	1	0-255 (0-358 19/32 Degrees)
511 - NO STATEMENT	0	Any

Link 11/11B Course/Bearing is in 360/256 degree increments, and Link 16 Course is in 1 degree increments. Translate Link 11/11B to the nearest Link 16 increment (.5 rounded up). For example, Link 11/11B Course/Bearing of 21 16/32 degrees shall translate to 22 degrees in Link 16 vice 21 degrees.

9. Since the M.84A reports a NOTACK Area with only a radius, the area will be a circle and the Axis Orientation field in the J3.0C2 word shall be set to 0 indicating True North.

10. When forwarding a NOTACK Area or FWDA, the J3.0 Point/Line/Area Descriptor, 1 field shall be set to value 1 (Single Point Area). Otherwise it shall be set to value 0 (Point).

APPENDIX C

TABLE C.5.2-J3.0-2. J3.0 Message Data Element Translation from the M.4C/M.84C Message (Sheet 4 of 6)

NOTES

1. The J3.0 message is only translated from an M.4C message when the Switch value is 2 or 3. When the M.4C Switch value is 0 the J5.4 message is forwarded.

2. If the Time Remaining is received in an M.84C message, the J3.0 message will be forwarded with Time Function = 2 (Deactivation Time); otherwise, it will be forwarded with Time Function, Minute, and Hour all set to No Statement. Deactivation Time is determined by adding the translated M.84C Time Remaining value to the current time. The Time Remaining translation is as follows:

Link 16		Link 11/11B
HOURL	MINUTE	TIME REMAINING
0	0	0(0 MINUTES)
	1	1(< 2 MINUTES)
	4	2(< 5 MINUTES)
	9	3(< 10 MINUTES)
	14	4(< 15 MINUTES)
	19	5(< 20 MINUTES)
	24	6(< 25 MINUTES)
	29	7(< 30 MINUTES)
	59	8(< 1 HOUR)
1	59	9(< 2 HOURS)
2		10(< 3 HOURS)
3		11(< 4 HOURS)
4		12(< 5 HOURS)
9		13(< 10 HOURS)
10		14(= OR > 10 HOURS)
31	63	15(NO STATEMENT)

3. The Point Amplification field is determined from the M.4C Switch field as follows:

Link 16	Link 11/11B
POINT AMPLIFICATION	SWITCH
9 - SONOBUOY POSITION	2 - SONOBUOY POSITION
10 - SONOBUOY PATTERN REFERENCE POSITION	3 - REFERENCE SONOBUOY POSITION

APPENDIX C

TABLE C.5.2-J3.0-2. J3.0 Message Data Element Translation from the M.4C/M.84C Message (Sheet 5 of 6)

NOTES (Continued)

4. The M.84C Channel Amplify field (7 bits) reports channel numbers 32 through 99. The Channel Number field (5 bits) reports channel numbers 1 through 31. If M.84C Channel Number is nonzero, J3.0C3 Channel Number, Sonobuoy RF, shall equate to M.84C Channel Number in accordance with General Note 15. If M.84C Channel Number = 0, the J3.0C3 Channel Number, Sonobuoy RF, shall equate to M.84C Channel Amplify if Channel Amplify = 32-99; otherwise, the J3.0C3 Channel Number, Sonobuoy RF field shall be set to value 0.

5. The Sonobuoy Type field and Sonobuoy Type, 1 field are determined from the M.84C Type, Type, 1 and Sonobuoy Switch fields as follows:

Link 16	Link 11/11B	
SONOBUOY TYPE	SWITCH	TYPE

TABLE C.5.2-J3.0-3. J3.0 Message Data Element Translation from the M.5/M.85
Message (Sheet 5 of 8)

NOTES

1. Slaved Indicator is determined from Reference as follows:

Link 16	Link 11/11B
SLAVED INDICATOR	REFERENCE
0	0
1	1
	2

2. When the M.85 Switch field value = 0, the Time Function field is set to 0. When the M.85 Switch field value = 1, the Time Function field is determined from the M.85 Time Switch field as follows:

Link 16	Link 11/11B
TIME FUNCTION	TIME SWITCH
0 - NO STATEMENT	1 - INDICATES THE GMT OF THE OBSERVATION/INFORMATION ON WHICH THE X AND Y IN THE M.5 IS ESTABLISHED.
5 - TIME POINT ESTABLISHED	0 - INDICATES THE GMT OF THE INITIAL OBSERVATION/INFORMATION ON WHICH THE ORIGINAL X AND Y IN THE ORIGINAL M.5 WAS ESTABLISHED.

3. Point Type and Point Amplification are determined from Point and Point Amplify as follows:

Link 16	POINT	Link 11/11B	POINT	POINT AMPLIFY
POINT TYPE	AMPLIFICATION	POINT		
0 - HAZARD	0 - NO STATEMENT	2 - HAZARD	0 - NO STATEMENT	
	1 - NAVIGATION		1 - NAVIGATION	
	2 - MINE		2 - MINE	
	3 - IMPACT POINT		3 - IMPACT POINT	
	4 - GROUND ZERO		4 - GROUND ZERO	
	5 - AIM/WEAPON ENTRY POINT		5 - AIM/WEAPON ENTRY POINT	
	6 - MISSILE LAUNCH POINT		6 - MISSILE LAUNCH POINT	
	7 - ELECTRONIC ATTACK (EA) DECOY		7 - EA DECOY

4. When Switch = 0, the Link 16 Minute and Hour fields are set to No Statement. When Switch = 1, the Link 11/11B and Link 16 Minute and Hour fields are equivalent.

5. If M.85 Reference = 0, the J3.0E0 is translated. If M.85 Reference = 1 or 2, the J3.0C1 is translated. The FJU shall determine the difference in Latitude and Longitude between the position of the M.85 Related Track Number/Track Number (TN), if available from previous M.1, M.2, M.3, M.4, or M.5 messages, and the position of the slaved point as reported in the M.5 message. The position of the Related Track Number shall be extrapolated to the time in the M.85 message if Time Switch = 1, or to the time of receipt of the M.5/M.85 message if Time Switch = 0 or no M.85(SW=0) message is received. The difference shall be reported as Delta Latitude, 0.0313 Minute 1 and Delta Longitude, 0.0313 Minute 1 in the J3.0C1 message. If the position of Related TN is not available, the M.5/M.85 message with Reference = 1 or 2 shall not be forwarded.

6. When Switch = 0, or when Switch = 1 and Height/Depth Switch = 1, Altitude, 100 Ft 1 shall be forwarded as No Statement. When Switch = 1 and

APPENDIX C

TABLE C.5.2-J3.0-3. J3.0 Message Data Element Translation from the M.5/M.85 Message (Sheet 8 of 8)

NOTES (Continued)

6. (Continued)

Height/Depth Switch = 0, Altitude, 100 Ft 1 is derived from Height/Depth in accordance with General Note 10.

7. When Switch = 1, Speed and Course are forwarded as No Statement. When Switch = 0, Speed and Course are derived from X Dot and Y Dot in accordance with General Note 8.

8. When Reference = 0 or 2, J3.0C2 Track Number, Related shall be set to No Statement, if the J3.0C2 Word is translated. When Reference = 1, J3.0C2 Track Number, Related is translated from M.85 Related Track Number. The J3.0C4 word shall only be translated when Reference = 2.

APPENDIX C

TABLE C.5.2-J3.0-4. J3.0 Message Data Element Translation from the M.9F(0)/M.89F(0) Message (Sheet 4 of 5)

NOTES

1. The Time Function field is determined from the M.89F(AC=0) Minutes and Hours fields as follows:

Link 16	Link 11/11B	
TIME FUNCTION	HOURS	MINUTES
0 - NO STATEMENT	31 - NO STATEMENT	63 - NO STATEMENT
5 - TIME POINT ESTABLISHED	0000-2359 - GMT of the establishment/update of the area of probability	0000-2359 - GMT of the establishment/update of the area of probability

2. The Point/Line/Area Descriptor, 1 field is determined from the entire M.9F(AC=0)/M.89F(AC=0)/M.9F(AC=1) message sequence. When this message sequence is received, the Point/Line/Area Descriptor, 1 shall be set to 1 (Single Point Area).

3. The Point Type and the Point Amplification fields are determined from the M.89F(AC=0) Category/Platform and Source fields. When the Category/Platform = 3 (Subsurface) and Source is other than 1 (EW Bearings or Fix) or 2 (Intelligence), the Link 16 message is transmitted with the Point Type code for ASW (7), as well as the Point Amplification code for Area of Probability (12). When Source = 1, for any Category/Platform, the M.9F/M.89F is forwarded in J3.7 and J14.0 messages. When Source = 2, for any Category/Platform, the M.9F/M.89F is forwarded in a J3.7 message.

4. When the M.9F(AC=1) Switch = 1, and an M.9F(AC=1) with Switch = 0 has not been previously received, Speed and Course are forwarded as No Statement. When the M.9F(AC=1) Switch = 0, or an M.9F(AC=1) with Switch = 0 has been previously received, Speed and Course are derived from X Dot, Y Dot, and Scale Indicator in accordance with General Note 8.

5. The Square/Circle Switch field is determined as follows:

APPENDIX C

APPENDIX C

TABLE C.5.2-J3.1. J3.1 Message Data Element Translation from Link 11/11B
(Sheet 3 of 4)

NOTES

1. The Emergency Type field is determined from Point value = 7 and the Point Amplify fields as follows:

Link 16	Link 11/11B
EMERGENCY TYPE	POINT AMPLIFY
0 - NO STATEMENT/OTHER	0 - NO STATEMENT
	4-7 - UNDEFINED
1 - DOWN AIRCRAFT	1 - DOWN A/C/PU DITCHING
2 - MAN IN WATER	2 - MAN-IN-WATER/PU BAILOUT
5 - DISTRESSED VESSEL	3 - DISTRESSED VESSEL

2. Track Number, Previously Reported is provided if an M.9B(AC=6) message has been received with Track Number One equal to Track Number, Reference of the J3.1I word. In this case the Track Number, Previously Reported, in the J3.1I word, is set to the value received in the M.9B(AC=6) Track Number Two field. If an M.9B(AC=6) message has not been received, then the Track Number, Previously Reported, in the J3.1I word, is set to No Statement.

3. When the M.85 Switch = 1, the Time Function field is determined from the M.85 Time Switch field as follows:

Link 16	Link 11/11B
TIME FUNCTION	TIME SWITCH
0 - NO STATEMENT	1 - INDICATES THE GMT OF THE OBSERVATION/INFORMATION ON WHICH THE X AND Y IN THE M.5 IS ESTABLISHED.
5 - TIME POINT ESTABLISHED	0 - INDICATES THE GMT OF THE INITIAL OBSERVATION/INFORMATION ON WHICH THE ORIGINAL X AND Y IN THE ORIGINAL M.5 WAS ESTABLISHED.

4. Time is received in the M.85 message when Switch = 1.

5. A J3.1C1 word is forwarded if IFF/SIF data are received in an M.11D message for the M.5 message Track Number.

APPENDIX C

TABLE C.5.2-J3.1. J3.1 Message Data Element Translation from Link 11/11B
(Sheet 4 of 4)

NOTES (Continued)

6. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with least significant digit greater than 3 not being used. The Mode I field of the J3.1C1 IFF Codes are in the order A4, A2, A1, B2, B1, with the most significant bit A4 in bit position 12. The Mode I field of the M.11D IFF Codes are in the order A4, A2, A1, B4, B2, B1 (B4 is never set since the second digit never exceeds 3) and the most significant bit A4 is bit position 23.

TABLE C.5.2-J3.2. J3.2 Message Data Element Translation from Link 11/11B
(Sheet 4 of 4)

NOTES

1. The Strength field is determined from the Size field as follows:

Link 16	Link 11/11B
STRENGTH	SIZE
0 - NO STATEMENT	0 - NO STATEMENT
1 - 1 UNIT	1 - SINGLE TARGET
13 - 2 THROUGH 7 (FEW) UNITS	2 - FEW (2 TO 7) TARGETS
14 - GREATER THAN 7 (MANY) UNITS	3 - MANY (8 OR MORE) TARGETS

2. The Scale Indicator field determines the scaling of the Height field.

3. Not Used.

4. Track Quality is reported with values 0-7 on Link 11/11B. These values will be translated to identical numerical values for Link 16.

5. The Passive/Active Indicator does not exist on Link 11/11B. The normal for Link 11/11B is considered to be active sensor derived information; therefore, forwarded data will be reported with value = 1 in this field.

6. Time is received in the M.82 message only for nonreal-time tracks. No Statement will be forwarded for Minute and Hour for real-time tracks. X Dot and Y Dot may be received for both real-time and nonreal-time tracks. No Statement will be forwarded for Course and Speed if an M.82 message has not been received with X Dot and Y Dot.

7. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with the least significant digit greater than 3 not being used. The Mode I field of the J3.2C1 IFF Codes are in the order A4, A2, A1, B2, B1, with the most significant bit A4 in bit position 12. The Mode I field of the M11D IFF Codes are in the order A4, A2, A1, B4, B2, B1 (B4 is never set since the second digit never exceeds 3) and the most significant bit A4 is bit position 23.

TABLE C.5.2-J3.4. J3.4 Message Data Element Translation from Link 11/11B
(Sheet 4 of 10)

NOTES

1. The J3.4I Data Report Type field shall be determined as follows:

Link 16	Link 11/11B		
DATA REPORT TYPE	DATA REPORT TYPE	DEPTH INDICATOR	DEPTH
0 - SUBSURFACE TRACK	0 - SUBSURFACE TRACK	0	Any
1 - SURFACED SUBMARINE	1 - SURFACED SUBMARINE	1	Other than 1
2 - SNORKELING SUBMARINE	0 - SUBSURFACE TRACK	0 or 1	Any
4 - DATUM	2 - DATUM	1	1 - SNORKELING
		0 or 1	Any

2. The J3.4I Identity field is determined as follows:

Link 16	Link 11/11B
IDENTITY	IDENTITY
0 - PENDING	0 - NO STATEMENT/PENDING
1 - UNKNOWN	3 - UNKNOWN
3 - FRIEND	1 - FRIEND
6 - HOSTILE	2 - HOSTILE

3. The Confidence Level field is determined from the M.84A Classification, Classification Amplification, and Possible Submarine fields as follows:

Link 16	Link 11/11B		
CONFIDENCE LEVEL	CLASSIFICATION	CLASSIFICATION AMPLIFICATION	POSSIBLE SUBMARINE
0 - NO STATEMENT	0 - NO STATEMENT	0 - NO STATEMENT	(NOT INTERPRETED)
2 - POSSIBLE SUBMARINE LOW ONE	7 - UNDEFINED 1 - POSSIBLE SUBMARINE	ANY	0 - NO STATEMENT
3 - POSSIBLE SUBMARINE LOW TWO			1 - POSSIBLE SUBMARINE 1 2 - POSSIBLE SUBMARINE 2 5-7 - UNDEFINED

APPENDIX C

TABLE C.5.2-J3.4. J3.4 Message Data Element Translation from Link 11/11B
(Sheet 6 of 10)

NOTES (Continued)

4. (Continued)

<u>Link 16</u>	<u>Link 11/11B</u>		
<u>SUBSURFACE</u>			
<u>(MARITIME)</u>			
<u>PLATFORM</u>	<u>CLASSIFICATION</u>	<u>CLASSIFICATION</u>	<u>MISSILE</u>
		<u>AMPLIFICATION</u>	<u>CAPABILITY</u>
27		6	NA
29	0	0	3 or 4
	1-3, 5	Any	3 or 4

5. The Subsurface (Maritime) Platform Activity is determined from the M.4B Mission field as follows:

<u>Link 16</u>	<u>Link 11/11B</u>
<u>SUBSURFACE (MARITIME) PLATFORM</u>	<u>MISSION</u>
<u>ACTIVITY</u>	
0 - NO STATEMENT	0 - NO STATEMENT
	8 - INTRUDER
	11-15 - UNDEFINED
1 - RECONNAISSANCE	3 - RECONNAISSANCE
5 - ANTISURFACE WARFARE	1 - ANTISHIPPING
8 - SEARCH AND RESCUE (SAR)	6 - SPECIAL/SAR
9 - ESCORTING	7 - ESCORT
10 - MINELAYING	4 - MINE LAYING
11 - TRANSITING	5 - TRANSITING
18 - ANTISUBMARINE WARFARE (ASW)	2 - ANTISUBMARINE

6. The Identity Difference Indicator does not relate to the Link 11/11B M.9A(AC=1) Information Difference Report message.

7. The J3.4E0 Course field is determined from the M.84A Course/Bearing and Course/Bearing Indicator (CBI) fields as follows:

<u>Link 16</u>	<u>Link 11/11B</u>	
	<u>COURSE/BEARING</u>	
<u>COURSE</u>	<u>INDICATOR</u>	<u>COURSE/BEARING</u>
0-359 - 0 THROUGH 359	1	0-255 (0-358 19/32
DEGREES		degrees)
511 - NO STATEMENT	0	(NOT INTERPRETED)

Link 11/11B Course/Bearing is in 360/256 degree increments, and Link 16 Course is in 1 degree increments. Translate Link 11/11B to the nearest Link

APPENDIX C

TABLE C.5.2-J3.4. J3.4 Message Data Element Translation from Link 11/11B
(Sheet 7 of 10)

NOTES (Continued)

7. (Continued)

16 Increment (.5 rounded up). For example, Link 11/11B Course/Bearing of 21 16/32 degrees shall translate to 22 degrees in Link 16 vice 21 degrees.

8. Link 11/11B Speed is in 1 data mile per hour increments and Link 16 Speed is in 0.5 data mile per hour increments. Therefore, the Link 11/11B Speed shall translate to an identical speed in Link 16. Value 127 (No Statement) shall translate to value 511 (No Statement).

9. The Depth Contact field is determined from the M.84A Depth and Depth Indicator fields as follows:

Link 16	Link 11/11B
DEPTH CONTACT	DEPTH
0 - NO STATEMENT	0 - UNKNOWN/NO STATEMENT
	11-63 - UNDEFINED
1 - ESTIMATED SHALLOW	1 - SNORKELING
	2 - ESTIMATED SHALLOW
2 - ABOVE LAYER	4 - ABOVE FIRST LAYER
3 - BELOW LAYER	5 - BELOW FIRST LAYER
	6 - BETWEEN FIRST AND SECOND LAYER
	7 - BETWEEN SECOND AND THIRD LAYERS
	8 - BELOW BOTTOM LAYER
4 - ESTIMATED DEEP	9 - ESTIMATED DEEP
5 - BOTTOMED	10 - BOTTOMED
7 - PERISCOPE DEPTH	3 - PERISCOPE DEPTH

10. The Sensor field is determined as follows:

Link 16	Link 11/11B
SENSOR	SENSOR
0 - NO STATEMENT/UNKNOWN	0 - NO STATEMENT
	33-57 - UNDEFINED
1 - ACTIVE SONAR	1 - ACTIVE SONAR
	3 - SHIP VARIABLE DEPTH SONAR- ACTIVE
	6 - SUBMARINE ACTIVE SONAR
	8 - HELO ACTIVE SONAR

27 - SHIP SONAR	5 - SHIP SONAR (VDS AND HULL MOUNTED)

11. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with least significant digit greater than 3 not being used. The Mode I field of the J3.4C1 IFF Codes are in the order A4, A2, A1, B2, B1, with the most significant bit A4 in bit position 12. The Mode I field of the M.11D IFF Codes are in the order A4,

APPENDIX C

TABLE C.5.2-J3.4. J3.4 Message Data Element Translation from Link 11/11B
(Sheet 9 of 10)

NOTES (Continued)

11. (Continued)

A2, A1, B4, B2, B1 (B4 is never set since the second digit never exceeds 3) and the most significant bit A4 is bit position 23.

12. The J3.4C1 Time Function, ASW field is determined from the M.4A Nonreal-Time (NRT) Indicator and the M.4B Time Switch fields as follows:

Link 16	Link 11/11B	
TIME FUNCTION, ASW	NONREAL-TIME INDICATOR	TIME SWITCH
0 - NO STATEMENT	0 or 1	0 - NO STATEMENT
1 - TIME CONTACT FIRST ACQUIRED/TIME DATUM ESTABLISHED	0	1 - GMT OF ACQUISITION/ OBSERVATION/ ESTABLISHMENT/ COMMENCEMENT
2 - TIME OF CURRENT POSITIONAL DATA	1	1 - GMT OF ACQUISITION/ OBSERVATION/ ESTABLISHMENT/ COMMENCEMENT
3 - TIME CONTACT LOST	0 or 1	3 - GMT OF TIME LOST

13. The J3.4I Launch Capability is determined from the M4.B Missile Capability as follows:

Link 16	Link 11/11B
LAUNCH CAPABILITY	MISSILE CAPABILITY
0 - NO STATEMENT	0 - NO STATEMENT
1 - MAY LAUNCH MISSILE WHILE SUBMERGED	1 - WITH BALLISTIC MISSILE CAPABILITY. MAY LAUNCH MISSILE WHILE SUBMERGED.
	OR
	3 - WITH CRUISE MISSILE CAPABILITY. MAY LAUNCH MISSILE WHILE SUBMERGED.
2 - MUST BE SURFACED TO LAUNCH MISSILE	2 - WITH BALLISTIC MISSILE CAPABILITY. MUST BE SURFACED TO LAUNCH MISSILE.

TABLE C.5.2-J3.5. J3.5 Message Data Element Translation from Link 11/11B
(Sheet 4 of 5)

NOTES

1. There are only a few Point/Point Amplify values that are translated from Link 11/11B to the J3.5 message. The rest of these are translated into a J3.0, J3.1, or J3.7 message. The translation to the J3.5 message is as follows:

Link 16		Link 11/11B	
IDENTITY	LAND (GROUND) PLATFORM	POINT	POINT AMPLIFY
3 - FRIEND	3 - COMMAND/ CONTROL/ COMMAND AND CONTROL CENTER	14 - SUPPORT UNIT (SU)	0 - NO STATEMENT
	7 - AIRFIELD/ AIRBASE		2 - AIR BASE
	33 - RADAR SITE	1 - RADAR	0 - NO STATEMENT
	40 - SURFACE-TO- AIR MISSILE (SAM) SITE	14 - SUPPORT UNIT (SU)	3 - SAM SITE
	41 - MARITIME HEADQUARTERS		1 - MHQ
	42 - AIR SUPPORT RADAR TEAM (ASRT)		4 - ASRT
	43 - DIRECT AIR SUPPORT CENTER (DASC)		5 - DASC
	44 - FORWARD AIR CONTROL PARTY (FACP)		6 - FACP
	22 - AIR DEFENSE ARTILLERY		7 - ADA/BOC/TDS
	0 - NO STATEMENT	15 - ENEMY POINT	0 - NO STATEMENT
	1 - TROOP CONCENTRATION/ UNIT		1 - TROOP CONCENTRATION
	7 - AIRFIELD/ AIRBASE		2 - AIR BASE
	13 - CONVOY		5 - CONVOY
6 - HOSTILE	18 - TRAIN		6 - RAIL
	21 - FIELD ARTILLERY		4 - ARTILLERY
	26 - BRIDGE		7 - BRIDGE

APPENDIX C

TABLE C.5.2-J3.5. J3.5 Message Data Element Translation from Link 11/11B
(Sheet 5 of 5)

NOTES (Continued)

1. (Continued)

Link 16		Link 11/11B	
IDENTITY	LAND (GROUND) PLATFORM	POINT	POINT AMPLIFY
	40 - SURFACE-TO- AIR MISSILE (SAM) SITE		3 - SAM SITE

2. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with least significant digit greater than 3 not being used. The Mode I field of the J3.5C1 IFF Codes are in the order A4, A2, A1, B2, B1, with the most significant bit A4 in bit position 12. The Mode I field of the M.11D IFF Codes are in the order A4, A2, A1, B4, B2, B1 (B4 is never set since the second digit never exceeds 3) and the most significant bit A4 is bit position 23.

3. When the M.85 Switch field = 1, the Time Function field is determined from the M.85 Time Switch field as follows:

Link 16		Link 11/11B	
TIME FUNCTION		TIME SWITCH	
0 - NO STATEMENT		1 - OBSERVATION/INFORMATION	
5 - TIME POINT ESTABLISHED		0 - INITIAL OBSERVATION/ INFORMATION

C-435

APPENDIX C

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-J3.7-2. J3.7 Message Data Element Translation from the M.6A Message (Sheet 4 of 5)

NOTES

1. The M.6A only describes EA LOBs. Therefore, Fix or Bearing Descriptor is always set to 4 (Bearing EA).

2. Identity is determined from the M.6A Threat Evaluation field as follows:

Link 16	Link 11/11B
IDENTITY	THREAT EVALUATION
0 - PENDING	0 - PENDING
1 - UNKNOWN	1 - UNKNOWN
3 - FRIEND	2 - NONTHREAT/FRIEND
5 - SUSPECT	3 - THREAT

3. Hour, Minute, and Second are determined from the M.6A Time Stale field by subtracting the value in the Time Stale field from the estimated time of transmission of the J3.7 message, rounding to the nearest second. Time Stale = 127, No Statement, shall be translated to Hour = 31, No Statement, Minute = 63, No Statement, and Second = 63, No Statement.

4. The M.6A message only describes EA LOBs relative to a TN of Origin. Therefore, Bearing Origin in the J3.7 message is set to 0.

5. Bearing Accuracy is determined as follows:

Link 16	Link 11/11B
BEARING ACCURACY (NO STATEMENT)	BEARING ACCURACY
0(NO STATEMENT)	3(> = 5 DEGREES/NO STATEMENT)
3(<= 5.0 DEGREES)	2(< 5 DEGREES)
6(<= 2.0 DEGREES)	1(< 2 DEGREES)
7(<= 1.0 DEGREES)	0(< 1 DEGREE)

6. When Action Value = 1 and Switch = 1, the M.6A Elevation equates to the J3.7 Elevation Angle, except that M.6A Elevation = 512 shall be converted to J3.7 Elevation Angle = 511, because J3.7 Elevation Angle = 512 means No Statement, but M.6A Elevation = 512 means $\pi/2$.

APPENDIX C

TABLE C.5.2-J3.7-2. J3.7 Message Data Element Translation from the M.6A Message (Sheet 5 of 5)

NOTES (Continued)

7. The J3.7 Environment/Category (E/C) and Platform fields are determined from the M.6A Platform field as follows:

Link 16		Link 11/11B
ENVIRONMENT/CATEGORY	PLATFORM TYPE	PLATFORM
0 - NO STATEMENT/ UNKNOWN	0 - NO STATEMENT	0 - NO STATEMENT
ENVIRONMENT/CATEGORY	AIR PLATFORM	PLATFORM
2 - AIR	0 - NO STATEMENT	2 - AIRBORNE (AIRCRAFT EXCLUDING MISSILE)
	13 - MISSILE	1 - MISSILE
	36 - MISSILE CONTROL UNIT	6 - MISSILE CONTROL UNIT (AIRBORNE)
ENVIRONMENT/CATEGORY	SURFACE (MARITIME) PLATFORM	PLATFORM
3 - SURFACE (MARITIME)	0 - NO STATEMENT	3 - SURFACE
	33 - MISSILE CONTROL UNIT	7 - MISSILE CONTROL UNIT (SURFACE/ SUBSURFACE)
ENVIRONMENT/CATEGORY	SUBSURFACE (MARITIME) PLATFORM	PLATFORM
4 - SUBSURFACE (MARITIME)	0 - NO STATEMENT	4 - SUBSURFACE (SUBMARINE)
ENVIRONMENT/CATEGORY	LAND (GROUND) PLATFORM	PLATFORM
5 - LAND (GROUND)	0 - NO STATEMENT	5 - LAND

8. If the position of the M.6A TN of Origin is held by the FJU, the position may be translated and forwarded as Latitude and Longitude in the J3.7C2 word. (This position may be obtained from a previously reported M.1, M.2, M.3, M.4, and/or M.5 message.) Otherwise, Latitude and Longitude shall be forwarded as No Statement.

MIL-STD-6016B

		<u>FIELD</u>	<u>VALUE</u>	<u>NOTES</u>

APPENDIX C

TABLE C.5.2-J3.7-3. J3.7 Message Data Element Translation from the M.6B/M.86B Message (Sheet 5 of 7)

NOTES

1. Fix or Bearing Descriptor is determined from the M.6B Fix or Bearing (F/B), M.86B Report Source (RS), and the M.86B Bearing Indicator fields, as follows:

Link 16	Link 11/11B		
FIX OR BEARING DESCRIPTOR	FIX OR BEARING	REPORT SOURCE	BEARING INDICATOR
0 - EW FIX	1 - FIX	0 - ES (OTHER THAN RDF)	0 OR 1
3 - BEARING, ES	0 - BEARING	0 - ES (OTHER THAN RDF)	0 - BEARING
5 - BEARING, RADIO DIRECTION FINDING	0 - BEARING	1 - RDF	NA
7 - BEARING, UNKNOWN	0 - BEARING	0 - ES (OTHER THAN RDF)	1 - BEARING UNKNOWN

(Note: An M.6B/M.86B with F/B = 1 and RS = 1 is illegal. Also, when M.86B RS = 1, the M.86B has no Bearing Indicator field.)

2. Hour and Minute are determined from the M.86B Time Stale field by subtracting the value in the Time Stale field from the estimated time of transmission of the J3.7 message, rounding to the nearest whole minute. This procedure will be used when Time Stale = 30, even though 30 is defined as 30 minutes or more. Time Stale = 31, Nonreal-Time Fix or Bearing, shall be translated to Hour = 31, No Statement, and Minute = 63, No Statement.

3. The Identity field is determined from the M.6B Threat Evaluation field as follows:

Link 16	Link 11/11B
IDENTITY	THREAT EVALUATION
0 - PENDING	0 - PENDING
1 - UNKNOWN	1 - UNKNOWN
2 - ASSUMED FRIEND	2 - NONTHREAT/FRIEND
5 - SUSPECT	3 - THREAT

APPENDIX C

TABLE C.5.2-J3.7-3. J3.7 Message Data Element Translation from the M.6B/M.86B Message (Sheet 6 of 7)

NOTES (Continued)

4. Link 11/11B Bearing is in 360/512 degree increments, and Link 16 Bearing is in 360/4096 degree increments. Translate Link 11/11B to the nearest Link 16 increment (.5 rounded up).

5. Bearing Accuracy is determined as follows:

<u>Link 16</u>	<u>Link 11/11B</u>
<u>BEARING ACCURACY (NO STATEMENT)</u>	<u>BEARING ACCURACY</u>
0(NO STATEMENT)	0(NO STATEMENT)
1(> 10.0 DEGREES)	3(= OR > 10 DEGREES)
2(<= 10.0 DEGREES)	2(< 10 DEGREES)
6(<= 2.0 DEGREES)	1(< 2 DEGREES)

6. If Report Source is equal to 0, Platform Evaluation Confidence will be transmitted as value 0.

7. The J3.7 Environment/Category (E/C) and Platform fields are determined from the M.6B Platform field as follows:

<u>Link 16</u>		<u>Link 11/11B</u>
<u>ENVIRONMENT/CATEGORY</u>	<u>PLATFORM TYPE</u>	<u>PLATFORM</u>
0 - NO STATEMENT/ UNKNOWN	0 - NO STATEMENT	0 - NO STATEMENT
<u>ENVIRONMENT/CATEGORY</u>	<u>AIR PLATFORM</u>	<u>PLATFORM</u>
2 - AIR	0 - NO STATEMENT	2 - AIRBORNE (AIRCRAFT EXCLUDING MISSILE)
	13 - MISSILE	1 - MISSILE
	36 - MISSILE CONTROL UNIT	6 - MISSILE CONTROL UNIT (AIRBORNE)
<u>ENVIRONMENT/CATEGORY</u>	<u>SURFACE (MARITIME) PLATFORM</u>	<u>PLATFORM</u>
3 - SURFACE (MARITIME)	0 - NO STATEMENT	3 - SURFACE
	33 - MISSILE CONTROL UNIT	7 - MISSILE CONTROL UNIT (SURFACE/ SUBSURFACE)

<u>WORD</u>	<u>DATA ELEMENT</u>	<u>TRANSLATION</u>		
<u>J5.4C2</u>	<u>NOT TRANSLATED</u>	<u>VALUE</u>	<u>REQUIRED</u>	<u>MESSAGE</u>
		<u>FIELD</u>	<u>VALUE</u>	<u>NOTES</u>

APPENDIX C

TABLE C.5.2-J5.4-1. J5.4 Message Data Element Translation from the M.4C/M.84C Message (Sheet 4 of 5)

NOTES

1. The J5.4 message is only translated from an M.4C when Switch value is 0 (Bearing and/or Range). When the M.4C Switch value is 2 or 3, the J3.0 message is forwarded.

2. The Identity field is determined as follows:

Link 16	Link 11
IDENTITY	IDENTITY
0 - PENDING	0 - NO STATEMENT/PENDING
1 - UNKNOWN	3 - UNKNOWN
3 - FRIEND	1 - FRIEND
6 - HOSTILE	2 - HOSTILE

3. If M.4B Time Switch = 1, J5.4I Minute and Hour equate to M.4B Minutes and Hours, respectively. Otherwise, J5.4I Minute and Hour shall be set to No Statement.

4. The J5.4 Bearing Report Type (BRT) and Bearing 1, ASW fields are determined from the M.84C Bearing field as follows:

Link 16	Link 11/11B
BEARING REPORT TYPE	BEARING
0	0-254(0 THROUGH 357 48/256 DEGREES)
3	255(NO STATEMENT/ UNKNOWN)

5. The Frequency, Source Acoustic (FSA) is translated from the middle frequency of the frequency range reported in the M.84C Main Rate Frequency (MRF) field. For example, the M.84C value 2 ($100 < F < 200$ HZ) equates to the J5.4 value 1200 (150 HZ). This is derived by the following formula:

The value of the FSA = the value of the (MRF X 800) - 400. For example, 1200 = (2 X 800) - 400 for the M.84C value 2 ($100 < F < 200$ HZ).

MRF = 0 and 26-31 shall be translated to FSA = 0.

APPENDIX C

TABLE C.5.2-J5.4-1. J5.4 Message Data Element Translation from the M.4C/M.84C Message (Sheet 5 of 5)

NOTES (Continued)

6. Ambiguous bearings are not reported in the M.4C/M.84C/M.4B Bearing message. Therefore, the Bearing 2, ASW field shall be set to 0 (0 Degrees) for transmission.

7. The conversion of Range between Link 16 and Link 11 is as follows:

Link 16	Link 11/11B
RANGE	RANGE
0 - NO STATEMENT/UNKNOWN	0 - NO STATEMENT/UNKNOWN
1-524 (250-131,000 Yds)	1-8, 191 (16-131,056 Yds)

Link 16 Range is in 250 yard increments, and Link 11 range is in 16 yard increments. Link 11 Range of 16 to 112 shall translate to 250 yards in Link 16. All other Link 11 Ranges shall be translated to the nearest Link 16 250 yard increment.

8. The J5.4C1 Bearing Accuracy, ASW field is determined from the M.84C Bearing Accuracy field as follows:

Link 16	Link 11/11B
BEARING ACCURACY, ASW (NO STATEMENT)	BEARING ACCURACY
0(NO STATEMENT)	0(NO STATEMENT)
1(+ OR - 2 DEGREES)	1(< = 2 DEGREES)
2(+ OR - 5 DEGREES)	2(< = 5 DEGREES)
3(+ OR - 10 DEGREES)	3(< = 10 DEGREES)
4(+ OR - 15 DEGREES)	4(< = 15 DEGREES)
5(+ OR - 20 DEGREES)	5(< = 20 DEGREES)
6(+ OR - 30 DEGREES)	6(< = 30 DEGREES)
8(OVER 45 DEGREES)	7(OVER 30 DEGREES)

TABLE C.5.2-J5.4-2. J5.4 Message Data Element Translation from the M.4D/M.84D Message (Sheet 5 of 7)

NOTES

1. The J5.4I Identity field is determined as follows:

Link 16	Link 11
IDENTITY	IDENTITY
0 - PENDING	0 - NO STATEMENT/PENDING
1 - UNKNOWN	3 - UNKNOWN
3 - FRIEND	1 - FRIEND
6 - HOSTILE	2 - HOSTILE

2. The J5.4I Confidence Level field is determined from the M.84D Classification and Classification Amplification fields as follows:

Link 16	Link 11	
CONFIDENCE LEVEL	CLASSIFICATION	CLASSIFICATION AMPLIFICATION
0 - NO STATEMENT	0 - NO STATEMENT/ UNCLASSIFIED	0 - NO STATEMENT
	9-15 - UNDEFINED	ANY
2 - POSSIBLE SUBMARINE LOW ONE	1 - POSSUB 1	
3 - POSSIBLE SUBMARINE LOW TWO	2 - POSSUB 2	
4 - POSSIBLE SUBMARINE HIGH THREE	3 - POSSUB 3	
5 - POSSIBLE SUBMARINE HIGH FOUR	4 - POSSUB 4	
6 - PROBABLE SUBMARINE	5 - PROBABLE SUBMARINE	
	6 - ACOUSTIC POSITIVE (ACPOS)	
7 - CERTAIN SUBMARINE	7 - CERTAIN SUBMARINE	
8 - NON SUBMARINE	8 - NONSUBMARINE	0, 2-5, 8-15
9 - SURFACE VESSEL		1, 6, 7

3. The J5.4I Subsurface (Maritime) Platform is determined from the M.84D Classification and Classification Amplification fields as follows:

APPENDIX C

TABLE C.5.2-J5.4-2. J5.4 Message Data Element Translation from the M.4D/M.84D Message (Sheet 6 of 7)

NOTES (Continued)

3. (Continued)

Link 16	Link 11	CLASSIFICATION
SUBSURFACE (MARITIME)	CLASSIFICATION	AMPLIFICATION
PLATFORM		
0	0	0
	1-7	0 or 14, 15
	9-15	ANY
1	1-7	1
2		3
6		9
7		10
8		11
9		2
13		4
14		5
15		6

18	8	0, 4, 8-15
19		1, 6, 7
20		2
22		3
25		5
33	1-7	12
34		13

4. If the M.4B Time Switch = 1, J5.4I Minute and Hour equate to M.4B Minutes and Hours, respectively. Otherwise, J5.4I Minute and Hour shall be set to No Statement.

5. If no M.4D with the indicated B-Frame Switch value, or M.84D with the indicated Switch value, is received in this message sequence, the indicated Link 16 fields shall be set to No Statement. Otherwise, the Link 11 fields equate without conversion.

6. If M.84D(SW=0) Bearing Indicator = 1, set J5.4 Bearing Report Type (BRT) to value 3. Otherwise, M.4D BRT equates to J5.4 BRT.

7. If the Link 16 BRT to be forwarded is 0 or 2, Bearing 1 equates without conversion to Bearing 1 ASW, and Bearing 2 ASW shall arbitrarily be set to 0 since it is not interpreted. If the Link 16 BRT to be forwarded is 1,

APPENDIX C

TABLE C.5.2-J5.4-2. J5.4 Message Data Element Translation from the M.4D/M.84D Message (Sheet 7 of 7)

NOTES (Continued)

7. (Continued)

Bearing 1 and Bearing 2 equate without conversion to Bearing 1 ASW and Bearing 2 ASW, respectively. If the Link 16 BRT to be forwarded is 3, Bearing 1 ASW and Bearing 2 ASW shall arbitrarily be set to 0 since these two fields will not be interpreted.

8. The J5.4C1 Bearing Accuracy, ASW field is determined from the M.84D Bearing Accuracy field as follows:

Link 16	Link 11/11B
BEARING ACCURACY, ASW (NO STATEMENT)	BEARING ACCURACY
0(NO STATEMENT)	0(NO STATEMENT)
1(+ OR - 2 DEGREES)	1(< = 2 DEGREES)
2(+ OR - 5 DEGREES)	2(< = 5 DEGREES)
3(+ OR - 10 DEGREES)	3(< = 10 DEGREES)
4(+ OR - 15 DEGREES)	4(< = 15 DEGREES)
5(+ OR - 20 DEGREES)	5(< = 20 DEGREES)
6(+ OR - 30 DEGREES)	6(< = 30 DEGREES)
8(OVER 45 DEGREES)	7(OVER 30 DEGREES)

9. The J5.4C2 Sensor Depth field is derived from the M.4D Sensor Depth field as follows: The Sensor Depth field value forwarded on Link 16 shall be twice that of the Link 11 value; except, when value 21-30 (Undefined), or 31 (No Statement), is received from Link 11, a value 127 (No Statement), shall be forwarded on Link 16.

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-J6.0. J6.0 Message Data Element Translation from the
M.11M/M.811M Message (Sheet 3 of 12)

NOTES

1. The conversion from Category to Environment/Category is as follows:

Link 16	Link 11/11B
ENVIRONMENT/CATEGORY	CATEGORY
0 - NO STATEMENT/UNKNOWN	0 - NO STATEMENT/UNKNOWN
2 - AIR	7 - RESET TO NO STATEMENT/ UNKNOWN
3 - SURFACE (MARITIME)	1 - AIR
4 - SUBSURFACE (MARITIME)	5 - MISSILE
5 - LAND (GROUND)	2 - SURFACE (OCEANIC)
	3 - SUBSURFACE
	4 - LAND

2. Nationality/Alliance of Track is derived from Nationality/Alliance as follows:

Link 16	Link 11/11B
NATIONALITY/ALLIANCE OF TRACK	NATIONALITY/ALLIANCE
0-98	0-98
127	99

3. When the M.11M Category = 1 (Air), the J6.0I Air Platform is derived from General Type as follows:

Link 16	Link 11/11B
AIR PLATFORM	GENERAL TYPE
0 - NO STATEMENT	0 - NO STATEMENT
1 - FIGHTER	11-13 - UNDEFINED
2 - FIGHTER BOMBER	14 - OTHER
4 - BOMBER	1 - FIGHTER/INTERCEPTOR
16 - AIRBORNE EARLY WARNING AND CONTROL (AEW)	2 - FIGHTER/BOMBER ATTACK
19 - DRONE	3 - BOMBER
23 - CIVIL, GENERAL	10 - AEW
27 - HELICOPTER (HELO)	6 - DRONE/RPV
28 - ATTACK HELICOPTER	8 - CIVIL
33 - TACTICAL SUPPORT	4 - HELO
34 - PATROL	5 - ATTACK HELO
63 - RESET TO NO STATEMENT	7 - SUPPORT
	9 - PATROL
	15 - RESET TO NO STATEMENT

APPENDIX C

TABLE C.5.2-J6.0. J6.0 Message Data Element Translation from the
M.11M/M.811M Message (Sheet 4 of 12)

NOTES (Continued)

When the M.11M Category = 5 (Missile), set the J6.0I Air Platform field to 13 (Missile).

4. When the M.11M Category = 2 (Surface Oceanic), the J6.0I Surface (Maritime) Platform is derived from General Type as follows:

Link 16	Link 11/11B
<u>SURFACE (MARITIME) PLATFORM</u>	<u>GENERAL TYPE</u>
0 - NO STATEMENT	0 - NO STATEMENT
	12, 13 - UNDEFINED
	14 - OTHER
1 - AIRCRAFT CARRIER (CV)	1 - AIRCRAFT CARRIER
3 - CRUISER	3 - CRUISER
4 - DESTROYER	2 - DESTROYER
5 - FRIGATE	4 - FRIGATE
7 - AMPHIBIOUS	7 - AMPHIBIOUS
12 - TANKER/OILER	9 - TANKER/OILER
14 - MINE WARFARE SHIP	6 - MINE WARFARE
27 - PATROL	5 - PATROL
28 - SUPPORT	8 - SUPPORT
29 - FISHING VESSEL	10 - FISHING BOAT
30 - MERCHANT VESSEL	11 - MERCHANT
63 - RESET TO NO STATEMENT	15 - RESET TO NO STATEMENT

5. When the M.11M Category = 3 (Subsurface), the J6.0I Subsurface (Maritime) Platform is derived from General Type as follows:

Link 16	Link 11/11B
<u>SUBSURFACE (MARITIME) PLATFORM</u>	<u>GENERAL TYPE</u>
0 - NO STATEMENT	0 - NO STATEMENT
	4-13 - UNDEFINED
	14 - OTHER
12 - NUCLEAR BALLISTIC MISSILE SUBMARINE	3 - BALLISTIC MISSILE LAUNCHER
28 - ATTACK SUBMARINE	1 - ATTACK
29 - CRUISE MISSILE LAUNCHER	2 - CRUISE MISSILE LAUNCHER
63 - RESET TO NO STATEMENT	15 - RESET TO NO STATEMENT

6. When the M.11M Category = 4 (Land), the J6.0I Land (Ground) Platform is derived from General Type as follows:

APPENDIX C

TABLE C.5.2-J6.0. J6.0 Message Data Element Translation from the
M.11M/M.811M Message (Sheet 5 of 12)

NOTES (Continued)

6. (Continued)

Link 16	Link 11/11B
LAND (GROUND) PLATFORM	GENERAL TYPE
0 - NO STATEMENT	0 - NO STATEMENT
1 - TROOP CONCENTRATION/UNIT	14 - OTHER
3 - COMMAND/CONTROL/CMD AND CONTROL CENTER	12 - TROOP CONCENTRATION
7 - AIRFIELD/AIRBASE	8 - COMMAND CENTER
13 - CONVOY	5 - AIR BASE
21 - FIELD ARTILLERY	13 - CONVOY/VEHICLE

6 - ELECTRONIC WARFARE (EW)	8 - ELECTRONIC WARFARE
14 - AMPHIBIOUS WARFARE	6 - AMPHIBIOUS WARFARE
18 - ANTISUBMARINE WARFARE (ASW)	4 - ANTISUBMARINE WARFARE

APPENDIX C

TABLE C.5.2-J6.0. J6.0 Message Data Element Translation from the M.11M/M.811M Message (Sheet 7 of 12)

NOTES (Continued)

8. (Continued)

Link 16	Link 11/11B
SURFACE (MARITIME) PLATFORM ACTIVITY	MISSION
21 - SPECIAL WARFARE	10 - SPECIAL WARFARE
22 - STRIKE WARFARE	5 - STRIKE WARFARE
23 - ANTIAIR WARFARE	1 - ANTIAIR WARFARE
27 - MINE WARFARE	7 - MINE WARFARE
29 - NONCOMBATANT OPERATIONS	9 - NONCOMBATANT OPERATIONS
115-126 - SURFACE (MARITIME) ACTIVITY 1 THROUGH 12	51-62 - SM-1 THROUGH SM-12
127 - RESET TO NO STATEMENT	63 - RESET TO NO STATEMENT

9. When the M.11M Category = 3 (Subsurface), the J6.0I Subsurface (Maritime) Platform Activity is derived from the M.811M Mission field as follows:

Link 16	Link 11/11B
SURFACE (MARITIME) PLATFORM ACTIVITY	MISSION
0 - NO STATEMENT	0 - NO STATEMENT
	9-50 - UNDEFINED
5 - ANTISURFACE WARFARE	3 - ANTISURFACE WARFARE
6 - ELECTRONIC WARFARE (EW)	7 - ELECTRONIC WARFARE
14 - AMPHIBIOUS WARFARE	4 - AMPHIBIOUS WARFARE
18 - ANTISUBMARINE WARFARE (ASW)	2 - ANTISUBMARINE WARFARE
21 - SPECIAL WARFARE	6 - SPECIAL WARFARE
22 - STRIKE WARFARE	1 - STRIKE WARFARE
27 - MINE WARFARE	5 - MINE WARFARE
29 - NONCOMBATANT OPERATIONS	8 - NONCOMBATANT OPERATIONS
115-126 - SURFACE (MARITIME) ACTIVITY 1 THROUGH 12	51-62 - UM-1 THROUGH UM-12
127 - RESET TO NO STATEMENT	63 - RESET TO NO STATEMENT

10. When the M.11M Category = 4 (Land), the J6.0I Land (Ground) Platform Activity is derived from the M.811M Mission field as follows:

Link 16	Link 11/11B
LAND (GROUND) PLATFORM ACTIVITY	MISSION
0 - NO STATEMENT	0 - NO STATEMENT
	1-62 - UNDEFINED
127 - RESET TO NO STATEMENT	63 - RESET TO NO STATEMENT

11. When M.11M Category = 5, Activity Amplification Index is derived from Current Activity as follows:

APPENDIX C

TABLE C.5.2-J6.0. J6.0 Message Data Element Translation from the
M.11M/M.811M Message (Sheet 8 of 12)

NOTES (Continued)

11. (Continued)

Link 16	Link 11/11B
ACTIVITY AMPLIFICATION INDEX	CURRENT ACTIVITY
0 - NO STATEMENT	0 - NO STATEMENT
	1 - UNDEFINED
	3-62 - UNDEFINED
2 - ASSIGNED TO DESTROY	2 - ASSIGNED TO DESTROY
63 - RESET TO NO STATEMENT	63 - RESET TO NO STATEMENT

When M.11M Category is not equal to 5, Activity Amplification Index equates to Current Activity.

12. When the M.11M Category = 1 (Air), the J6.0E0 Air Specific Type is derived from General Type and Specific Type as follows:

Link 16	Link 11/11B	
AIR SPECIFIC TYPE	GENERAL TYPE	SPECIFIC TYPE
0	1	0-31, 49-62

Translation from Link 11/11B (Sheet 4 of 4)

NOTES

1. An equivalent field exists in the M.9A message but is not reported with the M.9A(AC=1 or 2) message.
2. The controlling unit is determined by a separately received M.9A(AC=6) message. This field should reflect whether the forwarded M.9A(AC=1 or 2) message did or did not originate with the current controlling unit.
3. Air and Surface are the only Environment/Category values that are legal for transmission with the M.9A(AC=1 or 2) message. The conversion for Environment/Category is as follows:

Link 16
ENVIRONMENT/CATEGORY
2 - AIR
3 - SURFACE (MARITIME)

Link 11/11B
ENVIRONMENT/CATEGORY
1 - AIR
2 - SURFACE

APPENDIX C

TABLE C.5.2-J7.5-1. J7.5 Message Data Element Translation from the M.9A(AC=9) Message (Sheet 3 of 4)

NOTES

1. The J7.5 (ACT = 0, 1, or 2) messages are translated from the M.9A(AC=9) message. The J7.5 (ACT = 3) message is translated from the M.11D(TR=1) message.
2. The Action, IFF/SIF Management field is translated from both the IFF/SIF Action Code and the Mode Indicator fields as follows:

<u>Link 16</u>	<u>Link 11/11B</u>	
<u>ACTION, IFF/SIF</u>		
<u>MANAGEMENT</u>	<u>IFF/SIF ACTION CODE</u>	<u>MODE INDICATOR</u>
0	0	0, 2-4, 6
1	1	2-4, 6
2	1	7

3. The Mode Applicability field is translated from the Mode Indicator field as follows:

<u>Link 16</u>	<u>Link 11/11B</u>
<u>MODE IV INDICATOR APPLICABILITY</u>	<u>MODE INDICATOR</u>
0	0, 2, 4, 6
1	3 or 7
<u>MODE I CODE APPLICABILITY</u>	<u>MODE INDICATOR</u>
0	3, 4, 6
1	0, 2, 7
<u>MODE II CODE APPLICABILITY</u>	<u>MODE INDICATOR</u>
0	2, 3, 6
1	0, 4, 7
<u>MODE III CODE APPLICABILITY</u>	<u>MODE INDICATOR</u>
0	2-4
1	0, 6, 7

4. Only one of the J7.5 Mode I, II, III, or IV data elements will be nonzero as translated from the M.9A(AC=9, ISAC=1) message. The Mode Indicator (MI=2, 3, 4, or 6) indicates which mode is reported in the M.9A(AC=9) Mode I/II/III/IV Codes field. In all other cases the J7.5 Mode Codes will be equal to zero.

APPENDIX C

TABLE C.5.2-J7.5-1. J7.5 Message Data Element Translation from the
M.9A(AC=9) Message (Sheet 4 of 4)

NOTES (Continued)

5. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with least significant digit greater than 3 not being used. The Mode I field of the J7.5I IFF Codes are in the order A4, A2, A1, B2, B1, with the most significant bit A4 in bit position 45. The Mode I/II/III Code field of the M.9A(AC=9) IFF codes are in the order A, B, C, D, (A, B only for Mode I) with each triad in the order 4, 2, 1 and the most significant bit A4 is bit position 23.

APPENDIX C

TABLE C.5.2-J9.0-2. J9.0 Message Data Element Translation from the M.15 Message (Sheet 3 of 4)

NOTES

1. The J9.0 message may be translated from either the M.10A message or M.15 message. Selected M.10A messages (Order values 2-5) will be forwarded as J9.0 messages. All M.15 messages will be forwarded as J9.0 messages.
2. If the Command value in the M.15 message equals 0-2, 4-8, or 14-19 the identical values will be reported for the Command value in the J9.0 message. When the M.15 message Command value is 3 (Investigate/Assign), the J9.0 message Command value 3 (Assign) or 23 (Investigate/Interrogate) will be determined by Weapon Type. If the Weapon Type is 1 (Aircraft), Command value 23 will be transmitted. If Weapon Type is 0 (Any/All Weapon Systems), 2 (Missile), or 3 (Conventional), then Command value 3 will be transmitted. If the M.15 Command Value is 20, the J9.0 Command Value 27 shall be forwarded.
3. If the M.15 Command value is 18 or 19, the M.15 Duty Assignment Functional Area and Duty Assignment fields will be reported as identical values on Link 16 in the J9.0 Duty Assignment Functional Area and Duty Assignment fields. If the Command value is other than 18 or 19, the Duty Assignment is set to No Statement.
4. If the M.15 Command value is 16 or 17, the J9.0 Command Mission equates to M.15 TN Weapon System/TN-1/Originator in accordance with General Note 15. If the Command value is other than 16 or 17, set Command Mission to No Statement.
5. Not Used.
6. If the M.15 Command value is 0-11, the M.15 TN Weapon System/TN-1/Originator will be the Track Number of the weapon system specified on Link 11 and will be reported as identical values on Link 16 in the J9.0 Track Number, Friendly Weapon field. On Link 11B, the M.15 TN Weapon System/TN-1/Originator will be the Track Number of the originator of the message and No

APPENDIX C

TABLE C.5.2-J9.0-2. J9.0 Message Data Element Translation from the M.15
Message (Sheet 4 of 4)

NOTES (Continued)

6. (Continued)

Statement will be reported on Link 16 in the J9.0 Track Number, Friendly
Weapon field.

7. If the M.15 Command value is 20, the M.15 Number of Missiles and Impact
Time fields will be reported as identical values on Link 16 in the J9.0
Number of Missiles and Minute fields, and the J9.0 Hour field shall be set as
follows: if the Impact Time is No Statement then use No Statement; if the
minutes given by the Impact Time exceed the Forwarding Unit's system actual
minutes, then use the system actual hour; if the minutes given are less than
or equal to Forwarding Unit's system actual minutes, then use the system
actual hour plus 1. If the Command value is other than 20, then set Hour and
Minute to No Statement and Number of Missiles to All Available.

(Sheet 2 of 2)

NOTES

1. If the M.14 message Weapon Type (WT) values 0-9 are used, the identical values will be used in the J10.2 Weapon System. When M.14 WT = 10 (Air-to-Surface Missile) is received, the J10.2 Weapon System = 18 (Air-to-Surface Missile) will be forwarded.
2. The M.14 message Weapon/Engagement Status (W/ES)=0 or 1 will be forwarded to the J13 series message. When the M.14 W/ES=2 (Investigating) and the Weapon Type=3, 5, or 9 is received, the J10.2 WES = 11 (Investigating) will be forwarded. All other W/ES values will be reported as identical values in the J10.2 message.

APPENDIX C

TABLE C.5.2-J10.3. J10.3 Message Data Element Translation from Link 11/11B
(Sheet 3 of 4)

NOTES

1. Request for Assume Control values 0 and 1 translate directly from the M.10A message. Request for Assume Control value 2 translates directly from an M.10A(Order=6) message. All other M.10A message Order values translate to J9.0 messages.
2. The M.10A Receipt/Compliance (R/C) values, and R/C = 7 CANTPRO AMP values, will be forwarded in the J10.3 R/C field as follows:

Link 16	Link 11/11B	
RECEIPT/COMPLIANCE	RECEIPT/COMPLIANCE	CANTPRO AMP
0	0	NA
3	3	
4	4	
6	6	
7	7	0
16	7	1
17	7	2
18	7	3
19	7	4
20	7	5
21	7	6
22	7	7

3. M.10A message with R/C = 3, 6, or 7 received from Link 11B, and any M.10A (Order =6) message, will have the address of the originating unit in the M.10A message TN-2 field. In these cases the forwarded Objective Track Number in the J10.3E0 word will be set to zero and not the received M.10A message TN-2 value.
4. One or more M.9E messages with information related to the controlled unit may be received following an M.10A (Order = 6, R/C =0) message or M.10A (Order =0 or 1, R/C = 3) message. Different M.9E messages may be expected following an M.10A message with R/C value of Original Order or WILCO. The FJU shall forward only the M.9E message derived information that is received following the current M.10A message being forwarded.

APPENDIX C

TABLE C.5.2-J10.3. J10.3 Message Data Element Translation from Link 11/11B
(Sheet 4 of 4)

NOTES (Continued)

5. Forwarded J10.3 (Request for Assume Control = 0 or 1) WILCO replies shall include the J10.3C1 word even if no M.9E message was received following the M.10A (Order = 0 or 1) message. In this case, the Voice Frequency/Channel and/or Link 4A Frequency fields shall be forwarded as value 0.
6. The Mode III Code used in the J10.3C1 word has no relation to the Mode III Code reported in the M.11D message.
7. This word is not forwarded from Link 11/11B. The Mission Correlator of this word is not related to the Mission Number found in the M.9E(AC=6) message.
8. Forwarded J10.3 (Request for Assume Control = 2) replies (R/C = 2, 3, 6, or 7) shall include a J10.3C1 word which is identical to the J10.3C1 word received by the FJU in the original J10.3 (R/C = 0) message. Therefore, the FJU must save the original J10.3 (Request for Assume Control = 2, R/C = 0) until an M.10A reply (R/C = 3, 6, or 7) is received from the Addressee TN of the original message, or until the FJU transmits a J10.3 (Request for Assume Control = 2, R/C = 21) reply to the originator.

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-J13.2-1. J13.2 Message Data Element Translation from the M.11B Message (Sheet 4 of 5)

NOTES

1. Fuel is reported in 400-pound increments in the M.11B message when the Fuel/Time Switch (FT SW) is set to zero. These reported fuel values will be translated to their directly equivalent 100-pound increment value in the J13.2 message. An M.11B message reporting 50,800 pounds or more of fuel (value 127) will be forwarded as 50,800 pounds. Fuel in the J13.2 message will be set to No Statement if Fuel in the M.11B message is reported as 0 value or if the FT SW is reported as 1.
2. Time-to-Time Off Task in minutes is reported in the M.11B message when the FT SW is set to 1. In this case the minutes will be converted directly to hours and minutes, and the Time Report Function field will be forwarded as value 4. An M.11B message with FT SW set to value 1 and Fuel/Time set to value 127 will be forwarded as two hours and six minutes. If the M.11B FT SW is received as zero, the J13.2 Time Report Function, Minute and Hour will all be forwarded as No Statement.
3. The Air Specific Type is determined from the M.11B Aircraft Type field as follows:

Link 16
AIR SPECIFIC TYPE
0 - NO STATEMENT
1 - F-4 PHANTOM II
2 - F-5 TIGER II
3 - F-8 CRUSADER
4 - F-14 TOMCAT

APPENDIX C

TABLE C.5.2-J13.2-1. J13.2 Message Data Element Translation from the M.11B Message (Sheet 5 of 5)

NOTES (Continued)

3. (Continued)

Link 16	Link 11/11B
AIR SPECIFIC TYPE	AIRCRAFT TYPE
256 - A-4 SKYHAWK	11 - A-4
257 - A-6 INTRUDER	13 - A-6
258 - A-7 CORSAIR II	14 - A-7
259 - A-10 THUNDERBOLT II	16 - A-10
264 - AV-8 HARRIER	15 - AV-8
265 - F/A-18 HORNET	19 - A-18

4. The M.11B Weapon Type provides the capability to show the simple presence or absence of a particular group of air-to-air weapons. The J13.2 message indicates a specific type of weapon in a Type of Stores field and the quantity of that weapon being carried in the related Number of Stores field. Any one of the Type of Stores fields may be selected by the FJU to forward each associated weapon type. Bit 32 of the M.11B will be ignored for data forwarding purposes. If bits 33-35 are all zero, the J13.2 Type of Stores 1, 2, 3, and 4 will be forwarded as No Statement. If bit 33 is received as 1, Type of Stores value = 1 will be forwarded. If bit 34 is received as 1, Type of Stores value = 2 will be forwarded. If bit 35 is received as 1, Type of Stores value = 3 will be forwarded.

5. Gun Capable is determined from the M.11B Ordnance D Field as follows:

Link 16	Link 11/11B
GUN CAPABLE	ORDNANCE D
0	0
	1
1	2
	3

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-J13.2-2. J13.2 Message Data Element Translation from the M.11C Message (Sheet 5 of 7)

NOTES

1. If the B-Frame Switch is set to 2, Fuel is reported in 400-pound increments in the M.11C message. These reported Fuel values will be translated to their directly equivalent 100-pound increment values in the J13.2 message. An M.11C message reporting 50,800 pounds or more of fuel (value 127) will be forwarded as 50,800 pounds. Fuel in the J13.2 message will be set to No Statement if the M.11C Fuel value is zero or if the M.11C message reporting fuel is not received.

2. Time Report Function (TRF), Hour, and Minute are determined from the M.11C Time Remaining field as follows:

<u>Link 16</u>			<u>Link 11</u>
<u>TIME REPORT</u>			
<u>FUNCTION</u>	<u>HOUR</u>	<u>MINUTE</u>	<u>TIME REMAINING</u>
0	31 - NO STATEMENT	63 - NO STATEMENT	0 - NO STATEMENT
	Current Time Plus		1 - RETURNING TO BASE
5	0	15	2 - ENROUTE TO STATION
		30	3 - 0 THROUGH 15 MINUTES
		45	4 - 16 THROUGH 30 MINUTES
	1	0	5 - 31 THROUGH 45 MINUTES
	1	30	6 - 46 MINUTES THROUGH 1 HOUR
	2	0	7 - LONGER THAN 1 HOUR THROUGH 1.5 HOURS
			8 - LONGER THAN 1.5 HOURS THROUGH 2 HOURS
	2	30	9 - LONGER THAN 2 HOURS THROUGH 2.5 HOURS

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-J13.2-2. J13.2 Message Data Element Translation from the M.11C Message (Sheet 6 of 7)

NOTES (Continued)

2. (Continued)

Link 16			Link 11
TIME REPORT			
FUNCTION	HOUR	MINUTE	TIME REMAINING
	3	0	10 - LONGER THAN 2.5 HOURS THROUGH 3 HOURS
	4	0	11 - LONGER THAN 3 HOURS THROUGH 4 HOURS
	6	0	12 - LONGER THAN 4 HOURS THROUGH 6 HOURS
	8	0	13 - LONGER THAN 6 HOURS THROUGH 8 HOURS
	10	0	14 - LONGER THAN 8 HOURS THROUGH 10 HOURS
	10	1	15 - LONGER THAN 10 HOURS

3. The M.11C Aircraft Type values will be forwarded in the J13.2 Aircraft Model and Air Specific Type as follows:

Link 16		Link 11
AIR SPECIFIC TYPE	AIRCRAFT MODEL	AIRCRAFT TYPE
0 - NO STATEMENT	0 - NO STATEMENT	0 - NO STATEMENT
533 - P-3 ORION	2 - B	13-15 - UNDEFINED
543 - S-2 TRACKER	3 - C	2 - P-3A/P-3B
544 - S-3 VIKING	5 - E	3 - P-3C

NOTES (Continued)

3. (Continued)

<u>Link 16</u>		<u>Link 11</u>
<u>AIR SPECIFIC TYPE</u>	<u>AIRCRAFT MODEL</u>	<u>AIRCRAFT TYPE</u>
1535 - HELICOPTER GENERAL	0 - NO STATEMENT	8 - ASW HELO (GENERAL) 9 - ASW HELO (DIPPING) 10 - ASW HELO (WEAPON CARRIER)

4. When the M.11C B-Frame Switch=0, 2, or 3, forward all noted fields as value 0.

5. When the M.11C B-Frame Switch=1, 2, or 3, forward all noted fields as value 0.

6. Radar Watch Altitude of the J13.2 message reports the best altitude for radar watch in 100-foot increments. The Altitude for Watch of the M.11C message reports the same information in 500-foot increments. The M.11C value will be translated to the directly equivalent value in the J13.2 message. Example: M.11C value 5 (2,500 Feet) is translated to value 25 (2,500 Feet) in the J13.2 message. When the M.11C message is received with value 0 (No Statement), the J13.2 Radar Watch Altitude value 511 (No Statement) will be forwarded. When the M.11C B-Frame Switch=2 is not received, forward Radar Watch Altitude of No Statement.

TABLE C.5.2-J13.5. J13.5 Message Data Element Translation from the M.14 Message (Sheet 3 of 4)

NOTES

1. The M.14 Weapon/Engagement Statuses (W/ES) will be reported in the J13.5 Operational Capability field as follows:

Link 16	Link 11/11B
OPERATIONAL CAPABILITY	WEAPON/ENGAGEMENT STATUS
0	12
1	0
3	1

2. Site Type is more specific than Weapon Type; therefore, the generic weapon types of SAM and Conventional (Short-range Missile/Guns) do not translate to Site Type.

3. The M.14 Hot Inventory will be translated to the J13.5 Hot Inventory as follows:

Link 16	Link 11/11B
HOT INVENTORY	HOT INVENTORY
1-125	1-125
126	126, 127
127	0

4. The M.14 W/ES field will be reported in the J13.5 Perimeter Engagement Status field as follows:

Link 16	Link 11/11B
PERIMETER ENGAGEMENT STATUS	WEAPON/ENGAGEMENT STATUS
0	0, 1
1	12

5. The M.14 Cold Inventory will be translated to the J13.5 Cold Inventory as follows:

TABLE C.5.2-J14.0-1. J14.0 Message Data Element Translation from the M.5/M.85 Message (Sheet 4 of 4)

NOTES

1. The J14.0 message is only translated from an M.5 message when Point = 0, and the EA Fix is not simulated.

2. When the M.85 Switch = 0, the J14.0 Minute field is forwarded as No Statement. When Switch = 1, the J14.0 Minute field is determined from the M.85 Time Switch and Minutes fields as follows:

Link 16	Link 11/11B	
MINUTE	TIME SWITCH	MINUTES
0-59 - 0 THROUGH 59	1	0-59 - 0 THROUGH 59 MINUTES
63 - NO STATEMENT	0	ANY

3. When the M.85 Switch = 0, the J14.0 Hour field is forwarded as No Statement. When Switch = 1, the J14.0 Hour field is determined from the M.85 Time Switch and Hours field as follows:

Link 16	Link 11/11B	
HOUR	TIME SWITCH	HOURS
0-23 (0-23 HOURS)	1	0-23 - 0 THROUGH 23 HOURS
31 - NO STATEMENT	0	ANY

4. The Elevation Angle/Altitude Indicator is determined from the Height/Depth Switch as follows:

Link 16	Link 11/11B
ELEVATION ANGLE/ALTITUDE INDICATOR	HEIGHT/DEPTH SWITCH
0 - NO STATEMENT	1 - DEPTH IN 50 FOOT INCREMENTS
2 - ALTITUDE IS BEING REPORTED	0 - HEIGHT IN 500 FOOT INCREMENTS

TABLE C.5.2-J14.0-2. J14.0 Message Data Element Translation from the M.6A Message (Sheet 7 of 7)

NOTES (Continued)

5. (Continued)

<u>Link 16</u>		<u>Link 11/11B</u>
<u>ENVIRONMENT/CATEGORY</u>	<u>SURFACE (MARITIME)</u> <u>PLATFORM</u>	<u>PLATFORM</u>
3 - SURFACE (MARITIME)	0 - NO STATEMENT 33 - MISSILE CONTROL UNIT	3 - SURFACE 7 - MISSILE CONTROL UNIT (SURFACE/ SUBSURFACE)
<u>ENVIRONMENT/CATEGORY</u>	<u>SUBSURFACE (MARITIME)</u> <u>PLATFORM</u>	<u>PLATFORM</u>
4 - SUBSURFACE (MARITIME)	0 - NO STATEMENT	4 - SUBSURFACE (SUBMARINE)
<u>ENVIRONMENT/CATEGORY</u>	<u>LAND (GROUND) PLATFORM</u>	<u>PLATFORM</u>
5 - LAND (GROUND)	0 - NO STATEMENT	5 - LAND

6. Bearing Accuracy is determined as follows:

<u>Link 16</u>	<u>Link 11/11B</u>
<u>BEARING ACCURACY (NO STATEMENT)</u>	<u>BEARING ACCURACY</u>
0(NO STATEMENT)	3(> = 5 DEGREES/NO STATEMENT)
3(<= 5.0 DEGREES)	2(< 5 DEGREES)
6(<= 2.0 DEGREES)	1(< 2 DEGREES)
7(<= 1.0 DEGREES)	0(< 1 DEGREE)

7. When Action Value = 1 and Switch = 1, the M.6A Elevation equates to the J14.0 Elevation Angle, except that M.6A Elevation = 512 shall be converted to J14.0 Elevation Angle = 511, because J14.0 Elevation Angle = 512 means No Statement, but M.6A Elevation = 512 means $\pi/2$.

APPENDIX C

TABLE C.5.2-J14.0-3. J14.0 Message Data Element Translation from the M.6B/M.86B/M.6C/M.86C Message (Sheet 6 of 8)

NOTES

1. Threat Evaluation is determined as follows:

Link 16	Link 11/11B
THREAT EVALUATION	THREAT EVALUATION
0 - PENDING/NO STATEMENT	0 - PENDING
1 - UNKNOWN	1 - UNKNOWN
2 - NON-THREAT	2 - NONTHREAT/FRIEND
3 - THREAT	3 - THREAT

2. The J14.0 Fix or Bearing Descriptor is determined from the M.6B/M.86B Fix or Bearing (F/B), Report Source (RS), and Bearing Indicator (BI) fields, as follows:

Link 16	Link 11/11B		
FIX OR BEARING DESCRIPTOR	FIX OR BEARING	REPORT SOURCE	BEARING INDICATOR
0 - EW FIX	1 - FIX	0 - ES (OTHER THAN RDF)	0 OR 1
3 - BEARING, ES	0 - BEARING	0 - ES (OTHER THAN RDF)	0 - BEARING
5 - BEARING, RADIO DIRECTION FINDING	0 - BEARING	1 - RDF	NA
7 - BEARING, UNKNOWN	0 - BEARING	0 - ES (OTHER THAN RDF)	1 - BEARING UNKNOWN

(Note: An M.6B/M.86B with F/B = 1 and RS = 1 is illegal. Also, when M.86B RS = 1, the M.86B has no Bearing Indicator field.)

3. Hour and Minute are determined from the M.86B Time Stale field by subtracting the value in the Time Stale field from the estimated time of transmission of the J14.0, rounding to the nearest whole minute. This procedure will be used when Time Stale = 30, even though 30 is defined as 30 minutes or more. Time Stale = 31 (Nonreal-time Fix or Bearing) shall be translated to Hour = 31 (No Statement) and Minute = 63 (No Statement).

APPENDIX C

TABLE C.5.2-J14.0-3. J14.0 Message Data Element Translation from the M.6B/M.86B/M.6C/M.86C Message (Sheet 7 of 8)

NOTES (Continued)

4. The J14.0 Environment/Category (E/C) and Platform fields are determined from the M.6B Platform field as follows:

Link 16		Link 11/11B
ENVIRONMENT/CATEGORY	AIR PLATFORM	PLATFORM
0 - NO STATEMENT/ UNKNOWN	0 - NO STATEMENT	0 - NO STATEMENT
2 - AIR	0 - NO STATEMENT	2 - AIRBORNE (AIRCRAFT EXCLUDING MISSILE)
	13 - MISSILE	1 - MISSILE
	36 - MISSILE CONTROL UNIT	6 - MISSILE CONTROL UNIT (AIRBORNE)
	SURFACE (MARITIME)	
ENVIRONMENT/CATEGORY	PLATFORM	PLATFORM
3 - SURFACE (MARITIME)	0 - NO STATEMENT	3 - SURFACE
	33 - MISSILE CONTROL UNIT	7 - MISSILE CONTROL UNIT (SURFACE/ SUBSURFACE)
	SUBSURFACE (MARITIME)	
ENVIRONMENT/CATEGORY	PLATFORM	PLATFORM
4 - SUBSURFACE (MARITIME)	0 - NO STATEMENT	4 - SUBSURFACE (SUBMARINE)
	LAND (GROUND) PLATFORM	
ENVIRONMENT/CATEGORY	PLATFORM	PLATFORM
5 - LAND (GROUND)	0 - NO STATEMENT	5 - LAND

5. The J14.0 Parameter Source field is determined from the M.86B Report Source field as follows:

Link 16	Link 11/11B
PARAMETER SOURCE	REPORT SOURCE
5 - REPORT SOURCE, RADIO DIRECTION FINDING	1 - RDF
6 - REPORT SOURCE, OTHER	0 - ES (OTHER THAN RDF)

6. Bearing Accuracy is determined as follows:

APPENDIX C

TABLE C.5.2-J14.0-3. J14.0 Message Data Element Translation from the M.6B/M.86B/M.6C/M.86C Message (Sheet 8 of 8)

NOTES (Continued)

6. (Continued)

<u>Link 16</u>	<u>Link 11/11B</u>
<u>BEARING ACCURACY (NO STATEMENT)</u>	<u>BEARING ACCURACY</u>
0(NO STATEMENT)	0(NO STATEMENT)
1(> 10.0 DEGREES)	3(= OR > 10 DEGREES)
2(<= 10.0 DEGREES)	2(< 10 DEGREES)
6(<= 2.0 DEGREES)	1(< 2 DEGREES)

7. Link 11/11B Bearing is in 360/512 degree increments, and Link 16 Bearing is in 360/4096 degree increments. Translate Link 11/11B to the nearest Link 16 increment (.5 rounded up)

8. When the M.6C PRF Scaling (PS) = 1, the J14.0C4 Pulse Repetition Frequency (PRF) = M.6C PRF. When M.6C PS = 0, J14.0C4 PRF shall forward the decimal equivalents of M.6C PRF, except that M.6C PS = 0, PRF = 131,071 shall be translated to J14.0C4 PRF = 8388607 (131,071 PPS or greater). When M.6C PS = 2, the M.6C PRF shall be rounded to the nearest 0.1 PPS (0.05 being rounded up), then J14.0C4 PRF shall be forwarded as M.6C PRF.

9. Link 11/11B Pulse Width is in .1 microsecond increments, and Link 16 Pulse Width is in .05 microsecond increments. Translate Link 11/11B to the equivalent Link 16 increment.

10. The Antenna Scan Rate/Period Indicator is determined from the M.86C Switch field as follows:

<u>Link 16</u>	<u>Link 11/11B</u>
<u>ANTENNA SCAN RATE/PERIOD INDICATOR</u>	<u>SWITCH</u>
1 - PRIMARY ANTENNA SCAN RATE BEING REPORTED	1 - SCAN RATE REPORTED
2 - ANTENNA SCAN PERIOD BEING REPORTED	0 - ANTENNA SCAN PERIOD REPORTED

11. If Report Source = 0, the M.86B has no Platform Evaluation Confidence field and J14.0 Platform Evaluation Confidence shall be transmitted as value 0. If Report Source = 1, J14.0 Platform Evaluation Confidence equates to M.86B Platform Evaluation Confidence.

		<u>VALUE</u>	<u>REQUIRED</u>	<u>MESSAGE</u>
J14.2C7	NOT TRANSLATED			
J14.2C8	NOT TRANSLATED			

APPENDIX C

TABLE C.5.2-J14.2. J14.2 Message Data Element Translation from the
M.6D/M.86D Message (Sheet 5 of 7)

NOTES

1. M.6D messages with Control = 8, 9, 10, or 11 are not addressed and do not contain a TN, Addressee field. When forwarded to Link 16 in a J14.2 message, J14.2I Track Number, Addressee shall be set to 00177 (octal).

2. Electronic Warfare Action Value (EWAC) is determined from M.6D Control as follows:

Link 16	Link 11/11B
ELECTRONIC WARFARE ACTION VALUE	CONTROL
0 - REQUEST PERIODIC REPORT	0 - REQUEST PERIODIC REPORT
1 - REQUEST AUTOMATIC EVALUATION	1 - REQUEST AUTOMATIC EVALUATION
2 - REQUEST MANUAL EVALUATION	2 - REQUEST MANUAL EVALUATION
3 - REQUEST UPDATE AND WATCH	3 - REQUEST UPDATE THEN WATCH
4 - REQUEST DIRECTED SEARCH	4 - REQUEST DIRECTED SEARCH
5 - CANCEL REQUEST	5 - REQUEST DIRECTED SECTOR SEARCH
7 - EMITTER EVALUATION	7 - CANCEL REQUEST/CEASE REPORT
8 - PARAMETER ASSOCIATION	8 - EMITTER EVALUATION
9 - EMITTER ASSOCIATION	9 - PARAMETER ASSOCIATION
10 - DISASSOCIATION	10 - EMITTER ASSOCIATION
11 - NO FIND	11 - DISASSOCIATION
12 - RESPONSE TO AN ELECTRONIC WARFARE REQUEST	12 - NO FIND
13 - EVALUATE TRACK	13 - RESPONSE TO EW REQUEST
14 - EVALUATE SECTOR	14 - EVALUATE TRACK
	15 - EVALUATE SECTOR

3. When M.6D Control = 15, Track Number is Not Used and J14.2I Track Number (TN), Reference shall be set to 00000. When M.6D Control = 13, J14.2I TN, Reference is translated from M.6D Response Track Number. For all other Control values, J14.2I TN, Reference is translated from M.6D Track Number.

4. When M.6D Control = 5, 14, or 15, J14.2I Sector/Area/Location Indicator (S/A/L) shall be set to value 1 (Sector). For all other Control values, S/A/L shall be set at 0 (No Statement).

5. When M.6D Control = 8-13, the M.6D has no Receipt/Compliance (R/C) field and J14.2I R/C shall be set to 1. For all other Control values, R/C is determined as follows:

APPENDIX C

TABLE C.5.2-J14.2. J14.2 Message Data Element Translation from the
M.6D/M.86D Message (Sheet 6 of 7)

NOTES (Continued)

5. (Continued)

Link 16	Link 11
RECEIPT/COMPLIANCE	RECEIPT/COMPLIANCE
0 - ORIGINAL ORDER	0 - ORIGINAL ORDER - RECEIPT/ COMPLIANCE REQUIRED
1 - ORIGINAL ORDER	1 - ORIGINAL ORDER - NO RECEIPT/ COMPLIANCE REQUIRED
6 - CANTCO (CANNOT COMPLY)	3 - CANTCO
7 - CANTPRO (CANNOT PROCESS)	2 - CANTPRO

6. Time Duration is determined from M.6D Report Duration as follows:

Link 16	Link 11
TIME DURATION	REPORT DURATION
0 - NO STATEMENT	0 - ONE REPORT REGARDLESS OF TIME
12 - 1 MINUTE	1 - 1 MINUTE
13 - 5 MINUTES	2 - 5 MINUTES
14 - 20 MINUTES	3 - 20 MINUTES

7. If M.6D Control $\neq$ 9 or 10, J14.2E0 TN, Associated shall be set to 00000. When M.6D Control = 9 or 10, J14.2E0 TN, Associated is translated from M.6D Associated TN.

8. If M.6D Control $\neq$ 7, 12, or 13, J14.2E0 Reference EWAC shall be set to 63. When M.6D Control = 7, 12, or 13, Reference EWAC is determined from M.6D Referenced or Canceled Control Value as follows:

Link 16	Link 11/11B
REFERENCE ELECTRONIC WARFARE ACTION VALUE	CONTROL
0 - REQUEST PERIODIC REPORT	0 - REQUEST PERIODIC REPORT
1 - REQUEST AUTOMATIC EVALUATION	1 - REQUEST AUTOMATIC EVALUATION
2 - REQUEST MANUAL EVALUATION	2 - REQUEST MANUAL EVALUATION
3 - REQUEST UPDATE AND WATCH	3 - REQUEST UPDATE THEN WATCH
4 - REQUEST DIRECTED SEARCH	4 - REQUEST DIRECTED SEARCH
	5 - REQUEST DIRECTED SECTOR SEARCH
13 - EVALUATE TRACK	14 - EVALUATE TRACK
14 - EVALUATE SECTOR	15 - EVALUATE SECTOR

APPENDIX C

TABLE C.5.2-J14.2. J14.2 Message Data Element Translation from the
M.6D/M.86D Message (Sheet 7 of 7)

NOTES (Continued)

9. When M.6D Control $\neq$ 8-13, the M.6D has no EWC Indicator, and the J14.2E0 EWC Indicator shall be set to default value 0. When M.6D Control = 8-13, the M.6D EWC Indicator equates to the J14.2 EWC Indicator.

10. The J14.2C1 word is only translated when M.6D Control = 5, 14, or 15. When Control = 5, M.86D Bearing equates to J14.2C1 Bearing and TN, Origin shall be set to the TN of M.6D TN Addressee. When Control = 14, Bearing and TN, Origin shall be set to value 0. When Control = 15, M.6D Bearing equates to J14.2C1 Bearing and TN, Origin shall be set to value 0. Bearing Origin must be set to default value 0 in all cases, since no bearing origin is specified in the M.6D or M.86D.

11. When M.6D Control = 14 or 15, Link 11 Bearing Width is defined as the total width of the sector centered on the specified bearing, whereas Link 16 Sector Width is defined as the number of degrees on each side of the bearing. Therefore, Link 16 Sector Width is half the Link 11 Bearing Width, and Sector Width is determined from M.6D Bearing Width as follows:

Link 16	Link 11/11B
SECTOR WIDTH	BEARING WIDTH
3 - 3 DEGREES	0 - 5 DEGREES
5 - 5 DEGREES	1 - 10 DEGREES
10 - 10 DEGREES	2 - 20 DEGREES
15 - 15 DEGREES	3 - 30 DEGREES
23 - 23 DEGREES	4 - 45 DEGREES
45 - 45 DEGREES	5 - 90 DEGREES
90 - 90 DEGREES	6 - 180 DEGREES
180 - 180 DEGREES	7 - 360 DEGREES

When M.6D Control = 5, M.86D Sector Width equates to J14.2C1 Sector Width.

12. When M.6D Control = 5, M.86D Emitter Number equates to J14.2C3 Emitter Number in accordance with General Note 15. When M.6D Control = 8, M.6D Emitter Number equates to J14.2C3 Emitter Number in accordance with General Note 15.

NOTES

1. Reference/Position Indicator must be set to 1 indicating the SCC position. This SCC is that of the FJU.
2. On Link 11, the Special Processing Indicator (SPI) of the M.1 message shall be set to the appropriate value for the data following the M.1 message. If the same data source reports both non-SPI and SPI data, the non-SPI M.1 message and data are followed by the SPI M.1 message data.
3. The reported Delta Latitude and Delta Longitude are the offsets showing position of the FJU's SCC referenced to the DLRP. The actual position of the forwarded IU is reported in an M.5 message referenced to the FJU's SCC. All other positional data forwarded by the FJU are also referenced to the FJU's SCC.
4. An M.81 message is forwarded only on Link 11, and then only when Unit Type is reported in the J2.0 message.
5. The Height/Depth field of the M.81 message shall be set to 0 for Originator Environment/Category of 0.

APPENDIX C

TABLE C.5.2-M.1-3. M.1/M.81 Message Data Element Translation from the J2.3 Message (Sheet 2 of 2)

NOTES

1. Reference/Position Indicator must be set to 1 indicating the SCC position. This SCC is that of the FJU.
2. On Link 11, the Special Processing Indicator (SPI) of the M.1 message shall be set to the appropriate value for the data following the M.1 message. If the same data source reports both non-SPI and SPI data, the non-SPI M.1 message and data are followed by the SPI M.1 message data.
3. The reported Delta Latitude and Delta Longitude are the offsets showing position of the FJU's SCC referenced to the DLRP. The actual position of the forwarded IU is reported in an M.5 message referenced to the FJU's SCC. All other positional data forwarded by the FJU are also referenced to the FJU's SCC.
4. The M.81 Unit Type is derived from the J2.3 Surface (Maritime) Platform as follows:

Link 11
UNIT TYPE
0 - NO STATEMENT
2 - AIRCRAFT CARRIER
3 - CRUISER
4 - DD/ESCORT (AAW)
7 - FAST PATROL BOAT
8 - LHA/LHD
9 - LCC
10 - FRIGATE
11 - MINE WARFARE VESSEL
12 - AUXILIARY

Link 16

APPENDIX C

TABLE C.5.2-M.2-1. M.2/M.82 Message Data Element Translation from the J2.2 Message (Sheet 2 of 3)

NOTES

1. The M.2 Identity shall be set to Friend for all J2.2 messages that are forwarded.

2. The Scale Indicator (SI) in the M.2 message may be utilized as follows:

- o SI = 0 Tracks are reported in 500-yard increments up to 512 data miles.
- o SI = 1 Tracks are reported in 31 1/4-yard increments up to 32 data miles.

The Height field in the M.82 message is determined by the Scale Indicator in the M.2 message as follows:

- o SI = 0 Tracks are reported in 500-foot increments up to 127,000 feet.
- o SI = 1 Tracks are reported in 31 1/4-foot increments up to 7,937 1/2 feet.

The FJU may forward all tracks with Scale Indicator set to 0.

3. The Track Quality shall be set to 7 by the FJU.

4. The J2.2 altitude reported in excess of 127,000 feet shall be forwarded as Unknown.

5. The M.82 Switch shall always be set to 0 since a J2.2 message will never be forwarded as a nonreal-time track.

6. The Strength field values in the J2.2 message will be converted to the Size values in the M.82 message as follows:

APPENDIX C

TABLE C.5.2-M.2-2. M.2/M.82 Message Data Element Translation from the J3.2 Message (Sheet 3 of 4)

NOTES

1. If Air Specific Type Indicator is received as value 1, Link 11/11B PRI AMP and ID AMP fields will be set to No Statement, except when data other than No Statement is held in the FJU database, in which case data held will be forwarded. In all cases data shall be forwarded in accordance with General Note 20.

2. The Scale Indicator in the M.2 message may be utilized as follows:

- o SI = 0 Tracks are reported in 500-yard increments up to 511 3/4 data miles.
- o SI = 1 Tracks are reported in 31 1/4-yard increments up to 32 data miles.

The Height field in the M.82 message is determined by the Scale Indicator in the M.2 message as follows:

- o SI = 0 Tracks are reported in 500-foot increments up to 127,000 feet.
- o SI = 1 Tracks are reported in 31 1/4-foot increments up to 7,937 1/2 feet.

The FJU may forward all tracks with the Scale Indicator set to 0.

3. The Track Quality values 0-7 in the J3.2 message will be reported as identical values in the M.2 message on Link 11/11B. All other Track Quality values (8-15) in the J3.2 message will be converted to a Track Quality of 7 in the M.2 message.

4. The J3.2 altitude reported in excess of 127,000 feet shall be forwarded as Unknown.

APPENDIX C

TABLE C.5.2-M.2-2. M.2/M.82 Message Data Element Translation from the J3.2 Message (Sheet 4 of 4)

NOTES (Continued)

5. The Switch (SW) in the M.82 message determines when the M.82 message will contain Time or Velocity (X Dot, Y Dot). Time is transmitted for nonreal-time tracks (NRT) only. If the J3.2 message reports an NRT and velocity is available, the FJU will transmit an M.2/M.82 (SW=1) message reflecting time, followed by a second M.2/M.82 (SW=0) message reflecting velocity.

6. The Strength field values in the J3.2 message will be converted to the Size values in the M.82 message as follows:

Link 11/11B	Link 16
SIZE	STRENGTH
0	0
1	1
2	2-7, 13
3	8-12, 14, 15

APPENDIX C

TABLE C.5.2-M.2-3. M.2/M.82 Message Data Element Translation from the J3.6 Message (Sheet 3 of 4)

NOTES

1. The FJU shall provide the Link 11/11B Track Number from its TN pool.
2. If the Link 16 Exercise Indicator = 0, ID, PRI AMP, and ID AMP are translated from Identity as follows:

Link 11/11B		Link 16	
IDENTITY	PRIMARY IDENTITY AMPLIFICATION	IDENTITY AMPLIFICATION	IDENTITY
0 - UNKNOWN	0 - PENDING	0 - NO STATEMENT	0 - PENDING
	1 - UNKNOWN	0 - NS	1 - UNKNOWN
	2 - ASSUMED FRIEND	0 - NS	2 - ASSUMED FRIEND
	3 - SUSPECT	0 - NS	5 - SUSPECT
1 - FRIEND	0 - GENERAL	1 - NEUTRAL	4 - NEUTRAL
		3 - MISSILE	3 - FRIEND
2 - HOSTILE	0 - GENERAL	1 - MISSILE	6 - HOSTILE

If the Link 16 Exercise Indicator = 1, ID is set to 1 (Friend), PRI AMP is set to 0 (General), and ID AMP is set to 3 (Missile).

3. The Scale Indicator in the M.2 message may be utilized as follows:
 - o SI = 0 Tracks are reported in 500-yard increments up to 511 3/4 data miles.
 - o SI = 1 Tracks are reported in 31 1/4-yard increments up to 31 63/64 data miles.

The FJU may forward all tracks with the Scale Indicator set to 0.

4. The Link 11/11B Track Quality field is set artificially to a TQ of 1.
5. The Link 11/11B position (X Coordinate and Y Coordinate) is derived from the J3.6E0 X Position in WGS-84, J3.6E0 Y Position in WGS-84 and J3.6E1 Z Position in WGS-84 fields.

APPENDIX C

TABLE C.5.2-M.2-3. M.2/M.82 Message Data Element Translation from the J3.6
Message (Sheet 4 of 4)

NOTES (Continued)

6. The Link 11/11B course and speed (X Dot and Y Dot) are derived from the J3.6E0 X Velocity in WGS-84, J3.6E1 Y Velocity in WGS-84 and J3.6E1 Z Velocity in WGS-84 fields.

1. The M.3 Identity shall be set to Friend for all J2.3 messages that are forwarded.

2. The M.3 Scale Indicator is determined as follows:

- o SI = 0 Tracks are reported in 31 1/4-yard increments up to 32 data miles.
- o SI = 1 Tracks are reported in 500-yard increments up to 511 3/4 data miles.

The FJU may forward all tracks with SI = 1.

3. The Track Quality shall be set to 7 by the FJU.

4. The J2.3C1 Surface (Maritime) Platform Activity will be translated to the M.83 Current Mission as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>CURRENT MISSION</u>	<u>SURFACE (MARITIME) PLATFORM ACTIVITY</u>
0	0-4, 7, 9-11, 15-17, 20, 21, 24-27, 29, 31, 34, 35, 38-127
1	23
2	18
3	12
4	30
5	8, 36, 37
6	22
7	6, 32, 33
8	14
9	19
10	28
11	13
13	5

5. The M.83 Switch shall always be set to 0 since a J2.3 message will never be forwarded as a nonreal-time track.

TABLE C.5.2-M.3-2. M.3/M.83 Message Data Element Translation from the J3.3 Message (Sheet 3 of 5)

NOTES

1. The Scale Indicator in the M.3 message is determined as follows:

- o SI = 0 Tracks are reported in 31 1/4-yard increments up to 32 data miles.
- o SI = 1 Tracks are reported in 500-yard increments up to 512 data miles.

The FJU may forward all tracks with the Scale Indicator set to 1.

2. The J3.3I Track Quality (TQ) values 0-7 will be reported as identical values in the M.3 on Link 11/11B. All other J3.3I TQ values (8-15) will be converted to M.3 TQ of 7.

3. The J3.3C1 Surface (Maritime) Platform Activity will be translated to the M.83 Current Mission as follows:

APPENDIX C

TABLE C.5.2-M.4A-1. M.4A/M.84A Message Data Element Translation from the J2.4 Message (Sheet 3 of 5)

NOTES

1. The M.4A Identity shall be set to Friend for all J2.4 messages that are forwarded.
2. The Data Report Type shall be set to value 0 (Subsurface Track) for all J2.4 messages that are forwarded when Depth Category is set to a value other than 1 (Surfaced). If Depth Category is set to Surfaced, then Data Report Type shall be set to value 1 (Surfaced Submarine).
3. The Nonreal-Time Indicator (NRT) shall be set to No Statement for all J2.4 messages that are forwarded.
4. The Scale Indicator in the M.4A is determined as follows:
 - o SI=0 Tracks are reported in 31 1/4 yard increments up to 32 data miles.
 - o SI=1 Tracks are reported in 500 yard increments up to 512 data miles.

The FJU may forward all tracks with the Scale Indicator set to 1.

5. The unit position is translated from the J2.4E0 if the Displaced Position Indicator is set to 0 and from the J2.4C4 if the Displaced Position Indicator is set to 1.
6. When Data Report Type in the M.4A equals 0 or 1, this field is Spare.
7. The Classification shall be set to Certain Submarine for all J2.4 messages that are forwarded.
8. The M.84A Classification Amplification field is determined from the J2.4C1 Subsurface (Maritime) Platform as follows:

APPENDIX C

NOTES (Continued)

10 - BOTTOMED	10 - BOTTOMED

When the J2.4 Depth, 15 Meters field is set to other than No Statement, the Depth Indicator shall be set to value 0. Depth shall be translated in accordance with General Note 11.

11. The M.84A Speed is in 1 data mile per hour increments; and the J2.4E0 Speed is in 0.5 data mile per hour increments. The J2.4E0 Speed values 0-252 (0-126 data miles per hour) shall be translated to the equivalent M.84A Speed, with 0.5 data mile per hour increments arbitrarily rounded to the higher data mile. The J2.4E0 Speed values 253-510 (126.5-255 data miles per hour) shall be translated to the M.84A Speed value 126 (126 data miles per hour). The J2.4E) Speed value 511 (No Statement) shall be translated to M.84A Speed value 127 (No Statement).

12 - NOTACK AREA		6 - NOTACK AREA
13 - FRIENDLY WEAPON DANGER AREA (FWDA)		13 - FRIENDLY WEAPON DANGER AREA (FWDA)

2. The Scale Indicator in the M.4A message is determined as follows:

- o SI=0 Tracks are reported in 31 1/4 yard increments up to 32 data miles.
- o SI=1 Tracks are reported in 500-yard increments up to 511 3/4 data miles.

The FJU may forward all tracks with SI=1.

3. The M.84A Course/Bearing and Course/Bearing Indicator (CBI) fields are determined by the J3.0 Course field as follows:

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.4A-2. M.4A/M.84A Message Data Element Translation from the J3.0 Message (Sheet 4 of 6)

NOTES (Continued)

3. (Continued)

Link 11/11B		Link 16
COURSE/BEARING		
INDICATOR	COURSE/BEARING	COURSE
0	0 (NOT INTERPRETED)	360-510 - ILLEGAL
1	0-255 - 0 THROUGH 358 152/256 DEGREES	511 - NO STATEMENT 0-359 - 0 THROUGH 359 DEGREES

Link 16 Course is in 1 degree increments, and Link 11/11B Course/Bearing is in 360/256 degree increments. Translate Link 16 to the nearest Link 11/11B increment (.5 rounded up).

4. The NOTACK Duration will be interpreted from the J3.0I Time Function, Minute, and Hours fields. Two J3.0 messages are required to report a NOTACK Area. One message contains the time of activation and the other message contains the time of deactivation. NOTACK Duration shall be forwarded after both J3.0 messages have been received. The NOTACK Duration is determined by subtracting the Activation Time from the Deactivation Time (DT-AT). If both J3.0 messages are not received within 12 seconds, NOTACK Duration shall be forwarded as value 3, 2 hours.

Link 11/11B	Link 16	
NOTACK DURATION	HOUR	MINUTE
0 - 1 HOUR	0	31-59
	1	0
1 - 30 MINUTES	0	0-30
2 - 1 HOUR 30 MINUTES	1	1-30
3 - 2 HOURS	1	31-59
	2-23	ANY

5. When J3.0I Point Amplification = 6 and a value of 1 or 2 is received in the J3.0C2 Square/Circle Switch field, the area will be interpreted as a circle with the NOTACK Radius determined from the Area Major Axis and Area Minor Axis field, whichever is larger, as follows:

APPENDIX C

TABLE C.5.2-M.4A-2. M.4A/M.84A Message Data Element Translation from the J3.0 Message (Sheet 5 of 6)

NOTES (Continued)

5. (Continued)

Link 11/11B	Link 16	
NOTACK RADIUS	AREA MAJOR AXIS	AREA MINOR AXIS
0 - 10 DM	3 (12 DM)	3 (12 DM)
	63 - NO STATEMENT	63 - NO STATEMENT
1 - 5 DM	0 (0 DM)	0 (0 DM)
	1 (4 DM)	1 (4 DM)
	2 (8 DM)	2 (8 DM)
2 - 15 DM	4 (16 DM)	4 (16 DM)
3 - 20 DM	5 (20 DM)	5 (20 DM)
	6-62 (24-248 DM OR MORE)	6-62 (24-248 DM OR MORE)

6. The M.84A Speed is in 1 data mile per hour increments, and the J3.0C2 Speed is in 2 data mile per hour increments. The J3.0C2 Speed values 0-63 (0-126 data miles per hour) shall be translated to the equivalent M.84A Speed. The J3.0C2 Speed values 64-2046 (128-4092 data miles per hour) shall be translated to the M.84A Speed value 126 (126 data miles per hour). The J3.0C2 Speed value 2047 (No Statement) shall be translated to M.84A Speed value 127 (No Statement).

7. The FWDA Duration will be interpreted from the J3.0I Time Function, Minute, and Hour fields. Two J3.0 messages are required to report a FWDA. One message contains the time of activation and the other message contains the time of deactivation. FWDA Duration shall be forwarded after both J3.0 messages have been received. The FWDA Duration is determined by subtracting the Activation Time from the Deactivation Time (DT-AT). If both J3.0 messages are not received within 12 seconds, FWDA Duration shall be forwarded as value 31, 155 minutes.

FWDA Duration is reported in 5 minute increments with a maximum value of 155 minutes. Translate Link 16 DT-AT to the nearest Link 11/11B increment, rounding up.

APPENDIX C

TABLE C.5.2-M.4A-3. M.4A/M.84A Message Data Element Translation from the J3.4 Message (Sheet 3 of 7)

NOTES

1. If J3.4 Exercise Indicator = 1, translate all identities to M.4A Identity = Friend. If J3.4 Exercise Indicator = 0, the M.4A Identity field is determined as follows:

Link 11/11B	Link 16
IDENTITY	IDENTITY
0 - NO STATEMENT/PENDING	0 - PENDING
1 - FRIEND	7 - UNDEFINED
2 - HOSTILE	3 - FRIEND
3 - UNKNOWN	4 - NEUTRAL
	6 - HOSTILE
	1 - UNKNOWN
	2 - ASSUMED FRIEND
	5 - SUSPECT

2. The Link 11/11B Data Report Type field will be determined as follows:

Link 11/11B	Link 16
DATA REPORT TYPE	DATA REPORT TYPE
0 - SUBSURFACE TRACK	0 - SUBSURFACE TRACK
1 - SURFACED SUBMARINE	2 - SNORKELING SUBMARINE
2 - DATUM	1 - SURFACED SUBMARINE
	4 - DATUM

3. The M.4A Nonreal-Time Indicator (NRT) is determined from the J3.4C1 Time Function, ASW field as follows:

Link 11/11B	Link 16
NONREAL-TIME INDICATOR	TIME FUNCTION, ASW
0 - NO STATEMENT	1 - TIME CONTACT FIRST ACQUIRED/ TIME DATUM ESTABLISHED
1 - NONREAL-TIME TRACK DATA	3 - TIME CONTACT LOST
	0 - NO STATEMENT
	2 - TIME OF CURRENT POSITIONAL DATA

4. The Scale Indicator in the M.4A is determined as follows:

- o SI=0 Tracks are reported in 31 1/4 yard increments up to 32 data miles.

APPENDIX C

TABLE C.5.2-M.4A-3. M.4A/M.84A Message Data Element Translation from the J3.4 Message (Sheet 4 of 7)

NOTES (Continued)

4. (Continued)

- o SI=1 Tracks are reported in 500 yard increments up to 512 data miles.

The FJU may forward all tracks with the Scale Indicator set to 1.

5. When Data Report Type in the M.4A equals 0-2, this field is Spare.

6. If the J3.4I Confidence Level is other than value 2-5, this M.84A field is Spare and shall be set to value 0. If J3.4I Confidence Level = 2-5, Possible Submarine is determined from Confidence Level as follows:

Link 11/11B	Link 16
POSSIBLE SUBMARINE	CONFIDENCE LEVEL
1 - POSSIBLE SUBMARINE 1	2 - POSSIBLE SUBMARINE LOW ONE
2 - POSSIBLE SUBMARINE 2	3 - POSSIBLE SUBMARINE LOW TWO
3 - POSSIBLE SUBMARINE 3	4 - POSSIBLE SUBMARINE HIGH THREE
4 - POSSIBLE SUBMARINE 4	5 - POSSIBLE SUBMARINE HIGH FOUR

7. The M.84A Classification and Classification Amplification fields are determined from the J3.4I Confidence Level and Subsurface (Maritime) Platform as follows:

Link 11/11B	Link 16
CLASSIFICATION	SUBSURFACE (MARITIME) PLATFORM
0	ALL EXCEPT 20
1	ALL EXCEPT 20
	0, 18, 19, 21-27, 30-32, 38-63
	1, 28, 29
	2-8, 35, 36
	9-17, 33, 34, 37

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.4A-3. M.4A/M.84A Message Data Element Translation from the J3.4 Message (Sheet 5 of 7)

NOTES (Continued)

7. (Continued)

<u>Link 11/11B</u>		<u>Link 16</u>	
<u>CLASSIFICATION</u>	<u>CLASSIFICATION AMPLIFICATION</u>	<u>CONFIDENCE LEVEL</u>	<u>SUBSURFACE (MARITIME) PLATFORM</u>
2	0	6	0, 18, 19, 21-27, 30-32, 38-63

	5		21
	6		25
	7		27
6	0	ALL	23
			20

8. The M.84A Course/Bearing and Course/Bearing Indicator (CBI) fields are determined by the J3.4E0 Course field as follows:

<u>Link 11/11B</u>		<u>Link 16</u>
<u>COURSE/BEARING INDICATOR</u>	<u>COURSE/BEARING</u>	<u>COURSE</u>
0	0 (NOT INTERPRETED)	360-510 - ILLEGAL
1	0-255 - 0 THROUGH 358 152/256 DEGREES	511 - NO STATEMENT 0-359 - 0 THROUGH 359 DEGREES

Link 16 Course is in 1 degree increments, and Link 11/11B Course/Bearing is in 360/256 degree increments. Translate Link 16 to the nearest Link 11/11B increment (.5 rounded up).

APPENDIX C

TABLE C.5.2-M.4A-3. M.4A/M.84A Message Data Element Translation from the J3.4 Message (Sheet 6 of 7)

NOTES (Continued)

9. When J3.4I Data Report Type = 0 or 1, and information is reported in the J3.4C1 Depth Contact, the information shall be forwarded in the M.84A Depth field with the M.84A Depth Indicator (DI) field set to one. The Depth field will be determined as follows:

Link 11/11B	Link 16
DEPTH	DEPTH CONTACT
0 - UNKNOWN/NO STATEMENT	0 - NO STATEMENT
	6 - UNKNOWN
	8-15 - UNDEFINED
2 - ESTIMATED SHALLOW	1 - ESTIMATED SHALLOW
3 - PERISCOPE DEPTH	7 - PERISCOPE DEPTH
4 - ABOVE FIRST LAYER	2 - ABOVE LAYER
8 - BELOW BOTTOM LAYER	3 - BELOW LAYER
9 - ESTIMATED DEEP	4 - ESTIMATED DEEP
10 - BOTTOMED	5 - BOTTOMED

When J3.4I Data Report Type =2 (Snorkeling Submarine), the M.84A Depth Indicator and Depth fields shall be set to value 1 (Snorkeling).

When other than No Statement is reported in the J3.4C1 Depth, 15 meters field, set Depth Indicator to 0 and translate Depth in accordance with General Note 11. J3.4C1 Depth greater than 63 shall be translated to M.84A Depth = 63.

If neither J3.4C1 Depth Contact = 1-5 nor Depth, 15 Meters = 0-126, the M.84A Depth Indicator shall be set to value 1 and M.84A Depth shall be set to value 0.

If both J3.4C1 Depth Contact = 1-5 and J3.4C1 Depth, 15 Meters = 0-126, an M.4A/M.84A(DI=0) message sequence shall be transmitted, followed by an M.4A/M.84A(DI=1) message sequence.

10. The Sensor field will be determined as follows:

APPENDIX C

TABLE C.5.2-M.4A-3. M.4A/M.84A Message Data Element Translation from the J3.4 Message (Sheet 7 of 7)

NOTES (Continued)

11. The M.84A Speed is in 1 data mile per hour increments, and the J3.4E0 Speed is in 0.5 data mile per hour increments. The J3.4E0 Speed values 0-252 (0-126 data miles per hour) shall be translated to the equivalent M.84A Speed, with 0.5 data mile per hour increments arbitrarily rounded to the higher data mile. The J3.4E0 Speed values 253-510 (126.5-255 data miles per hour) shall be translated to the M.84A Speed value 126 (126 data miles per hour). The J3.4E0 Speed value 511 (No Statement) shall be translated to M.84A Speed value 127 (No Statement).

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.4C. M.4C/M.84C Message Data Element Translation from Link 16
(Sheet 2 of 3)

NOTES

1. The M.4C Switch is determined from the J3.0I Point Amplification field when Point Type = 7 as follows:

Link 11	Link 16
SWITCH	POINT AMPLIFICATION
2 - SONOBUOY POSITION	9 - SONOBUOY POSITION
3 - REFERENCE SONOBUOY POSITION	10 - SONOBUOY PATTERN REFERENCE POSITION

2. The Scale Indicator field in the M.4C message is determined as follows:

- o SI=0 Tracks are reported in 31 1/4 yard increments up to 32 data miles.
- o SI=1 Tracks are reported in 500 yard increments up to 511 3/4 data miles.

The FJU may forward all tracks with Scale Indicator set to 1.

3. If Channel Number, Sonobuoy RF = 0-31, M.84C Channel Number shall equate to Channel Number, Sonobuoy RF. Otherwise, M.84C Channel Number shall be set to value 0. The M.84C Channel Amplify shall equate to Channel Number, Sonobuoy RF.

4. The Type, Type, 1 and Sonobuoy Switch fields are determined from the J3.0C3 Sonobuoy Type and/or J3.0C4 Sonobuoy Type, 1 fields as follows:

Link 11/11B	Link 16
SONOBUOY SWITCH	SONOBUOY TYPE
0	0 - NO STATEMENT

APPENDIX C

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.4D. M.4D/M.84D Message Data Element Translation from Link 16
(Sheet 3 of 8)

NOTES

1. If J5.4 Exercise Indicator = 1, translate to M.4D Identity = Friend. If J5.4 Exercise Indicator = 0, the M.4D Identity field is determined as follows:

Link 11	Link 16
IDENTITY	IDENTITY
0 - NO STATEMENT/PENDING	0 - PENDING
1 - FRIEND	7 - UNDEFINED
2 - HOSTILE	3 - FRIEND
3 - UNKNOWN	4 - NEUTRAL
	6 - HOSTILE
	1 - UNKNOWN
	2 - ASSUMED FRIEND
	5 - SUSPECT

2. The M.4D B-Frame Switch determines whether the M.4D will contain the Track Number Originator and Sensor Depth (Switch = 3); or Source Acoustic Frequency, Broadband, Audio, Sound Propagation Path, Doppler and Above/Below Layer (Switch = 2); or position (X Coordinate, Y Coordinate) (Switch = 0 or 1). When position is reported, the B-Frame Switch is interpreted as follows:

- o BSW = 0 Tracks are reported in 31 1/4 yd. increments up to 32 data miles.
- o BSW = 1 Tracks are reported in 500 yd. increments up to 511 3/4 data miles.

When position is forwarded, the FJU may forward all tracks with the BSW set to one.

3. The M.4D Sound Propagation Path field is determined as follows:

APPENDIX C

TABLE C.5.2-M.4D. M.4D/M.84D Message Data Element Translation from Link 16
(Sheet 4 of 8)

NOTES (Continued)

3. (Continued)

Link 11	Link 16
SOUND PROPAGATION PATH	SOUND PROPAGATION PATH
0 - NO STATEMENT	0 - NO STATEMENT
	8 - MULTIPATH
	9-15 - UNDEFINED
1 - UNKNOWN	1 - UNKNOWN
2 - DIRECT PATH	2 - DIRECT PATH
3 - BOTTOM BOUNCE	3 - BOTTOM BOUNCE
4 - CONVERGENCE ZONE 1	4 - CONVERGENCE ZONE 1
5 - CONVERGENCE ZONE 2	5 - CONVERGENCE ZONE 2
6 - CONVERGENCE ZONE 3 OR BEYOND	6 - CONVERGENCE ZONE 3 OR BEYOND
7 - CONVERGENCE ZONE UNSPECIFIED	7 - CONVERGENCE ZONE UNSPECIFIED

4. Not used.

5. When J5.4C2 Depth, Sensor is an even value less than or equal to 40 (600 meters), M.4D Sensor Depth shall be set to the value whose meaning is equal to the received meaning. When J5.4C2 Depth, Sensor is an odd value less than or equal to 39 (585 meters), then the M.4D Sensor Depth shall be set to the data item whose meaning is 50 feet greater than the received meaning. For the J5.4C2 Depth, Sensor values greater than or equal to 41 (615 meters), the M.4D Sensor Depth shall be forwarded as value 20 (2000 feet), except for the J5.4C2 Depth, Sensor value 127 (No Statement) which shall be forwarded as value 31 (No Statement) in the M.4D Sensor Depth field.

6. The M.84D Bearing Accuracy field is determined as follows:

Link 11	Link 16
BEARING ACCURACY	BEARING ACCURACY, ASW (NO STATEMENT)
0(NO STATEMENT)	0(NO STATEMENT)
	9-15(UNDEFINED)
1(< = 2 DEGREES)	1(+ OR - 2 DEGREES)
2(< = 5 DEGREES)	2(+ OR - 5 DEGREES)
3(< = 10 DEGREES)	3(+ OR - 10 DEGREES)
4(< = 15 DEGREES)	4(+ OR - 15 DEGREES)
5(< = 20 DEGREES)	5(+ OR - 20 DEGREES)
6(< = 30 DEGREES)	6(+ OR - 30 DEGREES)
7(OVER 30 DEGREES)	7(+ OR - 45 DEGREES)
	8(OVER 45 DEGREES)

APPENDIX C

TABLE C.5.2-M.4D. M.4D/M.84D Message Data Element Translation from Link 16
(Sheet 5 of 8)

NOTES (Continued)

7. The M.84D Contact Depth field is determined from the J5.4C2 Depth Contact field as follows:

Link 11	Link 16
CONTACT DEPTH	DEPTH CONTACT
0 - UNKNOWN/NO STATEMENT	0 - NO STATEMENT
	6 - UNKNOWN
	8-15 - UNDEFINED
1 - ESTIMATED SHALLOW	1 - ESTIMATED SHALLOW
2 - ABOVE LAYER	2 - ABOVE LAYER
3 - BELOW LAYER	3 - BELOW LAYER
4 - ESTIMATED DEEP	4 - ESTIMATED DEEP
6 - PERISCOPE DEPTH	7 - PERISCOPE DEPTH
5 - BOTTOMED	5 - BOTTOMED

8. The M.84D Classification field is determined from the J5.4I Confidence Level field as follows:

Link 11/11B	Link 16
CLASSIFICATION	CONFIDENCE LEVEL
0 - NO STATEMENT/ UNCLASSIFIED	0 - NO STATEMENT
	1 - UNCLASSIFIED
1 - POSSUB 1	2 - POSSIBLE SUBMARINE LOW ONE
2 - POSSUB 2	3 - POSSIBLE SUBMARINE LOW TWO
3 - POSSUB 3	4 - POSSIBLE SUBMARINE HIGH THREE
4 - POSSUB 4	5 - POSSIBLE SUBMARINE HIGH FOUR
5 - PROBABLE SUBMARINE	6 - PROBABLE SUBMARINE
7 - CERTAIN SUBMARINE	7 - CERTAIN SUBMARINE
8 - NONSUBMARINE	8 - NON SUBMARINE
	9 - SURFACE VESSEL

9. The M.4D Classification and Classification Amplification fields are determined from the J5.4I Confidence Level and Subsurface (Maritime) Platform fields as follows:

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.5-1. M.5/M.85 Message Data Element Translation from the J2.0 Message (Sheet 2 of 2)

NOTES

1. The FJU may forward all positions with Scale Indicator = 0.
2. The Related TN/TN field contains the same TN as contained in the immediately preceding M.5 message. The Reference (REF) field shall be set to 0 to indicate that the track number in the M.5 message and the M.85 message are identical. Slaved Points that are indicated by REF = 1 or 2 are not used in this translation.
3. If necessary to report X Dot, Y Dot, and Height, a second M.5 message identical to the first will be transmitted, followed by a second M.85 message in which the alternate parameters are included. The Switch is set to 0 when Course and Speed are reported as other than No Statement. The Switch is set to 1 if Altitude, 25 Ft is other than No Statement.
4. Time other than No Statement in this message is not appropriate since this is a real-time report of a PU/RU's position.
5. Point Amplification is determined from Site as follows:

APPENDIX C

TABLE C.5.2-M.5-5. M.5/M.85 Message Data Element Translation from the J2.5 Message (Sheet 3 of 3)

NOTES

1. The FJU may forward all positions with the Scale Indicator = 0.
2. The Command and Control Indicator must be set to 1 in order for an M.5 message to be constructed. If the C² Indicator is set to 0 then the M.5 will not be sent.
3. The unit position is translated from the J2.5E0 if the Displaced Position Indicator is set to 0 and from the J2.5C4 if the Displaced Position Indicator is set to 1.
4. The Related TN/TN field contains the same TN as contained in the immediately preceding M.5 message. The Reference (REF) field shall be set to 0 to indicate that the track number in the M.5 message and the M.85 message is identical. Slaved Points that are indicated by REF = 1 or 2 are not used in this translation.
5. Time other than No Statement in this message is not appropriate since this is a real-time report of a JU's position.

3. If the J3.0I Slaved Indicator = 0, translate the M.5 X and Y Coordinates from the J3.0E0 Latitude and Longitude in accordance with General Note 9. If the J3.0I Slaved Indicator = 1, determine the Latitude and Longitude of the point by applying the J3.0C1 Delta Latitude, 0.0313 Minute 1 and Delta Longitude, 0.0313 Minute 1 to the position of the Related TN, if available

APPENDIX C

TABLE C.5.2-M.5-7. M.5/M.85 Message Data Element Translation from the J3.0 Message (Sheet 5 of 5)

NOTES (Continued)

3. (Continued)

from previous J2.x or J3.x messages, extrapolated to the time of receipt of this J3.0 message. Then translate the M.5 X and Y Coordinates from the resulting latitude and longitude of the J3.0 point in accordance with General Note 9. If the position of the Related TN is not available, the J3.0 message shall not be forwarded.

4. The Switch value is set to 0 when Course and Speed are reported as other than No Statement. The Switch value is set to 1 if Minute and Hour and/or Altitude, 100 Ft 1 are other than No Statement.

5. When the Slaved Indicator = 0, M.85 Track Number is translated from J3.0I Track Number, Reference, and M.85 Reference shall be set to value 0. When the Slaved Indicator = 1 and the J3.0C4 word is received, M.85 Related Track Number is translated from J3.0C4 Track Number, Related 1 and M.85 Reference shall be set to value 2. When the Slaved Indicator = 1 and the J3.0C4 word is not received, M.85 Related Track Number is translated from J3.0C2 Track Number, Related, and M.85 Reference shall be set to value 1.

6. Time Switch/Time Function Equivalence:

Link 11/11B	Link 16
TIME SWITCH	TIME FUNCTION
0	5
1	0-4, 6, 7

7. When the bit code value for Altitude, 100 Ft 2 in the J3.0E0 word is set to a value other than 1023, this data element represents a maximum altitude and Altitude, 100 Ft 1 represents a minimum altitude. Height/Depth Unknown will be forwarded when minimum/maximum altitudes are specified in the J3.0E0 word.

APPENDIX C

MIL-STD-6016B

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.6A-1. M.6A Message Data Element Translation from the J3.7 Message (Sheet 2 of 4)

NOTES

1. When translating to Broad Classification, Bearing Accuracy, Bearing, or TN of Origin, set Action value to 0. When translating to Threat Evaluation, Platform, Time Stale, Elevation, or Frequency, set Action value to 1. In order to forward all data received, two M.6A (ACT=0 and ACT=1) messages may have to be sent.

2. Bearing Accuracy is determined as follows:

Link 11/11B	Link 16
BEARING ACCURACY	BEARING ACCURACY (<= 1.0 DEGREES)
0(< 1 DEGREE)	7(<= 1.0 DEGREES)
	THROUGH
	15(<= 0.001 DEGREES)
1(< 2 DEGREES)	6(<= 2.0 DEGREES)
2(< 5 DEGREES)	3(<= 5.0 DEGREES)
	4(<= 4.0 DEGREES)
	5(<= 3.0 DEGREES)
3(> = 5 DEGREES/NO STATEMENT)	0(NO STATEMENT)
	1(> 10.0 DEGREES)
	2(<= 10.0 DEGREES)

3. When the J3.7I Exercise Indicator = 1, Threat Evaluation shall be set to 2, regardless of J3.7I Identity. When the J3.7I Exercise Indicator = 0, Threat Evaluation is determined from the J3.7I Identity field as follows:

Link 11/11B	Link 16
THREAT EVALUATION	IDENTITY
0 - PENDING	0 - PENDING
	7 - UNDEFINED
1 - UNKNOWN	1 - UNKNOWN
2 - NONTREAT/FRIEND	2 - ASSUMED FRIEND
	3 - FRIEND
	4 - NEUTRAL
3 - THREAT	5 - SUSPECT
	6 - HOSTILE

4. Platform is determined from the J3.7C1 Environment/Category and J3.7C4 Platform fields as follows:

MIL-STD-6016B

5. When translating to Frequency in the M.6A, set Switch to 0. When translating to Elevation in the M.6A, set Switch to 1. In order to forward both Frequency and Elevation, two M.6A(ACT=1, SW=0, and ACT=1, SW=1) messages must be sent.

APPENDIX C

TABLE C.5.2-M.6A-1. M.6A Message Data Element Translation from the J3.7
Message (Sheet 4 of 4)

NOTES (Continued)

6. Time Stale is determined from the J3.7I Hour, Minute and Second fields by subtracting Hour, Minute and Second from the estimated time of transmission of the forwarded M.6A message, to the nearest 0.25 second. If the result is greater than 31.5 seconds, or if Hour, Minute, or Second is received as No Statement, translate to Time Stale = 127, No Statement.

7. When J3.7C1 Elevation Angle/Altitude Indicator $\neq 1$ or Elevation Angle = 512 (No Statement), the M.6A(ACT=1) shall not be transmitted with Switch = 1. Otherwise J3.7 Elevation Angle equates to the M.6A Elevation field.

APPENDIX C

TABLE C.5.2-M.6A-2. M.6A Message Data Element Translation from the J14.0 Message (Sheet 2 of 4)

NOTES

1. When translating to Bearing Accuracy, Broad Classification, Bearing, or TN of Origin, set Action Value to 0. When translating to Threat Evaluation, Platform, Frequency, Jammer Received Signal Level, Elevation, Amplifying Characteristics, or Time Stale, set Action Value to 1. In order to forward all data received, two or three M.6A(ACT=0 and/or ACT=1, SW=0 and/or ACT=1, SW=1) messages may have to be sent.

2. Bearing Accuracy is determined as follows:

Link 11/11B	Link 16
BEARING ACCURACY	BEARING ACCURACY (<= 1.0 DEGREES)
0(< 1 DEGREE)	7(<= 1.0 DEGREES)
	THROUGH
	15(<= 0.001 DEGREES)
1(< 2 DEGREES)	6(<= 2.0 DEGREES)
2(< 5 DEGREES)	3(<= 5.0 DEGREES)
	4(<= 4.0 DEGREES)
	5(<= 3.0 DEGREES)
3(> = 5 DEGREES/NO STATEMENT)	0(NO STATEMENT)
	1(> 10.0 DEGREES)
	2(<= 10.0 DEGREES)

3. Threat Evaluation is determined as follows:

Link 11/11B	Link 16
THREAT EVALUATION	THREAT EVALUATION
0 - PENDING	0 - PENDING/NO STATEMENT
	5-7 - UNDEFINED
1 - UNKNOWN	1 - UNKNOWN
2 - NONTHREAT/FRIEND	2 - NON-THREAT
	4 - FRIEND
3 - THREAT	3 - THREAT

4. Platform is determined from the J14.0I Environment/Category and J14.0C5 Platform fields as follows:

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.6A-2. M.6A Message Data Element Translation from the J14.0 Message (Sheet 3 of 4)

5. If J14.0C1 Elevation Angle/Altitude Indicator (EL/ALT IND) $\neq$ 1 or Elevation Angle (EL ANG) = 512 (No Statement), and J14.0C4 Jammer Received Signal Level (JRSL) or J14.0I Amplifying Characteristics (AC) is not No Statement, the M.6A(ACT=1, SW=1) shall be transmitted with Elevation = 0 because there is not a No Statement value for M.6A Elevation. If J14.0C1 EL/ALT IND $\neq$ 1 or EL ANG = 512 and J14.0C4 JRSL and J14.0I AC are both No Statement, the M.6A shall not be transmitted with Switch = 1. Otherwise, J14.0C1 Elevation Angle equates to M.6A Elevation.

APPENDIX C

TABLE C.5.2-M.6A-2. M.6A Message Data Element Translation from the J14.0 Message (Sheet 4 of 4)

NOTES (Continued)

6. When translating to Frequency in the M.6A, set Switch to 0. When translating to Elevation in the M.6A, set Switch to 1. In order to forward both Frequency and Elevation, two M.6A(ACT=1, SW=0, and ACT=1, SW=1) messages must be sent.

7. Time Stale is determined from the J14.0I Hour, Minute and Second fields by subtracting Hour, Minute, and Second from the estimated time of transmission of the forwarded M.6A message, to the nearest 0.25 second. If the result is greater than 31.5 seconds, or if Hour, Minute, or Second is received as No Statement, translate to Time Stale = 127 (No Statement).

APPENDIX C

TABLE C.5.2-M.6B-1. M.6B/M.86B Message Data Element Translation from the J3.7 Message (Sheet 3 of 6)

NOTES

1. Fix or Bearing is determined from the J3.7I Fix or Bearing Descriptor as follows:

Link 11/11B	Link 16
FIX OR BEARING	FIX OR BEARING DESCRIPTOR
0 - BEARING	2 - BEARING, TYPE NOT SPECIFIED
	3 - BEARING, ES
	5 - BEARING, RADIO DIRECTION FINDING
1 - FIX	7 - BEARING, UNKNOWN
	0 - EW FIX

Link 16 values 1, 4, and 6 will not be forwarded in this message.

2. When J3.7I Exercise Indicator = 1, Threat Evaluation shall be set to 2 regardless of J3.7I Identity. When J3.7I Exercise Indicator = 0, Threat Evaluation is determined from the J3.7I Identity field as follows:

Link 11/11B	Link 16
THREAT EVALUATION	IDENTITY
0 - PENDING	0 - PENDING
	5 - 7 UNDEFINED
1 - UNKNOWN	1 - UNKNOWN
2 - NONTHREAT/FRIEND	2 - ASSUMED FRIEND
	3 - FRIEND
	4 - NEUTRAL
3 - THREAT	5 - SUSPECT
	6 - HOSTILE

3. Platform is determined from the J3.7C1 Environment/Category and J3.7C4 Platform fields as follows:

Link 11/11B	Link 16
PLATFORM	ENVIRONMENT/CATEGORY
0 - NO STATEMENT	0 - NO STATEMENT/UNKNOWN
	6, 7 - UNDEFINED

MIL-STD-6016B

PLATFORM	ENVIRONMENT/CATEGORY	LAND (GROUND) PLATFORM
5 - LAND	5 - LAND (GROUND)	0-63

4. Time Stale is determined from the J3.7I Hour, Minute, and Second fields by subtracting Hour, Minute, and Second from the estimated time of transmission of the forwarded M.86B message and rounding to the nearest whole minute. If the result is greater than 29 minutes, translate to Time Stale = 30 (30 Minutes or More). If either Hour or Minute is received as No Statement, translate to Time Stale = 31 (Nonreal-Time Fix or Bearing).

5. Report Source is determined from the J3.7I Fix or Bearing Descriptor field as follows:

APPENDIX C

TABLE C.5.2-M.6B-1. M.6B/M.86B Message Data Element Translation from the J3.7 Message (Sheet 5 of 6)

NOTES (Continued)

5. (Continued)

Link 11/11B	Link 16
REPORT SOURCE	FIX OR BEARING DESCRIPTOR
0 - ES (OTHER THAN RDF)	0 - EW FIX
	2 - BEARING, TYPE NOT SPECIFIED
	3 - BEARING, ES
	7 - BEARING, UNKNOWN
1 - RDF	5 - BEARING, RADIO DIRECTION FINDING

Values 1, 4, and 6 in Link 16 will not be forwarded in this message.

6. Bearing Accuracy is determined as follows:

Link 11/11B	Link 16
BEARING ACCURACY	BEARING ACCURACY (NO STATEMENT)
0(NO STATEMENT)	0(NO STATEMENT)
1(< 2 DEGREES)	6(<= 2.0 DEGREES) THROUGH 15(<= 0.001 DEGREES)
2(< 10 DEGREES)	2(<= 10.0 DEGREES) THROUGH 5(<= 3.0 DEGREES)
3(= OR > 10 DEGREES)	1(> 10.0 DEGREES)

7. Link 16 Bearing is in 360/4096 degree increments, and Link 11/11B Bearing is in 360/512 degree increments. Translate Link 16 to the nearest Link 11/11B increment (.5 rounded up), except that a Link 16 Bearing greater than 359 19/64 shall be forwarded as a Link 11/11B Bearing of 359 19/64.

8. Bearing Indicator is determined from the J3.7I Fix or Bearing Descriptor as follows:

Link 11/11B	Link 16
BEARING INDICATOR	FIX OR BEARING DESCRIPTOR
0 - BEARING	2 - BEARING, TYPE NOT SPECIFIED
	3 - BEARING, ES
	5 - BEARING, RADIO DIRECTION FINDING
1 - BEARING UNKNOWN	0 - EW FIX
	7 - BEARING, UNKNOWN

APPENDIX C

TABLE C.5.2-M.6B-1. M.6B/M.86B Message Data Element Translation from the J3.7 Message (Sheet 6 of 6)

NOTES (Continued)

8. (Continued)

Link 16 values 1, 4, and 6 are not forwarded in this message.

9. When the J3.7 Emitter Number Indicator = 1, the Link 16 Emitter Number equates to the Link 11/11B Emitter Number. If the J3.7 Emitter Number Indicator = 0, the Link 16 Emitter Number field is not interpreted and cannot be forwarded.

10. When translating to Frequency/Frequency Range and Frequency Multiplier, set the Evaluation Switch to 0. When translating to Emitter Number, Mode Number, and Confidence, set the Evaluation Switch to 1. In order to forward all data received, two M.86B(EV SW=0 and EV SW=1) messages may have to be sent.

NOTES

1. Not Used
2. When J14.0C4 PRF/PRI Indicator is set to 0 (PRF Being Reported), Pulse Repetition Frequency (PRF) is forwarded as shown below. When PRF/PRI Indicator is set to 1 (PRI Being Reported), it must be converted to PRF. The inverse of Pulse Repetition Interval (PRI) ($1/PRI$) = PRF. This value (derived from PRF or inverse of PRI) is rounded to the nearest 0.1 Pulses Per Second (PPS) if < 13107.15 PPS or the nearest whole PPS if ≥ 13107.15 , and is forwarded as shown below.

Link 11/11B		Link 16
PULSE REPETITION		PULSE REPETITION
FREQUENCY	PRF SCALING	FREQUENCY
0 - NO STATEMENT	0	0 - NO STATEMENT
1-131071	1 - .1 PULSES/SECOND	0.1 - 13107.1
13107 - 131070	0 - 1 PULSE/SECOND	13107.2 - 131070.4
131071	0 - 1 PULSE/SECOND	≥ 131070.5

3. Link 16 Pulse Width is in .05 microsecond increments, and Link 11/11B Pulse Width is in .1 microsecond increments. Translate Link 16 to the nearest Link 11/11B increment (.5 rounded up).

4. When the J14.0C4 Antenna Scan Rate/Period Indicator (ASP IND) is set to 0 (No Statement), the M.86C Antenna Scan Period field shall be set to 0 (No Statement), and the M.86C Switch shall be set to 0. When ASP IND = 1 or 2, the Switch field is determined from the J14.0C4 ASP IND field as follows:

Link 11/11B	Link 16
SWITCH	ANTENNA SCAN RATE/PERIOD INDICATOR
0 - ANTENNA SCAN PERIOD REPORTED	2 - ANTENNA SCAN PERIOD BEING REPORTED
1 - SCAN RATE REPORTED	1 - PRIMARY ANTENNA SCAN RATE BEING REPORTED

APPENDIX C

TABLE C.5.2-M.6D. M.6D/M.86D Message Data Element Translation from Link 16
(Sheet 4 of 7)

NOTES

1. When J14.2I EW Action Value (EWAC) = 12, Track Number, Reference translates to M.6D Response Track Number and M.6D Track Number shall be set to 0000. When J14.2I EWAC = 14, Track Number, Reference is not used and M.6D Track Number shall be set to 0000. For all other EWACs, M.6D Track Number is translated from J14.2I TN, Reference.

2. Control is determined from the J14.2I EWAC as follows:

Link 11	Link 16
CONTROL	ELECTRONIC WARFARE ACTION VALUE
0 - REQUEST PERIODIC REPORT	0 - REQUEST PERIODIC REPORT
1 - REQUEST AUTOMATIC EVALUATION	1 - REQUEST AUTOMATIC EVALUATION
2 - REQUEST MANUAL EVALUATION	2 - REQUEST MANUAL EVALUATION
3 - REQUEST UPDATE THEN WATCH	3 - REQUEST UPDATE AND WATCH
4 - REQUEST DIRECTED SEARCH	4 - REQUEST DIRECTED SEARCH (WITHOUT EITHER J14.2C1 OR J14.2C3 WORD)
5 - REQUEST DIRECTED SECTOR SEARCH	4 - REQUEST DIRECTED SEARCH (WITH J14.2C1 OR J14.2C3 WORD)
7 - CANCEL REQUEST/CEASE REPORT	5 - CANCEL REQUEST
	6 - CEASE REPORT
8 - EMITTER EVALUATION	7 - EMITTER EVALUATION
9 - PARAMETER ASSOCIATION	8 - PARAMETER ASSOCIATION
10 - EMITTER ASSOCIATION	9 - EMITTER ASSOCIATION
11 - DISASSOCIATION	10 - DISASSOCIATION
12 - NO FIND	11 - NO FIND
13 - RESPONSE TO EW REQUEST	12 - RESPONSE TO AN ELECTRONIC WARFARE REQUEST
14 - EVALUATE TRACK	13 - EVALUATE TRACK
15 - EVALUATE SECTOR	14 - EVALUATE SECTOR

3. When J14.2I EWAC = 7-12, the M.6D has no Receipt/Compliance (R/C) field. When J14.2I EWAC = 0-6, 13, or 14, Receipt/Compliance is determined as follows:

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.6D. M.6D/M.86D Message Data Element Translation from Link 16
(Sheet 5 of 7)

NOTES (Continued)

3. (Continued)

Link 11/11B	Link 16
RECEIPT/COMPLIANCE	RECEIPT/COMPLIANCE
0 - ORIGINAL ORDER - RECEIPT/COMPLIANCE REQUIRED	0 - ORIGINAL ORDER
1 - ORIGINAL ORDER - NO RECEIPT/COMPLIANCE REQUIRED	1 - ORIGINAL ORDER
3 - CANTCO	6 - CANTCO (CANNOT COMPLY)
	7-14 - CANTPRO (CANNOT PROCESS)
	16-21 - CANTPRO (CANNOT PROCESS)

4. When J14.2I EWAC = 0-6, 13, or 14, the M.6D has no EWC Indicator field. When J14.2I EWAC = 7-12, the J14.2 EWC Indicator equates to the M.6D EWC Indicator.

5. When J14.2I EWAC = 7-10, the M.6D has no TN, Addressee. The J14.2 (EWAC = 7-10) shall be translated and forwarded to Link 11/11B as M.6D(Control=8-11) if the J14.2 TN, Addressee = 00177 (octal) or an active PU/RU for whom data are being forwarded by this FJU.

6. Referenced Control Value or Canceled Control Value is determined from J14.2E0 Reference EWAC as follows:

Link 11/11B	Link 16
CONTROL	ELECTRONIC WARFARE ACTION VALUE
0 - REQUEST PERIODIC REPORT	0 - REQUEST PERIODIC REPORT
1 - REQUEST AUTOMATIC EVALUATION	1 - REQUEST AUTOMATIC EVALUATION
2 - REQUEST MANUAL EVALUATION	2 - REQUEST MANUAL EVALUATION
3 - REQUEST UPDATE THEN WATCH	3 - REQUEST UPDATE AND WATCH
4 - REQUEST DIRECTED SEARCH	4 - REQUEST DIRECTED SEARCH (WITHOUT EITHER J14.2C1 OR J14.2C3 WORD)
5 - REQUEST DIRECTED SECTOR SEARCH	4 - REQUEST DIRECTED SEARCH (WITH J14.2C1 OR J14.2C3 WORD)
14 - EVALUATE TRACK	13 - EVALUATE TRACK
15 - EVALUATE SECTOR	14 - EVALUATE SECTOR

7. When the J14.2C3 Emitter Number Indicator = 1, the Link 16 Emitter Number equates to the Link 11/11B Emitter Number. If the J14.2C3 Emitter Number

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.6D. M.6D/M.86D Message Data Element Translation from Link 16
(Sheet 6 of 7)

NOTES (Continued)

7. (Continued)

Indicator $\neq$ 1, the Link 16 Emitter Number field is not interpreted and cannot be forwarded.

8. Not Used.

9. Report Duration is determined from J14.2E0 Time Duration as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>REPORT DURATION</u>	<u>TIME DURATION (NO STATEMENT)</u>
0(ONE REPORT REGARDLESS OF TIME)	0(NO STATEMENT)
	1(1 SECOND)
	2(2 SECONDS)
	3(3 SECONDS)
	4(4 SECONDS)
	5(5 SECONDS)
	6(10 SECONDS)
	7(15 SECONDS)
	8(20 SECONDS)
	9(25 SECONDS)
	10(30 SECONDS)
	11(UNDEFINED)
1(1 MINUTE)	12(1 MINUTE)
2(5 MINUTES)	13(5 MINUTES)
3(20 MINUTES)	14(20 MINUTES)
	15(30 MINUTES)

10. Link 16 Sector Width is defined as the number of degrees on each side of the specified bearing, whereas Link 11/11B Bearing Width is defined as the total width of the sector centered on the specified bearing. Therefore, Link 11/11B Bearing Width is double the Link 16 Sector Width, and Bearing Width is determined from J14.2C1 Sector Width as follows:

MIL-STD-6016B

TABLE C.5.2-M.9A-1. M.9A(AC=0) Message Data Element Translation from Link 16
(Sheet 2 of 2)

NOTES

1. M.9A(AC=0) shall be transmitted on Link 11B as a part of the initial sequence for the following messages: M.2/M.82, M.3/M.83, M.4A/M.84, M.5, and M.6A.
2. The Track Number of the M.9A(AC=0) message is derived from the Track Number, Source in the Link 16 Header message for units reported in J2.x messages, or and from the Track Number, Reference in J3.x, J5.4, and J14.0 messages.
3. The PU/RU Address/Source of the M.9A(AC=0) message shall always be the source of the data being forwarded.
4. The Special Processing Indicator of the M.9A(AC=0) shall always be set to 0 when identifying the data source for the C² unit's positional data received in a J2.x message.
5. The Simulation Indicator of the M.9A(AC=0) shall always be set to value 0, when forwarding J14.0 messages. Otherwise, the Simulation Indicator is translated as received in the J2.x, J3.x, or J5.4 message.

APPENDIX C

TABLE C.5.2-M.9A-2. M.9A(AC=1) Message Data Element Translation from the J3.2/J3.3 Message (Sheet 2 of 2)

NOTES

1. The M.9A(AC=1, CI=1) is translated when the J3.2 or J3.3 message with Identity Difference Indicator set to value 1 is forwarded. The M.9A(AC=1, CI=0) is translated when the Identity Difference Indicator has changed from value 1 to value 0 in the J3.2 or J3.3 message being forwarded.

2. The M.9A(AC=1) Environment/Category is determined from the Link 16 Sublabel as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>ENVIRONMENT/CATEGORY</u>	<u>SUBLABEL, J-SERIES</u>
1 - AIR	2 - AIR
2 - SURFACE	3 - SURFACE

3. The PU/RU Address/Source of an M.9A(AC=1) message being forwarded onto Link 11/11B shall always be the source of the data being forwarded.

4. The M.9A(AC=1, CI=0) Identity, Primary Identity Amplification, and Identity Amplification fields shall be translated from the J3.2 or J.3.3 Exercise Indicator, Identity, Platform, and Platform Activity fields in accordance with General Notes 20 and 21. The same fields in the M.9A(AC=1, CI=1) shall be transmitted from the FJU's database in accordance with the Data Retention Rules for M.9A and J7.0 translation trees.

APPENDIX C

TABLE C.5.2-M.9A-7. M.9A(AC=5 OR 7) Message Data Element Translation from the J2.x/J3.x Message (Sheet 2 of 4)

NOTES

1. The proper setting of the M.9A Action and Status Indicator fields is determined by comparing the Force Tell and Emergency status previously reported for the track on Link 11/11B with the status of the track currently reported in the PPLI or Surveillance message being forwarded. When the FT, EMG, or both being reported in the PPLI or Surveillance messages do not change, the appropriate M.9A(AC=5) Track Alert Report shall continue to be transmitted immediately preceding each Track Position and Track Position Amplify message pair. The proper setting for the forwarded M.9A Action and Status Indicator fields are as follows:

Previous J2.x or J3.x

Force Tell and	FT=0	FT=0	FT=0	FT=0	FT=1	FT=1	FT=1	FT=1
Emergency Setting	EMG=0	EMG=0	EMG=0	EMG=0	EMG=0	EMG=0	EMG=0	EMG=0

APPENDIX C

TABLE C.5.2-M.9A-7. M.9A(AC=5 OR 7) Message Data Element Translation from the J2.x/J3.x Message (Sheet 3 of 4)

NOTES (Continued)

1. (Continued)

¹ Only the Emergency status will be reported on the interface when both Emergency and Force Tell status exist, but the Force Tell status must be maintained in the FJU database.

² The M.9A(AC=7, STI=1) is required for transmission on the interface only if the Force Tell alert had previously been reported.

³ Force Tell Alert transmitted if it has not been previously reported.

2. The Environment/Category field will be set only when forwarding the M.9A(AC=5) message as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>Environment/Category</u>	<u>Message Data Element</u>
0 - No Statement	J2.x/Sublabel = 5, or 6. J3.x/Sublabel = 1, or 5.
1 - Air	J2.0/Originator Environment/Category = 3 J2.x/Sublabel = 2 J3.x/Sublabel = 2
2 - Surface	J2.0/Originator Environment/Category = 0 J2.x/Sublabel = 3 J3.x/Sublabel = 3
3 - Subsurface	J2.0/Originator Environment/Category = 1 J2.x/Sublabel = 4 J3.x/Sublabel = 4
4 - Special Point	J2.0/Originator Environment/Category = 2 J3.x/Sublabel = 0
5 - EW Bearings and Fixes	J3.7/Sublabel = 7

APPENDIX C

TABLE C.5.2-M.9A-7. M.9A(AC=5 OR 7) Message Data Element Translation from
the J2.x/J3.x Message (Sheet 4 of 4)

NOTES (Continued)

3. The Track Number Of the M.9A(AC=5 or7) message is derived from the Track Number, Source in the Link 16 Header message for units reported in J2.x messages, or from Track Number Reference in J3.x messages.

4. The PU/RU Address/Source of the M.9A(AC=5 or 7) message shall always be the source of the data being forwarded.

APPENDIX C

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.9A-13. M.9A(AC=9) Message Data Element Translation from the J7.5 Message (Sheet 2 of 3)

NOTES

1. The M.9A(AC=9) message shall be forwarded from the J7.5 (ACT = 0, 1, or 2) message.
2. The multiple modes possible in a single J7.5 message may result in multiple M.9A(AC=9) messages being forwarded.
3. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with least significant digit greater than 3 not being used. The Mode I/II/III Code field of the M.9A(AC=9) IFF Codes are in the order A, B, C, D (A, B only for Mode I), with each triad in the order 4, 2, 1 and the most significant bit A4 in bit position 23. The Mode I field of the J7.5I IFF codes are in the order A4, A2, A1, B2, B1 with the most significant bit A4 in bit position 45.
4. IFF/SIF Action Code (ISAC) translation from Action, IFF/SIF Management:

Link 11/11BIFF/SIF ACTION CODE

- 0 - CLEAR REQUEST
- 1 - DIFFERENCE REPORT

Link 16ACTION, IFF/SIF MANAGEMENT

- 0 - CLEAR IFF/SIF
- 1 - IFF/SIF DIFFERENCE REPORT
- 2 - IFF/SIF UPDATE REQUEST

5. The M.9A(AC=9, Mode Indicator (MI) = 2, 3, 4, or 6) message may be used for ISAC = 0 or 1. The MI = 0 is only applicable in conjunction with the ISAC = 0. The MI = 7 is only applicable in conjunction with the ISAC = 1. If the J7.5 Mode IV Indicator Applicability = 1 and the Action, IFF/SIF Management = 0, a separate M.9A(AC=9) shall be transmitted with ISAC = 0 and MI = 3. In the latter case, the remaining applicable modes will be forwarded in the manner resulting in the fewest M.9A(AC=9) messages.

TABLE C.5.2-M.9F-4. M.9F(1) Message Data Element Translation from the J3.0 Message (Sheet 2 of 2)

NOTES

1. If J3.0C2 Course or Speed and Related Track Number are other than No Statement, two M.9F(AC=1) messages shall be forwarded; the first with Switch = 0 and the second with Switch = 1. Otherwise, Switch shall be set to zero to report velocity or to one to report Related Track Number.
2. The Scale Indicator (SI) in the M.9F(AC=1) is determined as follows:
 - o SI = 0, track velocities are reported in 225/256 data miles/hour increments up to 111 159/256 data miles/hour.
 - o SI = 1, track velocities are reported in 28 1/8 data miles/hour increments up to 3571 7/8 data miles/hour.

The FJU may forward all velocities with Scale Indicator set to 1.

TABLE C.5.2-M.9F-6. M.9F(1) Message Data Element Translation from the J14.0
Message (Sheet 2 of 2)

NOTES

1. The M.9F(AC=1) Switch value shall always be set to value 0. The M.9F(AC=1, SW=1) message (containing Related Track Number) shall not be derived from the J14.0 message.
2. The Scale Indicator (SI) in the M.9F(AC=1) is determined as follows:
 - o SI = 0, track velocities are reported in 225/256 data miles/hour increments up to 111 159/256 data miles/hour.
 - o SI = 1, track velocities are reported in 28 1/8 data miles/hour increments up to 3571 7/8 data miles/hour.

The FJU may forward all velocities with Scale Indicator set to 1.

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.10A-1. M.10A Message Data Element Translation from the J9.0 Message (Sheet 2 of 3)

NOTES

1. The M.10A message may be derived from the J9.0 message or J10.3 message.
2. The M.10A Order value is derived from the J9.0 Command field as follows:

Link 11/11B	Link 16
ORDER	COMMAND
2	20
3	21
4	22

3. The Receipt/Compliance value in the J9.0 message will be reported on Link 11/11B in the Receipt/Compliance field of the M.10A message as follows:

Link 11/11B	Link 16
RECEIPT/COMPLIANCE	RECEIPT/COMPLIANCE
0	0
3	3 or 4
6	6
7	7-22

The M.10A message CANTPRO AMP is set to 0 with the exception of those cases where the Receipt/Compliance value is 16 through 22. In the latter case, set the M.10A message Receipt/Compliance to 7 and the CANTPRO AMP as follows:

Link 11/11B	Link 16
CANTPRO AMP	RECEIPT/COMPLIANCE
1	16
2	17
3	18
4	19
5	20
6	21
7	22

4. When forwarding to Link 11, the Track Number Two (TN-2) field shall be set to the Track Number, Objective as translated. When forwarding to Link 11B, TN-2 shall be set to the source of the J9.0 or the J9.0 R/C message.

APPENDIX C

TABLE C.5.2-M.10A-1. M.10A Message Data Element Translation from the J9.0
Message (Sheet 3 of 3)

NOTES (Continued)

5. If the received J9.0 Command is value 20 or 21, and Friendly Weapon TN is non-zero, M.10A Track Number One (TN-1) is determined from the J9.0 Friendly Weapon TN. If the received J9.0 Command is value 21 and Friendly Weapon TN = 00000, TN-1 is determined from J9.0 Addressee TN. If the received J9.0 Command is value 22, TN-1 shall be set to 0000.

MIL-STD-6016B

APPENDIX C

APPENDIX C

TABLE C.5.2-M.10A-2. M.10A Message Data Element Translation from the J10.3 Message (Sheet 2 of 3)

NOTES

1. The M.10A message may be derived from the J9.0 message or the J10.3 message.

2. The M.10A message Order value is derived from the J10.3 Request for Assume Control field as follows:

Link 11/11B	Link 16
ORDER	REQUEST FOR ASSUME CONTROL
0	0
1	1
6	2

3. The Receipt/Compliance value in the J10.3 message will be reported on Link 11/11B in the Receipt/Compliance field of the M.10A message as follows:

Link 11/11B	Link 16
RECEIPT/COMPLIANCE	RECEIPT/COMPLIANCE
0	0
3	3
6	6
7	7-22

The M.10A message CANTPRO AMP is set to 0 with the exception of those cases where the J10.3 Receipt/Compliance value is 16 through 22. In the latter case set the M.10A message Receipt/Compliance (R/C) to 7 and the CANTPRO AMP as follows:

Link 11/11B	Link 16
CANTPRO AMP	RECEIPT/COMPLIANCE
1	16
2	17
3	18
4	19
5	20
6	21
7	22

4. Normally, if the J10.3 Request for Assume Control = 2, the Track Number, Two (TN-2) field will be set to the Header word Source TN as translated, or

APPENDIX C

TABLE C.5.2-M.10A-2. M.10A Message Data Element Translation from the J10.3 Message (Sheet 3 of 3)

NOTES (Continued)

4. (Continued)

if the J10.3 Request for Assume Control = 0 or 1, TN-2 will be set to the Track Number, Objective as translated. When forwarding to Link 11B, there are two exceptions:

a. TN-2 is set to the address of the unit originating a reply of R/C = 3, 6 or greater than 6.

b. TN-2 is set to the address of the originally addressed unit in the M.10A(R/C=0) message when the forwarding unit originates a CANTPRO.

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.11B. M.11B Message Data Element Translation from Link 16
(Sheet 3 of 5)

NOTES

1. If fuel data are received the Fuel/Time Switch (FT SW) is set to 0. If time data are received, the FT SW is set to 1. If both fuel and time data are received, two M.11B messages are required to forward the data. In the latter case, all fields with the exception of FT SW and Fuel/Time will be set to identical values for both transmissions. If neither Fuel nor Time data are received, the M.11B message is forwarded with FT SW set to 0.

2. The J13.2 Gun Capable will be reported in the M.11B Ordnance D field as follows:

Link 11/11B	Link 16
ORDNANCE D	GUN CAPABLE
0	0
2	1

3. The M.11B Weapon Type provides the capability to show the simple presence or absence of a particular group of air-to-air weapons. The J13.2 indicates a specific type of weapon in a Type of Stores field and the quantity of that weapon being carried in the related Number of Stores field. As many as eight separate weapons may be reported. There are no restrictions as to which weapon will be shown in which of the eight available fields. It would be possible that Type of Stores, 3 would show a weapon while Type of Stores 1, 2, and 4 were No Statement. It is also possible that a Type of Stores will be reported in the J13.2 message with the related Number of Stores field set to 0. In this case, the related Weapon Type will be forwarded as 0. Bit 32 of the M.11B will always be forwarded as zero. Bit 34 of the M.11B will be set to 1 if the J13.2C2 Gun Capable bit is one. The remaining conditions for setting the individual Weapon Type bits to value one are:

Link 11/11B	Link 16	
WEAPON TYPE	TYPE OF STORES, 1-8	NUMBER OF STORES, 1-8
BIT 33 = 1	1	1 - 63
	11	1 - 63

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.11B. M.11B Message Data Element Translation from Link 16
(Sheet 4 of 5)

NOTES (Continued)

3. (Continued)

<u>Link 11/11B</u>	<u>Link 16</u>	
<u>WEAPON TYPE</u>	<u>TYPE OF STORES, 1-8</u>	<u>NUMBER OF STORES, 1-8</u>
BIT 34 = 1	2	1 - 63
BIT 35 = 1	3	1 - 63

4. If the J13.2 Fuel Function is received as value 1, fuel data are not forwarded in the M.11B message. Fuel is reported in 400-pound increments in the M.11B and 100-pound increments in the J13.2. Fuel values 0, 1, 2, 3, and 4095 of the J13.2 will be forwarded as value 0 in the M.11B. Fuel values 4 through 507 of the J13.2 will be translated to the direct equivalent or the next lower M.11B Fuel/Time value. Example; J13.2 values 4, 5, 6, and 7 are translated to M.11B value 1 (400 pounds). J13.2 Fuel values 508 or greater will all be translated to M.11B Fuel/Time value 127.

5. If the J13.2 Time Report Function (TRF) is received as other than value 4, time data are not forwarded in the M.11B message. Zero hours and zero minutes through two hours and six minutes are converted to minutes and forwarded as received. All values for two hours and seven minutes or greater are forwarded as value 127.

6. The M.11B Aircraft Type field is determined from the J13.2C1 Air Specific Type field as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>AIRCRAFT TYPE</u>	<u>AIR SPECIFIC TYPE</u>
0 - NO STATEMENT	0 - NO STATEMENT
	ALL VALUES NOT LISTED BELOW

TABLE C.5.2-M.11C. M.11C Message Data Element Translation from Link 16
(Sheet 3 of 6)

NOTES

1. Time Remaining value 2 shall be forwarded if the Time Report Function (TRF) is 3. Time Remaining value 0 shall be forwarded if the TRF is 0, 1, or 4, or if the TRF is 5 and Minute and Hour are No Statement. Where TRF is 5, the present time of day will be subtracted from the reported Depart Station Time; if the time is positive, it gives time remaining until the aircraft is due to depart station; if the result is negative time, Time Remaining value 1 - Returning to Base shall be forwarded. Time Remaining on Station derived from TRF 5 shall be translated as follows:

Link 11	Link 16	
TIME REMAINING	MINUTE	HOUR
0 - NO STATEMENT	63	31
3 - 0 THROUGH 15 MINUTES	0 - 15	0
4 - 16 THROUGH 30 MINUTES	16 - 30	0

	0 - 59	9
	0	10
15 - LONGER THAN 10 HOURS	1 - 59	10
	0-59	11 - 23

2. As many as three M.11C messages, with different B-Frames and B-Frame Switch (BSW) values, may be required to forward a single J13.2 message. If more than one M.11C message is forwarded from one J13.2 message, the Time Remaining field will be set to an identical value in each M.11C transmitted.

If the J13.2C3 bits 26-43 are other than No Statement, set the BSW to 0. If the J13.2C3 Conventional Depth Bomb Inventory, Special Depth Bomb Inventory, Conventional Torpedo Inventory, Special Torpedo Inventory, Conventional Missile Inventory, Special Missile Inventory, Rocket Inventory, Active Sonobuoy Inventory, or Passive Sonobuoy Inventory field(s) is (are) other than No Statement, or if Air Specific Type and Aircraft model are translatable to other than No Statement in Aircraft Type, set the BSW to 1. If the J13.2I Fuel or the J13.2C3 Radar Watch Altitude are translatable to Fuel or Altitude for Watch, then set the BSW to 2.

3. The Sensor Status, bit positions 26 through 43 of the M.11C, shall be set identically to those received in bit positions 26 through 43 of the J13.2C3. When forwarding Sensor Status, bits 44 through 47 are transmitted as zero.

4. The J13.2 Air Specific Type and Aircraft Model will be translated to the M.11C Aircraft Type as follows:

MIL-STD-6016B

5. Altitude for Watch of the M.11C message reports the best altitude for radar watch in 500-foot increments. The Radar Watch Altitude reports the same information in 100-foot increments. The J13.2 Radar Watch Altitude will be translated to the nearest 500-foot increment in the M.11C; e.g., 800 through 1,200 will be translated to 1,000 feet. J13.2 Radar Watch altitudes above 31,700 feet will be translated to 0 (No Statement) in the M.11C message.

6. If the J13.2 Fuel Function is received as value 1, fuel data are not forwarded in the M.11C message. Fuel is reported in 400-pound increments in

APPENDIX C

TABLE C.5.2-M.11C. M.11C Message Data Element Translation from Link 16
(Sheet 6 of 6)

NOTES (Continued)

6. (Continued)

the M.11C message and 100-pound increments in the J13.2 message. Fuel values 0, 1, 2, 3, and 4095 of the J13.2 message will be forwarded as zero in the M.11C message. Fuel values 4 through 507 of the J13.2 message will be translated to the directly equivalent or next lower M.11C Fuel value. For example, 400, 500, 600, and 700 pounds of fuel are all translated to M.11C value 1 (400 pounds). J13.2 Fuel values 508 or greater will all be translated to M.11C value 127.

APPENDIX C

TABLE C.5.2-M.11D-1. M.11D Message Data Element Translation from the J2.X Message (Sheet 2 of 2)

NOTES

1. The M.11D(TR=0) message is translated from the J2.x messages as specified below:

- o J2.0, J2.2, J2.3, J2.4 (Modes I/II/III).
- o The M.11D(TR=1) message is translated from the J7.5 message.

2. Two M.11D messages are necessary to report all possible IFF/SIF data associated with a specific track. Switch (SW) = 0 indicates Modes I and II; SW = 1 indicates Modes II and III.

3. Valid Mode I codes for data link exchange shall range from 01 through 73 (octal) with 31 possible values, those values with the least significant digit greater than 3 not being used. The Mode I field of the M.11D IFF Codes are in the order A4, A2, A1, B4, B2, B1 with the most significant bit A4 in bit position 47. B4 is never set since the second digit never exceeds 3. The Mode I Code field of the J2.0C1, J2.2C1, J2.3C1, and J2.4C1 IFF Codes are in the order A4, A2, A1, B2, B1 with the most significant bit A4 in bit position 12.

7. The Switch field in the M.811M message is determined by the presence of nonzero data in either the Local Discrete Identifier or Track Number, Controlling Agency of TN Reference fields. If both of these fields contain nonzero data, then two M.811M messages must be sent. If only the Local Discrete Identifier field is present, then the Switch field shall be set to 1. If only the Track Number, Controlling Agency of TN Reference is present, then the Switch shall be set to 0.

APPENDIX C

TABLE C.5.2-M.14-3. M.14 Message Data Element Translation from the J13.3 Message (Sheet 5 of 7)

NOTES

1. The M.14 message may be derived from the J10.2, J13.2, J13.3, J13.4, or J13.5 messages.
2. The M.14 messages forwarding J13 series status information will have the Weapon/Engagement Status (W/ES) set to value 1 if either an Operational Missile Inventory or Number of Fire Control Systems Available is 0 in the J13.3 message. In all other cases, the W/ES will be set to 0.
3. The M.14 Weapon Type and Weapon Range fields provide the capability to show the simple presence or absence of a particular group of surface-to-air or surface-to-surface missiles. As many as twelve separate weapons may be reported in the J13.3. There are no restrictions as to which weapon will be shown in which of the twelve available fields. It would be possible that Missile Type, 2 would show a weapon while all other Missile Types were No Statement. The J13.3 Missile Type, 1 through 12 will be forwarded in the M.14 Weapon Type and Weapon Range fields as follows:

<u>Link 11/11B</u>		<u>Link 16</u>
<u>Weapon Type</u>	<u>Weapon Range</u>	<u>Missile Type, 1 - 12</u>
0	0	0, 7, 28-63
1	1	1
	2	2, 10, 11
	3	3, 8, 9, 12-14, 18-23, 27
2	1	4
	2	5, 26
	3	6, 15-17, 24, 25

In addition, if Missile Type = 8, 9, 12-27, then also transmit another M.14 with:

11	1	9, 12, 18-21
	2	13, 22

APPENDIX C

12	1	15, 26
	2	16, 24
	3	17, 25

4. As many as twelve separate Number of Fire Control Systems Available corresponding to Missile Type, 1-12 may be reported in the J13.3. There are no restrictions as to which Number of Fire Control Systems Available field will be shown in which of the twelve available fields. It would be possible that Number of Fire Control Systems Available, 2 corresponding with Missile Type, 2 would show a valid Number of Fire Control Systems Available while all other Number of Fire Control Systems Available were No Statement. The M.14 Number of Fire Control Systems Available field is determined as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>Number of Fire Control Systems Available</u>	<u>Number of Fire Control Systems Available, 1 - 12</u>
0	0
	15
1	1
2	2
3	3-14

5. As many as twelve separate inventories may be reported in J13.3. There are no restrictions as to which inventory will be shown in which of the twelve available fields. It would be possible that Operational Missile Inventory, 2 would show an inventory while all other Operational Missile Inventory were No Statement. The M.14 Hot Inventory field is determined from the J13.3 Operational Missile Inventory, 1-12 fields as follows:

MIL-STD-6016B

APPENDIX C

TABLE C.5.2-M.14-4. M.14 Message Data Element Translation from the J13.4 Message (Sheet 2 of 3)

NOTES

1. The M.14 message may be derived from the J10.2, J13.2, J13.3, J13.4, or J13.5 messages.
2. The M.14 messages forwarding J13 series status information will have the Weapon/Engagement Status (W/ES) set to value 1 if an Operational Missile Inventory is set to value 0 in the J13.4 message. In all other cases, the W/ES will be set to value 0.
3. The M.14 Weapon Type and Weapon Range fields provide the capability to show the simple presence or absence of a particular group of surface-to-air or surface-to-surface missiles. As many as three separate weapons may be reported in the J13.4. There are no restrictions as to which weapon will be shown in which of the three available fields. It would be possible that Missile Type, 2 would show a weapon while Missile Type, 1 and 3 were No Statement. The J13.4 Missile Type, 1, 2, or 3 will be forwarded in the M.14 Weapon Type and Weapon Range fields as follows:

<u>Link 11/11B</u>		<u>Link 16</u>
<u>Weapon Type</u>	<u>Weapon Range</u>	<u>Missile Type, 1, 2 or 3</u>

TABLE C.5.2-M.15. M.15 Message Data Element Translation from the J9.0 Message (Sheet 2 of 2)

NOTES

1. If the J9.0 Command value is 20-22, the M.10A will be forwarded. Otherwise, the J9.0 Command value will be reported in the M.15 Command message as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>COMMAND</u>	<u>COMMAND</u>
0-8	0-8
3	23
14-19	14-19
20	27

2. The R/C value in the J9.0 message will be reported on Link 11/11B in the R/C field of the M.15 message as follows:

<u>Link 11/11B</u>	<u>Link 16</u>
<u>RECEIPT/COMPLIANCE</u>	<u>RECEIPT/COMPLIANCE</u>
0 or 1	0 or 1
3 or 4	3 or 4
6	6
7	7-22

3. The Command value of the J9.0 message will determine which J9.0 Data Element will be translated to TN Weapon System/TN-1/Originator.

<u>J9.0 COMMAND</u>	<u>J9.0 DATA ELEMENT</u>
0-8 OR 23 (FOR LINK 11)	TRACK NUMBER, FRIENDLY WEAPON
0-8 OR 23 (FOR LINK 11B)	HEADER, TN SOURCE
16 OR 17	COMMAND MISSION

For the J9.0 message data elements above, the identical values will be used for the M.15 field.

4. Not Used.

APPENDIX C

C.5.3 GENERAL NOTES FOR MESSAGE DATA ELEMENT TRANSLATION

This section provides the general notes used for message data element translations in section C.5.2.

APPENDIX C

GENERAL NOTE 1 HEADER INFORMATION

Header information is required on all Link 16 messages. The Track Number, Source will be that of the unit whose data are being forwarded within the time slot. Only data from the Track Number, Source shall be transmitted within a time slot. An FJU forwarding for multiple sources shall ensure the above separation of data and individual data sources. The Relayed Transmission Indicator shall be set to 0 by the FJU for forwarded messages. Subsequent relay by any platform of these forwarded messages will follow normal procedure for setting of the Relayed Transmission Indicator. Messages which are originated by the FJU such as a Drop Track for a unit which becomes inactive shall be transmitted with the FJU as Track Number, Source.

GENERAL NOTE 2 DATA SOURCE DETERMINATION

LINK 16. The data source of Link 16 messages is contained in the Link 16 message header.

The Source TN field in the Header word that accompanies each J2.0 message will contain the TN associated with the forwarded unit.

LINK 11. The data source of Link 11 messages that do not include data source (M.81, M.2, M.82, M.3, M.83, M.4A, M.84A, M.4B, M.4C, M.84C, M.4D, M.84D, M.5, M.85, M.6A, M.6B, M.86B, M.6C, M.86C, M.6D, M.9A(AC=3), M.9E, M.9F(AC=0), M.89F(AC=0), M.9F(AC=1), M.10A(Order=0-5), M.11B, M.11C, M.11D, M.811M, and M.15) is determined by the data source of the last received M.1 message.

The data source of Link 11 messages that include data source (M.1, M.9A(AC=1, 2, 4, 5, 6, 7, 9), M.9B, M.9C, M.10A(Order=6), M.11M, and M.14) is determined by the PU/RU source in the message.

LINK 11B. The source of Link 11B messages that do not include data source is as follows:

<u>LINK 11B Messages</u>	<u>Data Source</u>
M.2, M.82, M.3, M.83, M.4A,	PU/RU of the last received and acknowledged

MIL-STD-6016B

APPENDIX C

M.84A, M.5, M.85, M.6A, M.9A(AC=0) message on that track number.
M.9F(AC=0), M.89F(AC=0),
M.9F(AC=1), M.11D

M.9A(AC=3) PU/RU of the M.1 message received on the same channel on which the M.9A(AC=3) message was received.

M.9E, M.11B PU/RU of the last received M.9A(AC=6) message on the channel on which the message was last received.

M.10A See specific message rule.

M.811M PU/RU of the immediately preceding M.11M.

The data source of Link 11B messages that include data source (M.0, M.1, M.9A(AC=1, 2, 4, 5, 6, 7, 9), M.9B, M.9C, M.11M, M.14, M.15) is determined by the PU/RU source in the message.

GENERAL NOTE 3 MESSAGE LENGTH INDICATOR

The Message Length Indicator value indicates the additional 75-bit words that are part of this message. A maximum of seven additional words, either extension or continuation words, may be transmitted in a single time slot.

GENERAL NOTE 4 EMERGENCY/FORCE TELL INDICATORS

Since the M.9A(AC=5) message is not transmitted with every M.1, M.2, or M.3 message, the Emergency and Force Tell indicators are set to 0 or 1 in accordance with the track alert information held in the FJU's database on the track.

GENERAL NOTE 5 SPECIAL PROCESSING INDICATOR

LINK 16. The Special Processing Indicator (SPI) in the Link 11/11B message is set in accordance with the received J3.x, J5.4, J6.0, or J14.0 message

APPENDIX C

being forwarded. The SPI information is forwarded to Link 11 by setting the SPI bit in the M.1 message(s) preceding the forwarded data. On Link 11B, SPI information is forwarded in the M.9A (AC=0) message as part of an initial sequence. The one exception to this rule involves the forwarding of a J6.0 message as an M.11/.811M message sequence. Since the M.11M message contains a SPI field, the setting of the SPI bit in a preceding Link 11, M.1 or Link 11B, M.9A (AC=0) message is not required.

LINK 11. The Special Processing Indicator in the Link 16 surveillance message is set in accordance with the latest received M.1 message. The SPI in the J6.0 message is set in accordance with the received M.11M message.

LINK 11B. The Special Processing Indicator in the Link 16 surveillance message is set in accordance with the latest received and acknowledged M.9A(AC=0) message. The SPI in the J6.0 message is set in accordance with the received M.11M message.

GENERAL NOTE 6 SIMULATION INDICATOR

Units may originate and report simulated tracks on Links 11/11B/16 when such reports do not represent real (live) objects. Simulated tracks may be transmitted concurrently with reports of live tracks. On Link 16 the Simulation Indicator shall be set to 1 to indicate a simulated track and set to "0" to indicate a real track.

On Link 11, an M.9A(AC=0, SI=1) message precedes each report of a simulated track; the absence of an M.9A(AC=0, SI=1) message indicates a real track.

On Link 11B, an M.9A(AC=0, SI=1) message precedes each report of a simulated track once in each of six successive transmit opportunities or until an acknowledgement is received; an M.9A(AC=0, SI=0) message precedes each report of a real track until acknowledged.

If the simulated unit is a nonC² JU being forwarded to Link 11 or 11B, or a C² IU being forwarded to Link 11B, the M.9A (AC=0, SI=1) message shall precede appropriate messages. If the simulated unit is a C² IU being forwarded to Link 11, the M.1 (SIM=1) message will be part of the initial sequence.

MIL-STD-6016B

APPENDIX C

GENERAL NOTE 7 COURSE AND SPEED TO X DOT AND Y DOT

See MIL-STD-6016 paragraph 4.1.4.2.3. A Link 16 Speed greater than the maximum reportable Link 11/11B velocity will be translated to the maximum reportable velocity, maintaining the proper azimuth component of velocity as required to translate the Link 16 Course.

GENERAL NOTE 8 X DOT AND Y DOT TO COURSE AND SPEED

See MIL-STD-6016 paragraph 4.1.4.2.3. A Link 11/11B velocity greater than the maximum reportable Link 16 speed will be translated to the maximum reportable Link 16 Speed, and the appropriate Course.

GENERAL NOTE 9 LATITUDE/LONGITUDE

See MIL-STD-6016 paragraph 4.1.4.2.3.

GENERAL NOTE 10 ALTITUDE, ELEVATION, AND HEIGHT

The forwarded altitude, height or elevation shall be translated to the nearest value increment of the destination link. The FJU has the option of implementing for forwarding the single Scale Indicator (SI=0) on Link 11/11B. This provides the greatest range of height. Translations which result in one half increment will be rounded up to the next higher increment. The following are two examples:

a. A J3.2 altitude of 225 feet (Bit Code 9) will either be forwarded as 0 height (M.2 SI=0, M.82 Height Code=0) or as 218.75 feet (M.2 SI=1, M.82 Height Code=7).

b. A J3.2 altitude of 250 feet (Bit Code 10) will either be forwarded as 500 feet (M.2 SI=0, M.82 Height Code=1) or as 250 feet (M.2 SI=1, M.82 Height Code=8).

When the received value exceeds the largest value possible on the destination link, the received value shall be forwarded as No Statement or Unknown.

APPENDIX C

The altitude, elevation, and height ranges and scalings between Link 16 and Link 11/11B are depicted in GENERAL NOTE 10.1.

MIL-STD-6016B

		UNKNOWN	255	
1	NA	NA	NA	Reports Depth. Forward J3.0 with Altitude, 100 Ft. 1 and Altitude, 100 Ft. 2 fields both set to 1023, No Statement.

APPENDIX C

GENERAL NOTE 11 DEPTH

Depth is reported on Link 16 in 15 meter increments, with a range of 0-1890 meters. Depth is reported on Link 11 in 50 foot increments. Since 3m. = 9.84ft., the conversion is approximated, using a ratio of 3 meters to 10 feet. When the received value exceeds the largest value possible on the destination link, the received value shall be forwarded as the maxim value on the destination link.

GENERAL NOTE 12 PU/RU ADDRESS/TRACK NUMBER, SOURCE

The Link 16 Track Number, Source data element contains 15 bits while the Link 11/11B PU/RU Address field contains only 7 bits. When translating from Link 11/11B to Link 16, the eight most significant bits of the Link 16 Track Number, Source data element must be zero, and the seven bits of the Link 11/11B PU/RU Address will become the seven least significant bits of the Link 16 Track Number, Source. When translating from Link 16 to Link 11/11B, the seven least significant bits of the Link 16 Track Number, Source when less than 00200 (octal) become the Link 11/11B PU/RU Address. See paragraph C.4.7.2 for forwarding of Link 16 C² units having an address of 00200 (octal) or greater.

GENERAL NOTE 13 TRACK NUMBER

To accommodate the forwarding of dissimilar TNs, the Association message in the Link 16 message series provides for the association of Link 11/11B, NATO Link 1, and JTIDS/MIDS TNs.

Two conversion procedures are required for TNs. The procedures are:

If a received TN is less than 7777 (octal), the TN will be forwarded without conversion except for the addition or deletion of leading zeros (seven most significant bit positions) to account for the difference in field size between Link 16 and Link 11/11B.

If an initial report (track, point, etc) with a TN greater than 7777 (octal) is received on Link 16, the FJU will assign an available Link 11/11B

APPENDIX C

TN to the subject entity and substitute the appropriate Link 16 or Link 11/11B TN in all forwarded messages concerning the entity. In addition, the FJU will transmit an association message on Link 16 reporting the relationship between the Link 16 and Link 11/11B TNs.

The following is an example of a Link 16 to Link 11 exchange of a 19-bit TN:

- a. A JU on Link 16 establishes a new track and reports it with TN AZ200.
- b. The FJU receives TN AZ200 and assigns it a Link 11 TN 3333.
- c. The FJU transmits:
 - (1) On Link 11, a track report with TN 3333.
 - (2) On Link 16, a message indicating that TN AZ200 is associated with TN 3333.

GENERAL NOTE 14 NOT USED

GENERAL NOTE 15 VALUE EQUIVALENCE

Valid decimal values and definitions are identical for Link 16 and Link 11/11B; however, the bit fields are different sizes.

GENERAL NOTE 16 NOT USED

GENERAL NOTE 17 AXIS ORIENTATION/BEARING

a. A Link 11/11B Bearing between 0 and 178 19/32 degrees is translated to the nearest whole degree as Link 16 Axis Orientation. When the Link 11/11B Bearing is between 180 and 358 19/32 degrees, subtract 180 degrees, then translate to the nearest whole degree as Link 16 Axis Orientation.

b. A Link 16 Axis Orientation between 0 and 179 degrees is translated to the nearest Link 11/11B bearing between 0 and 178 19/32. When the Link 16

APPENDIX C

Axis Orientation is No Statement and Area Major Axis and Area Minor Axis are other than No Statement, it will be translated to Link 11/11B Bearing = 0.

GENERAL NOTE 18 AREA MINOR AXIS AND AREA MAJOR AXIS

a. If divisible by 4, Link 11/11B Major Axis and Minor Axis between 0 and 244 are translated directly to Link 16 Area Major Axis and Minor Axis. If not divisible by 4, add 2 data miles and translate directly to Link 16 Area Major Axis and Minor Axis. Link 11/11B Major Axis and Minor Axis greater than 244 are translated to Link 16 Area Major Axis or Minor Axis = 244.

b. Link 16 Area Major Axis and Minor Axis are translated directly to Link 11/11B Major Axis and Minor Axis. If Link 16 Area Major Axis or Minor Axis is No Statement, the message is not translated to a Link 11 Area of Probability.

MIL-STD-6016B

APPENDIX C

This page is intentionally left blank.

MIL-STD-6016B

APPENDIX C

GENERAL NOTE 19 FREQUENCY CONVERSION

Conversion between Link 11/11B and Link 16 Frequencies shall be accomplished as follows:

a. Link 11/11B to Link 16:

(1) When translating M.6A Frequency, or when translating M.6B/M.86B or M.6D, Link 11/11B Frequency Multiplier (FM) = 0 (Frequency Range), set the Link 16 Frequency/Frequency Range Indicator (F/R IND) to 1, and determine Link 16 FM, 1 and 2, and Frequency, 1 and 2, from Link 11/11B Frequency as follows:

Link 16				Link 11/11B	
FM, 1	FREQ, 1	FM, 2	FREQ, 2	FREQ VALUE	FREQUENCY RANGE
0	0	0	0	0	NO STATEMENT
				14-16383	UNDEFINED
0	1	6	249	1	0-249 MHZ
6	250	6	499	2	250-499 MHZ
6	500	6	999	3	500-999 MHZ
6	1000	6	1999	4	1000-1999 MHZ
6	2000	6	2999	5	2000-2999 MHZ
6	3000	6	3999	6	3000-3999 MHZ
6	4000	6	5999	7	4000-5999 MHZ
6	6000	6	7999	8	6000-7999 MHZ
6	8000	6	9999	9	8000-9999 MHZ
6	10000	6	19999	10	10,000-19,999 MHZ
6	20000	6	39999	11	20,000-39,999 MHZ
6	40000	6	59999	12	40,000-59,999 MHZ
6	60000	6	100000	13	60,000-100,000 MHZ

(2) When translating M.6B/M.86B or M.6D, Link 11/11B FM $\neq$ 0, set Link 16 F/R IND to 0, set FM, 1 = Link 11/11B FM; set Frequency, 1 = Link 11/11B Frequency, and set FM, 2 and Frequency, 2 to No Statement (FM, 2 = 15, Frequency, 2 = 0).

b. Link 16 to Link 11/11B:

(1) To translate to the M.6A, when the Link 16 F/R IND = 0 (Frequency), which indicates that a single frequency is to be translated to a frequency range, translate the result of Link 16 (FM, 1 times Frequency, 1)

APPENDIX C

to the appropriate M.6A Frequency value that is defined by the range that includes the result of FM, 1 times Frequency, 1 (for example, a Link 16 Frequency of 8500 MHz would translate to an M.6A Frequency of 9, since 8500 falls in the range of 8000-9999 MHz). If Link 16 (FM, 1 times Frequency, 1) is greater than 100,000 MHz then Frequency value will be set to 0 (No Statement).

(2) To translate the M.6B/M.86B or M.6D, when the Link 16 F/R IND = 0 (Frequency), which indicates that a single frequency is to be translated, as opposed to a frequency range, if the result of Link 16 (FM, 1 times Frequency, 1) is less than or equal to $16,383 \times 10^7$ Hz directly translate the numerical value of (FM, 1 times Frequency, 1) to the appropriate values of Link 11/11B FM Frequency that yields the same result. If the result of Link 16 (FM, 1 times Frequency, 1) is greater than $16,383 \times 10^7$ Hz, then the M.86B or M.6D FM field shall be set to value 0 and the F/FR field shall be set to value 0 (No Statement).

(3) If the Link 16 F/R IND = 1 (Frequency Range), it indicates that a frequency range shall be translated to a frequency range in either the M.6A, M.6B/M.86B or M.6D. If translating to the M.6B/M.86B or M.6D, set M.86B or M.6D FM to 0. The FJU shall determine if the Link 16 lower and upper limits, as expressed by (FM, 1 times Frequency, 1) and (FM, 2 times Frequency, 2), respectively, are both contained within a single defined Link 11/11B Frequency Range, as listed below (the Link 11/11B Frequency Ranges are identical in the M.6A, M.86B or M.6D). If so, set Link 11/11B Frequency value accordingly. If not, set the Link 11/11B Frequency field to the value whose defined upper limit is closest to the result of (FM, 2 times Frequency, 2), as follows:

MIL-STD-6016B

APPENDIX C

Link 11/11B		Link 16
FREQUENCY VALUE	RANGE	FM, 2 X FREQ, 2
0	NO STATEMENT	0
1	0-249 MHZ	≤ 374 MHZ
2	250-499 MHZ	375-749 MHZ
3	500-999 MHZ	750-1499 MHZ
4	1000-1999 MHZ	1500-2499 MHZ
5	2000-2999 MHZ	2500-3499 MHZ
6	3000-3999 MHZ	3500-4999 MHZ

FAKER	ALL (NS)	ALL OTHERS (NS)	EXERCISE INDICATOR=1	FRIEND	SPECIAL MISSION	FAKER

APPENDIX C

GENERAL NOTE 20.3. AIR IDENTITY TRANSLATION (Sheet 1 of 15)

If a track is being reported on Link 11/11B and the table offers multiple Link 16 selections for the translation and vice versa, forward the first (top) selection. If the Link 16 choice is "ALL (X)," where "X" represents No Statement (NS) or another specific value, forward "X" if no other value for Platform and/or Platform Activity is held in the FJU database. If a value other than No Statement for Platform and/or Platform Activity has been previously reported on Link 16 and that value is translated to Link 11/11B, then the Link 16 values will be retained for subsequent forwarding to Link 16. If the Link 11/11B changes Identity (ID), Primary Identity Amplification (PRI AMP), and/or Identity Amplification (ID AMP), the Link 16 values previously held will be discarded and no longer forwarded. For example, if an R² JU reports Assumed Friend, Fighter/Bomber, and Interdiction for Identity, Platform, and Platform Activity, respectively, then the translation to Link 11/11B would be Unknown, Assumed Friend, Bomber for ID, PRI AMP, and ID AMP, respectively. The FJU, though, retains Assumed Friend, Fighter/Bomber, and Interdiction in the database. When a PU/RU assumes R² for this track and reports Unknown, Assumed Friend, and Bomber, the FJU will forward the retained values of Assumed Friend, Fighter/Bomber, and Interdiction. If the PU/RU changes the values to Unknown, Assumed Friend and Fighter, the FJU will forward Assumed Friend, Fighter, and No Statement onto Link 16. (See sheet 6 of GENERAL NOTE 20.3.)

Within a specific Identity whenever "ALL" appears in the Link 16 Platform or Platform Activity columns, it means "ALL PLATFORMS or PLATFORM ACTIVITIES" including undefined values unless a specific value appears elsewhere in the Platform or Platform Activity columns.

APPENDIX C

GENERAL NOTE 21.3. SURFACE (MARITIME) IDENTITY TRANSLATION (Sheet 1 of 9)

If a track is being reported on Link 11/11B and the table offers multiple Link 16 selections for the translation and vice versa, forward the first (top) selection. If the Link 16 choice is "ALL (X)," where "X" represents No Statement (NS) or another specific value forward "X" provided no other value for Platform and/or Platform Activity is held in the FJU database. If a value other than No Statement for Platform and/or Platform Activity has been previously reported on Link 16 and that value is translated to Link 11/11B, then the Link 16 values will be retained for subsequent forwarding to Link 16. If the Link 11/11B changes Identity (ID), Primary Identity Amplification (PRI AMP), and/or Identity Amplification (ID AMP), the Link 16 values previously held will be discarded and no longer forwarded. For example, if an R² JU reports Assumed Friend, Ocean Research, and Surveying for Identity, Platform, and Platform Activity, respectively, then the translation to Link 11/11B would be Unknown, Assumed Friend, and Non-MIL for ID, PRI AMP, and ID AMP, respectively. The FJU, though, retains Assumed Friend, Ocean Research, and Surveying in the database. When a PU/RU assumes R² for this track and reports Unknown, Assumed Friend, and Non-MIL, the FJU will forward the retained values of Assumed Friend, Ocean Research, and Surveying. If the PU/RU changes the values to Unknown, Assumed Friend, and SIGINT, the FJU will forward Assumed Friend, Intelligence Collector, and Intelligence Collecting onto Link 16. (See sheet 4 of GENERAL NOTE 21.3.)

Within a specific identity whenever "ALL" appears in the Link 16 Platform or Platform Activity columns, it means "ALL PLATFORMS or PLATFORM ACTIVITIES" including undefined values, unless a specific value appears elsewhere in the PLATFORM or PLATFORM ACTIVITY columns.

APPENDIX C

MIL-STD-6016B

MIL-STD-6016B

APPENDIX D

SYSTEM IMPLEMENTATION

D.1 SCOPE

Appendix D and the classified supplements of Appendix D describe the Link 16 implementation of each system participating in the Link 16 joint interface. It shows the implementation from the function level down to the data item level. A description of the system function listing and data item implementation report is provided in paragraph D.4.1. Systems having implementation data for Link 16 in the TADIL Development System (TDS) are identified in Table D-1.

The Link 16 system implementation codes at each implementation level are defined in paragraph D.5.1. The hierarchical dependency of the implementation codes at each level is shown in paragraph D.5.2. The TDS contains the implementation data (for the Appendix D Classified Supplements) in automated format as reported by the services and agencies. Each service or agency has a separate part of the classified supplement showing the implementation of each of their Link 16 systems.

D.2 APPLICABLE DOCUMENTS

The documents listed in section 2 of this standard are applicable to this appendix.

D.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

D.4 GENERAL REQUIREMENTS

D.4.1 DESCRIPTION

Link 16 System Implementation data contained in the MIL-STD-6016 Appendix D Classified Supplement are displayed using the System Function Listing and the Data Item Implementation Report. These two formats are shown in Figures D-1 and D-2, respectively. Both reports are available on the DISA/IN5 TDS

APPENDIX D

through the Report Generation function. The System Function Listing displays the declared functions of each system (Link 16 technical functions and additional functions upon which the Minimum Implementation (MIN IMP) requirements are based). The Data Item Implementation Report displays system implementation data for all messages or a user specified set of messages or words. In addition, the user may specify a report at the message, word, DFI/DUI, or data item level.

In addition to the System Function Listing and Data Item Implementation Report, two additional reports are available from the TDS, the System Implementation Difference Report and the Minimum Implementation Comparison Report. The System Implementation Difference Report compares the implementations of up to four systems. It determines system interoperability by comparing the transmit code implementation of a target system to the receive code implementation of up to three other systems; it also compares the receive code implementation of the target system to the transmit code implementations of the other systems. A difference indicator prints whenever the implementation codes of the target system are not interoperable with the other systems. The user may select a report at the message, word, DFI/DUI, or data item level, for all or a specified set of messages and words.

The Minimum Implementation Comparison Report allows the comparison of the implementation codes of a selected system to the required implementation codes of the MIN IMP database (based on the MIL-STD-6016, Appendix A). A difference indicator prints whenever the transmit and/or receive implementation codes of the selected system do not meet MIN IMP requirements. This report is available for the message, word, or DFI/DUI levels, for all or a user specified set of messages.

D.4.1.1 SYSTEM FUNCTION LISTING

The format of the functions as implemented by each system is shown in Figure D-1. The System Function Listing appears before the Data Item Implementation Report for the same systems.

The System Function Listing displays the implementation of specific functions by systems as reported by the cognizant service or agency. The list of

APPENDIX D

functions is derived from the MIL-STD-6016 Appendix A - Minimum Implementation, and consists of functions which affect minimum implementation requirements for systems. These functions include JTIDS/MIDS technical functions, functions addressed by the numerical notations within the Appendix A tables, and other functions in Appendix A which affect system minimum implementation requirements. On the TDS, the primary purpose of these functions is to allow the generation of the Minimum Implementation Difference Report (described in Paragraph D.4-1).

DFI/DUI - 111/006

LEGEND: (X) = NOTE NUMBERS

APPENDIX D

The note numbers following are keyed to the corresponding BOLD numbers in Figure D-2.

<u>Note Number</u>	<u>Notes</u>
(1)	The name of the system for which the functions or capabilities may be implemented. Up to four systems may be listed on a page. The system name corresponds to that on the System Function Listing.
(2)	The message number and name are displayed with the appropriate message implementation codes appearing in the column of the system to which the codes apply. The transmit code appears first followed by a virgule followed by the receive code followed by a virgule followed by the message forwarding code. If a note applies to any of the three codes, it will appear on the line under the applicable code. The number of the note will correspond to a listing of notes located in the beginning of the report.
(3)	If implementation of the word depends on an action value, the word will appear after the message line. Following this word line will be the action DFI/DUI with its DI values on which the word implementation depends. The DFI/DUI line contains the implementation codes for the action DFI/DUI. The transmit code appears first followed by a virgule followed by the receive implementation code. If the DFI/DUI and/or DI implementation is modified by a note, the note number will appear on the line following the one it modifies, under the applicable code. Note numbers range from 1 to a maximum of 999 for each service/agency.
(4)	This is an action value line. If implementation of the word and DFI/DUIs and DIs within the word depend on a DI value of one of the DFI/DUIs within one of the words of the message, the format of the line is the phrase "DUI ABBREVIATION = " followed by the DI value followed by the DFI/DUI upon which the implementation depends.
(5)	This is the word implementation data line. If an action value line is not used, then the word implementation data line follows a message implementation data line. If an action value line is used, this line begins a new page (page N2, Figure D-2). This line contains the implementation codes for the word for each system listed on the page. The transmit implementation code appears first followed by a virgule followed by the receive implementation code. If the implementation is modified by a note, the note number will appear on the next line under the applicable code.
(6)	DFI/DUI implementation data line of the first DFI/DUI appearing in the word (see Note 1) with the DFI/DUI number, DUI name, and the implementation codes for the DFI/DUI for the indicated system. If the implementation is modified by a note, the note bold number will appear in the next line under the applicable code.

APPENDIX D

<u>Note Number</u>	<u>Notes</u>
(7)	The DI implementation line displays the DI value, the DI name, and the implementation codes for the DI for the indicated system. If the implementation is modified by a note, the note number will appear in the next line under the applicable code.
(8)	The DFI/DUI implementation data line appears after the last DI implementation data line of the preceding DFI/DUI in the word.
(9)	Message number, word number, and DFI/DUI number of the first DFI/DUI appearing at the top of the page.
(10)	Message number, word number, and DFI/DUI number of the DFI/DUI appearing at the bottom of the current page.

APPENDIX D

D.5 DETAILED REQUIREMENTS

D.5.1 SYSTEM IMPLEMENTATION CODES

The definition of the implementation codes used in the MIL-STD-6016, Appendix D Classified Supplement depends upon the level (message, word, DFI/DUI, or DI) of Link 16 implementation within the system.

D.5.1.1 MESSAGE AND WORD LEVEL TRANSMIT CODES

- T - The system will transmit the indicated message or word.
- NT - The system will not originate the indicated message or word, but shall perform required receipt/compliance actions/responses.
- RT - The system will not originate the indicated message or word but shall retransmit it.
- TBD - To be determined.

D.5.1.2 DFI/DUI LEVEL TRANSMIT CODES

- T - The system will transmit the indicated DFI/DUI.
- NT - The system will not originate the indicated DFI/DUI, but shall perform required receipt/compliance actions/responses.
- RT - The system will not originate the indicated DFI/DUI but shall retransmit it.
- Tn - The system will originate only the specified data item value "n" for the DFI/DUI specified.
- T(n.n) - The system will originate all DI values as specified for the same DFI/DUI in the J(n.n) message.
- TBD - To be determined.

APPENDIX D

D.5.1.3 DI LEVEL TRANSMIT CODES

- T - The system will originate the DI value for the DFI/DUI specified.
- NT - The system will not originate the DI value for the DFI/DUI specified, but shall perform required receipt/compliance actions/responses.
- RT - The system will not originate the DI value for the specified DFI/DUI, but shall retransmit it.
- TBD - To be determined.

D.5.1.4 MESSAGE LEVEL RECEIVE CODES

- R - The system will process the indicated message.
- DM - The system will discard the entire message upon receipt, but shall perform required receipt/compliance actions/responses.
- TBD - To be determined.

D.5.1.5 WORD LEVEL RECEIVE CODES

- R - The system will process the indicated word.
- NP - The system will not process the indicated word but shall perform required receipt/compliance actions/responses. (The word level reception code NP is only valid following a message level or action value reception code of DM.)
- DM - The system will discard the entire message upon receipt of the indicated word, but shall perform required receipt/compliance actions/responses.
- DW - The system will discard the entire word upon receipt, but shall perform required receipt/compliance actions/responses.

APPENDIX D

TBD - To be determined.

D.5.1.6 DFI/DUI LEVEL RECEIVE CODES

- R - The system will process the indicated DFI/DUI.
- NP - The system will not process the indicated DFI/DUI but shall perform required receipt/compliance actions/responses.
- DM - The system will discard the entire message upon receipt of the indicated DFI/DUI, but shall perform required receipt/compliance actions/responses.
- DW - The system will discard the entire word upon receipt of the indicated DFI/DUI, but shall perform required receipt/compliance actions/responses.
- Rn - The system will process the indicated DFI/DUI as if specific DI value "n" has been received.
- R(n.n) - The system will process all DI values as specified for the same DFI/DUI in the J(n.n) message.

TBD - To be determined.

D.5.1.7 DI LEVEL RECEIVE CODES

- R - The system will process the indicated DI.
- NP - The system will not process the indicated DI but shall perform required receipt/compliance actions/responses.
- DM - The system will discard the entire message upon receipt of the indicated DI, but shall perform required receipt/compliance actions/responses.

APPENDIX D

DW - The system will discard the entire word upon receipt of the indicated DI, but shall perform required receipt/compliance actions/responses.

Rn - The system shall process the indicated DI as if specific DI value "n" had been received.

TBD - To be determined.

D.5.1.8 DATA FORWARDING CODES

F - The system will forward the indicated message.

N - The system will not forward the indicated message.

D.5.2 HIERARCHICAL DEPENDENCY OF IMPLEMENTATION CODES

A set of rules for the use of Link 16 implementation codes is necessary to ensure a common understanding of how each system implements a specific Link 16 data item. The To Be Determined (TBD) implementation code can be used at any time; it is valid under any other implementation code.

D.5.2.1 MESSAGE LEVEL TRANSMISSION CODE RULES

D.5.2.1.1 MESSAGE LEVEL CODE T

If the message level code is T, the Initial Word level implementation code must be T.

- a. Legal word level transmission codes are T, NT, or RT.
- b. Legal DFI/DUI level and DI level transmission codes include all codes.

APPENDIX D

D.5.2.1.2 MESSAGE LEVEL CODE NT

If the message level code is NT, all included word, DFI/DUI, and DI implementation codes must be NT.

D.5.2.1.3 MESSAGE LEVEL CODE RT

If the message level code is RT, one or more included word level implementations must indicate an implementation code of RT.

- a. Legal word level transmission codes are NT or RT.
- b. Legal DFI/DUI level transmission codes are NT or RT.
- c. Legal DI level transmission codes are NT or RT.

D.5.2.2 WORD LEVEL TRANSMISSION CODE RULES

D.5.2.2.1 WORD LEVEL CODE T

If the word level code is T, one or more included DFI/DUI level implementations must indicate an implementation code of T.

- a. Legal DFI/DUI level transmission codes include all codes, except NT.
- b. Legal DI level transmission codes include all codes.

D.5.2.2.2 WORD LEVEL CODE NT

If the word level code is NT, all included DFI/DUI and DI codes must be NT.

D.5.2.2.3 WORD LEVEL CODE RT

If the word level code is RT, one or more included DFI/DUI level implementations must indicate an implementation code of RT.

APPENDIX D

- a. Legal DFI/DUI level transmission codes are NT or RT.
- b. Legal DI level transmission codes are NT or RT.

D.5.2.3 DFI/DUI LEVEL TRANSMISSION CODE RULES

D.5.2.3.1 DFI/DUI LEVEL CODE T

If the DFI/DUI level code is T, a minimum of two DIs must indicate an implementation code of T. The legal DI level transmission codes are T, NT, or RT.

D.5.2.3.2 DFI/DUI LEVEL CODE NT

If the DFI/DUI level code is NT, all included DI level codes must be NT.

D.5.2.3.3 DFI/DUI LEVEL CODE RT

If the DFI/DUI level code is RT, one or more included DI implementations must indicate an implementation code of RT. The legal DI level transmission codes are NT or RT.

D.5.2.3.4 DFI/DUI LEVEL CODE TN

If the DFI/DUI level code is Tn, one included DI value implementation will be T and that DI value will be "n." The remainder of the included DI level transmission codes will be NT or RT.

D.5.2.3.5 DFI/DUI LEVEL CODE T(N.N)

If the DFI/DUI level code is T(n.n) there is no new listing of DI implementation codes. The DI transmission codes are as they were listed in message "J(n.n)."

APPENDIX D

D.5.2.4 MESSAGE LEVEL RECEPTION CODE RULES

D.5.2.4.1 MESSAGE LEVEL CODE R

If the message level code is R, the Initial Word Level implementation code must be R.

- a. Legal word level reception codes are R, DW, or DM.
- b. Legal DFI/DUI reception codes include all codes.
- c. Legal DI reception codes include all codes.

D.5.2.4.2 MESSAGE LEVEL CODE DM

If the message level code is DM, all included word, DFI/DUI, and DI implementation codes must be NP.

D.5.2.5 WORD LEVEL RECEPTION CODE RULES

D.5.2.5.1 WORD LEVEL CODE R

If the word level code is R, one or more included DFI/DUI implementations must indicate an implementation code of R.

- a. Legal DFI/DUI level reception codes are R, NP, Rn or R (n.n).
- b. Legal DI level reception codes include all codes.

D.5.2.5.2 WORD LEVEL CODE NP

The word level code NP is only valid when the message level or action value reception code is DM. If the word level code is NP, all included DFI/DUI and DI codes must be NP.

APPENDIX D

D.5.2.5.3 WORD LEVEL CODE DM

If the word level code is DM, all included DFI/DUI and DI codes must be NP.

D.5.2.5.4 WORD LEVEL CODE DW

If the word level code is DW, all included DFI/DUI and DI implementation codes must be NP.

D.5.2.6 DFI/DUI LEVEL RECEPTION CODE RULES

D.5.2.6.1 DFI/DUI LEVEL CODE R

If the DFI/DUI level code is R, a minimum of two DIs must indicate an implementation code of R. The legal DI level reception codes include all codes.

D.5.2.6.2 DFI/DUI LEVEL CODE NP

If the DFI/DUI level code is NP, all included DI codes must be NP.

D.5.2.6.3 DFI/DUI LEVEL CODE DM

If the DFI/DUI level code is DM, all included DI codes must be NP.

D.5.2.6.4 DFI/DUI LEVEL CODE DW

If the DFI/DUI level code is DW, all included DI codes must be NP.

D.5.2.6.5 DFI/DUI LEVEL CODE RN

If the DFI/DUI level code is Rn, one included DI value implementation will be R and that DI value will be "n." The remainder of the included DI values must be NP.

APPENDIX D

D.5.2.6.6 DFI/DUI LEVEL CODE R(N.N)

If the DFI/DUI level code is R(n.n), there is no new listing of DI implementation codes. The DI reception codes are as they were listed in message "J(n.n)."

D.5.2.7 ACTION VALUE RULESD.5.2.7.1 ACTION VALUE TRANSMISSION CODE RULES

a. If the action (DI) value implementation code is T, the Initial Word implementation code must be T. The remainder of the words in the message may show an implementation code of T, NT, or RT. The legal transmission codes for all included DFI/DUI and DI level implementations include all codes.

b. If the action (DI) value implementation code is NT, all included word, DFI/DUI, and DI codes must be NT.

c. It is not appropriate to show an action (DI) value implementation as RT.

D.5.2.7.2 ACTION VALUE RECEPTION CODE RULES

a. If the action (DI) value implementation code is R, the Initial Word implementation code must be R. The remainder of the words of the message may show an implementation code of R or DW. The legal reception codes for all included DFI/DUI and DI level implementations include all codes.

b. If the action (DI) value implementation code is NP, all included word, DFI/DUI, and DI codes must be NP.

c. It is not appropriate to show an action (DI) value implementation code of NP or DW.

d. If the action (DI) value implementation code is Rn, the implementation codes of all included word, DFI/DUI, and DI will be as depicted for action value "n."

APPENDIX D

D.5.2.8 FORWARDING CODE RULES

Rules for forwarding of Link 16 messages to JTA0 are considered at the message level only and are based on message reception (see MIL-STD-6016, Appendix C). For this reason Link 16 forwarding is shown only at the message level. An indication that a message is forwarded (F) obligates the system to forward all translatable words, DFI/DUIs, and DIs of that message regardless of system implementation. Any JU qualified as a forwarder must forward every message whose implementation for reception is R. If the message implementation for reception is NP, forwarding requirements are determined based on the Network Participation Group (NPG) on which the message is normally transmitted (see MIL-STD-6016, Section 4, Table 4.2-1) and the participation status of the impacted system on that NPG. The basic rule is that if the system participates on the NPG on which the message is normally transmitted (see MIL-STD-6016, Section 4, Table 4.2-1), the system is obligated to forward the message in accordance with Appendix C requirements.
